

Contents

<i>Preface</i>	xi
<i>List of Contributors</i>	xiii
1. Anatomical and Functional Diversity of Animal Eyes	1
<i>Elke K. Buschbeck</i>	
Physical Limits of Eye Designs	2
The Evolutionary Origin of Eyes	2
Diversity of Eye Types	4
Acknowledgments	5
References	5
2. The Simplest Eyes: Rhodopsin-mediated Phototaxis Reception in Microorganisms	6
<i>John L. Spudich, Elena N. Spudich</i>	
Introduction	6
Microbial Rhodopsins, A Large Family With Diverse Phototransducing Functions	7
Modes of Signaling by the Versatile Microbial Sensory Rhodopsins	8
Signaling to a Membrane-embedded Transducer in Haloarchaeal Prokaryotic Phototaxis	8
Signaling to a Cytoplasmic Transducer by a Cyanobacterial Sensory Rhodopsin	10
Light-gated Channel Activity in Chlamydomonas Phototaxis	11
Evolutionary Relationship Between Microbial Rhodopsins and Visual Pigments	12
Acknowledgments	12
References	12
3. The Planarian Eye: A Simple and Plastic System with Great Regenerative Capacity	15
<i>Emili Saló, Renata Batistoni</i>	
Introduction	15
Planarian Eyes	16
Technological Advances in Planarian Studies	17
Planarian Eye Regeneration: A Unique Model for the Study of Eye Organogenesis	18

Eye Cell Specification in Planarians: Identifying Planarian Members of the Retinal Determination Gene Network	21
Conclusions and Future Prospects	23
Acknowledgments	24
References	24
 4. Development of the <i>Drosophila melanogaster</i> Eye: from Precursor Specification to Terminal Differentiation	27
<i>Simon G. Sprecher, Claude Desplan</i>	
Introduction	27
<i>Drosophila</i> as A Model System	27
Anatomy and Morphology of the <i>Drosophila</i> Eye	29
Early Development and Specification of Eye Precursor Cells	29
Embryonic Origin of the Eye	30
Early Development of the Eye-antennal Disc: Specification of Eye Versus Antenna	30
The Retinal Determination Network (RDN) Provides the Basis for Eye Formation	31
Function of the RDN	31
Evolutionary Conservation of the RDN	33
The Morphogenetic Furrow and the Specification of Photoreceptor and Accessory Cells	34
Initiation of the Morphogenetic Furrow	34
The Starting Point in Ommatidia Development: Specification of the R8 Photoreceptor Precursor	36
Recruitment and Specification of R1-R7	37
Cell-cycle Control and Apoptosis in the Eye	38
Planar Cell Polarity	39
Terminal Differentiation and Subtype Specification of Photoreceptors	40
Different Ommatidia Subtypes	40
Specification of Inner Versus Outer Photoreceptors	41
Making Inner Photoreceptors to R7 and R8 cells	41
Stochastic Specification of Yellow Versus Pale Ommatidia	42
Developmental Choice to Specify Yellow Versus Pale R8 Photoreceptors	42
Specification of Inner Photoreceptors in the Dorsal Rim Area (DRA)	42
Development and Specification of the Larval Eye	43
Acknowledgments	44
References	44
 5. The Antarctic Toothfish: A New Model System for Eye Lens Biology	48
<i>Andor J. Kiss</i>	
The Antarctic Environment	48
Toothfish Biology	49
Lens Biochemistry	50

Lens Crystallin cDNA Sequences	52
Other Aspects of Toothfish Eye Biology	53
Strengths of the Toothfish as a Model System	53
References	54
 6. <i>Xenopus</i>, an Ideal Vertebrate System for Studies of Eye Development and Regeneration	57
<i>Jonathan J. Henry, Jason M. Wever, M. Natalia Vergara, Lisa Fukui</i>	
Introduction	58
History of <i>Xenopus</i> as a Model System for Cell, Developmental and Molecular Biology	58
<i>Xenopus tropicalis</i> : An Emerging Genetic System	59
Technical Advantages of <i>Xenopus</i> as a Model System	59
Basic Biology and Development	59
Tools for Molecular Level Analyses	60
Transgenesis in <i>Xenopus</i>	61
Overview of Eye Development, Anatomy and Morphology	62
Embryonic Origins of Eye Tissues in <i>Xenopus</i> (Cell Lineage Analyses)	62
Early Stages of Eye Development	63
Development of the Lens	65
Analyses of Crystallin Expression During Lens Development	66
Development of the Retina	66
Development of the Cornea and Other Eye Tissues	67
Inductive Interactions in Eye Development	67
Embryonic Lens Induction	67
Induction of the Retina	70
Contributions to our Understanding of the Molecular Basis of Eye Development	70
Molecular Level Control of Retinal Development	70
Molecular Level Control of Lens Development	74
The Process of Lens Regeneration in <i>Xenopus</i>	76
Overview of Lens Regeneration	76
Analyses of Crystallin Expression During Lens Regeneration	78
Contributions to Our Understanding of the Molecular Basis of Lens Regeneration in <i>Xenopus</i>	79
Functional Studies with cDNA Library Clones	80
Regeneration of the Neural Retina in <i>Xenopus</i>	81
Overview of Retinal Regeneration	81
<i>In Vivo</i> Studies: Ablation of Eye Fragments in <i>Xenopus</i> Tadpoles.	
Healing Modes and Their Correlation to the Patterning of Retino-tectal Projections	81
Axotomy in <i>Xenopus</i> Tadpoles: Optic Nerve Regeneration and Ganglion Cell Number	82
Retinal Ablation and Eye Restoration in Post-metamorphic Frogs: Sources of New Retinal Cells	82
Potential of the Pigmented Eye Tissues to Transdifferentiate into Neural Retina: Experiences from <i>In Vitro</i> Culture and Transplantation Experiments	83

Future Directions	84
Acknowledgments	84
References	84
7. The Newt as a Model for Eye Regeneration	93
<i>Meagan Roddy, Panagiotis A. Tsonis</i>	
Background	93
Retina Regeneration	94
Gene Regulation	96
Lens Regeneration	96
Gene Regulation	97
MicroRNAs	98
Transdifferentiation in Newts: A Model for Stem Cell Differentiation?	99
Immunity and Regulation	99
The Promise of the Newt	100
References	100
8. The Chick as a Model for Retina Development and Regeneration	102
<i>Teri L. Belecky-Adams, Tracy Haynes, Jonathan M. Wilson, Katia Del Rio-Tsonis</i>	
The Chick Embryo as a Model System	102
Introduction	102
The Advantages of the Chick Embryo	103
The Embryonic Chick Toolbox	105
Chick Retina Regeneration	108
Introduction	108
Regeneration by Stem/progenitor Cell Activation	109
Regeneration by Transdifferentiation	110
Using the Embryonic Chick Eye to Probe for Retina Repair Potential of Mammalian Cells	113
The Post-hatch Chick and Its Potential Sources of Retina Repair	113
Conclusion	114
Acknowledgments	114
References	114
9. Eye Development Using Mouse Genetics	120
<i>Ni Song, Richard A. Lang</i>	
Introduction	120
Naturally Occurring Mutants	121
Transgenic Mouse Lines	122
Gene Targeting	123
The Germ Line Null Allele	123
The Conditional Allele	125

Heterologous Gene Expression via "Knock-in"	125
Temporal Control	126
Hormone-regulated Protein Activity	126
The GAL4/UAS System for Transcriptional Control	127
Tetracycline-regulated Transcriptional Control	127
The LacO/LacIR System for Transcriptional Control	127
Forward Genetics in the Mouse	128
Gene Trapping	128
Chemical Mutagenesis Screens	128
Concluding Comments	130
References	130
10. Epithelial Explants and Their Application to Study Developmental Processes in the Lens	134
<i>E.J. Lovicu, J.W. McAvoy</i>	
Introduction	134
Lens Morphogenesis, Differentiation and Growth	135
Development of Explant Models	136
Preparation of Lens Epithelial Explants	137
Choice of Animals	137
Setting Up for the Explant Procedure	138
Collection of Lens Tissue	139
Isolating the Lens Epithelium	141
Securing the Lens Explant	143
Variations on a Theme	143
Processing Explants for Analysis	144
Light Microscopy Applications	145
Electron Microscopy Applications	145
Future Perspectives	145
References	146
11. Mouse Models of the Cornea and Lens: Understanding Ocular Disease	148
<i>Satori A. Marchitti, J. Bronwyn Bateman, J. Mark Petrash, Vasilis Vasiliou</i>	
Introduction	148
Mouse Models of the Cornea	149
Mouse Models of Corneal Development and Disease	149
Corneal Crystallins and Relevant Mouse Models	152
Mouse Models of the Lens	155
Transgenic Lens Models	155
Single Gene Mouse Models of Cataract Formation	157
Concluding Remarks	165
Acknowledgments	165
References	165

12. Deciphering Irradiance Detection in the Mammalian Retina	173
<i>Robert J. Lucas, Daniela Vallone, Nicholas S. Foulkes</i>	
Introduction	173
Circadian Clock Entrainment	174
The Pupillary Light Reflex (PLR)	174
Masking	174
Melatonin Suppression	174
Irradiance Detection in other Vertebrates	175
Rodless Coneless Mice	175
ipRGCs	176
<i>Xenopus</i> Melanophores: the Discovery of Melanopsin	176
Melanopsin-knockout Mice	178
Role of Rods and Cones in Irradiance Detection	178
Is Melanopsin a Photopigment?	178
ipRGCs, Melanopsin and Early Development	180
Evolutionary Perspectives and Concluding Remarks	181
Acknowledgments	181
References	181
13. The Rabbit in Cataract/IOL Surgery	184
<i>Arlene Gwon</i>	
Introduction	184
Rabbit Eye Anatomy: Comparisons and Contrasts with the Human Eye	184
Use of the Rabbit in Ocular Surgery Research	187
Lens/Cataract Surgery	187
IOL Biocompatibility	190
Posterior Capsule Opacification	191
Accommodating IOL	196
Lens Refilling	197
Lens Regeneration	197
Summary	199
References	199
14. The Primate in Cataract/IOL Surgery	205
<i>Arlene Gwon</i>	
Introduction	205
Lens/cataract Surgery	205
Accommodation	206
Summary	207
References	207
<i>Index</i>	209
