Chapter 1	Methods and Parameters for Membrane Simulations	1
	<i>D. Peter Tieleman</i>	
1.1	Introduction	1
1.2	Force Fields/Descriptions of Interactions	4
1.2.1	Current Atomistic Force Fields	5
1.2.2	Development of Force Field Parameters	6
1.2.3	Issues with Combining Force Fields	7
1.3	Starting Structures	7
1.3.1	Bilayers	8
1.3.2	Membrane Proteins	9
1.3.3	Embedding Proteins in Bilayers	9
1.4	Sampling	11
1.4.1	Improving Sampling	14
1.4.2	Coarse Graining	14
1.5	Pressure Coupling	16
1.6	Electrostatics	18
1.7	Periodicity	19
1.8	Future Developments	20
	Acknowledgements	21
	References	21
Chapter 2	Lateral Pressure Profiles in Lipid Membranes: Dependence on Molecular Composition	26
	<i>O. H. Samuli Ollila and Ilpo Vattulainen</i>	
2.1	Introduction	26
2.2	Theoretical Concepts	31
2.2.1	Lateral Pressure Profile	31
2.2.2	Calculation of Lateral Pressure Profile from Simulation	32

RSC Biomolecular Sciences No. 20

Molecular Simulations and Biomembranes: From Biophysics to Function

Edited by Mark S.P. Sansom and Philip C. Biggin

© Royal Society of Chemistry 2010

Published by the Royal Society of Chemistry, www.rsc.org

2.2.3	Elastic Properties	33
2.2.4	Interplay of Pressure Profile and Membrane Protein Activation	34
2.3	Gauging Pressure Profile	35
2.4	Dependence of Pressure Profiles on Molecular Composition	38
2.4.1	Dependence on Unsaturation Level	38
2.4.2	Effects of Different Sterols in Two-component Membranes	39
2.4.3	Pressure Profiles in Three-component Bilayers	41
2.4.4	Implications of Anesthetics on Pressure Profile	43
2.4.5	Elastic Properties Calculated from Lateral Pressure Profile	45
2.4.6	Free Energy of Protein Activation and Lateral Pressure Profile	48
2.5	Concluding Remarks	50
2.6	Abbreviations	51
	Acknowledgements	51
	References	51

Chapter 3 Coarse-grained Molecular Dynamics Simulations of Membrane Proteins 56

Sarah Rouse, Timothy Carpenter and Mark S. P. Sansom

3.1	Introduction	56
3.2	Coarse-grained Simulations: Methodology	57
3.2.1	CG-MD and Lipid Bilayers	57
3.2.2	CG-MD and Membrane Peptides and Proteins	59
3.3	Evaluation of CG-MD: Model Membrane Peptides	61
3.4	Simulation Studies of Membrane Peptide Oligomerization	64
3.4.1	Glycophorin A	64
3.4.2	Influenza M2 Channels	66
3.5	Coarse-grained MD: Larger Systems	67
3.5.1	Vesicle Simulations	67
3.5.2	More Complex Membrane Proteins	69
3.6	Concluding Remarks and Future Directions	73
	Acknowledgements	73
	References	73

Chapter 4	Passive Permeation Across Lipid Bilayers: a Literature Review	76
	<i>Mario Orsi and Jonathan W. Essex</i>	
4.1	Introduction	76
4.2	Experimental Methods	78
4.2.1	Water and Small Organic Molecules	78
4.2.2	Drugs	78
4.3	The Solubility-Diffusion Model	80
4.3.1	The z -Constraint Method	81
4.4	Small Molecules	82
4.5	Drugs	83
4.6	Fullerene	85
4.7	Discussion	87
4.8	Conclusions	87
	References	88
Chapter 5	Implicit Membrane Models For Peptide Folding and Insertion Studies	91
	<i>Martin B. Ulmschneider and Jakob P. Ulmschneider</i>	
5.1	Introduction	91
5.2	Implicit Membrane Models	94
5.2.1	Overview	94
5.2.2	Implicit Membrane Models for Studying Membrane Protein Folding	95
5.2.3	The Generalized Born Model	96
5.2.4	Non-polar Interactions	99
5.2.5	Accuracy and Partitioning Properties	100
5.2.6	Transmembrane and Surface-bound Helices, Insertion Energy Landscape	102
5.2.7	Thermodynamic Analysis	102
5.3	Simulating Peptide Folding and Partitioning	104
5.3.1	Summary	104
5.3.2	Transbilayer Peptide Folding	104
5.3.3	Peptide Adsorption, Insertion and Folding	111
5.3.4	Comparison with Explicit Methods	124
5.3.5	Sampling Performance	128
5.3.6	Conclusions	134
	Acknowledgements	135
	References	135

Chapter 6	Multi-scale Simulations of Membrane Sculpting by N-BAR Domains	146
	<i>Ying Yin, Anton Arkhipov and Klaus Schulten</i>	
6.1	Introduction	146
6.2	Methods	148
6.3	All-atom Simulations	150
6.4	Residue-based Coarse-grained Simulations	151
6.5	Shape-based Coarse-grained Simulations	152
6.6	Continuum Elastic Membrane Model	157
6.7	Results and Discussion	159
6.8	Simulations of a Single N-BAR Domain	159
6.9	Comparison of RBCG and SBCG Simulations for Systems with Six N-BAR Domains	161
6.10	Effect of Different N-BAR Domain Lattices on Membrane Curvatures	164
6.11	Comparing All-atom and SBCG Simulations of an N-BAR Domain Lattice	167
6.12	Complete Membrane Tubulation by Lattices of BAR Domains	169
6.13	Elastic Membrane Computations	169
6.14	Conclusion	172
	Acknowledgements	173
	References	173
Chapter 7	Continuum Electrostatics and Modeling of K^+ Channels	177
	<i>Janice L. Robertson, Vishwanath Jogini and Benoît Roux</i>	
7.1	Introduction	177
7.2	Theory and Methods	180
7.2.1	The Poisson–Boltzmann (PB) Equation	180
7.2.2	Calculation of Electrostatic Free Energies and Decomposition	181
7.2.3	The Modified PB Equation for Treatment of Transmembrane Voltage	182
7.3	Applications	184
7.3.1	Electrostatics in the Intracellular Vestibule of K^+ Channels	184
7.3.2	Long-pore Electrostatics in K^+ Channels	191
7.3.3	K^+ Channels and the Transmembrane Potential	195
7.4	Conclusion	200
	References	201

Chapter 8	Computational Approaches to Ionotropic Glutamate Receptors	203
	<i>Ranjit Vijayan, Bogdan Iorga and Philip C. Biggin</i>	
8.1	Introduction	203
8.2	The Amino-terminal Domain	205
8.3	The Ligand-binding Domain (LBD)	207
8.3.1	Selectivity and Modulation	207
8.3.2	Dynamics	209
8.4	The Transmembrane Domain	216
8.5	Conclusion	218
	Acknowledgements	218
	References	218
Chapter 9	Molecular Dynamics Studies of Outer Membrane Proteins: a Story of Barrels	225
	<i>Syma Khalid and Marc Baaden</i>	
9.1	Introduction	225
9.2	Outer Membrane Proteins	226
9.3	Simple Barrels	227
9.3.1	OmpA and Its Homologues	227
9.3.2	Simple OMPs in Diverse Environments	230
9.4	Leaking Barrels	232
9.5	Transporting Barrels	232
9.5.1	TonB-dependent Transporters	233
9.5.2	Autotransporters	235
9.5.3	TolC	237
9.6	Reacting Barrels	239
9.7	Technological Barrels	241
9.8	Conclusion	243
	Acknowledgements	244
	References	244
Chapter 10	Molecular Mechanisms of Active Transport Across the Cellular Membrane	248
	<i>Po-Chao Wen, Zhijian Huang, Giray Enkavi, Yi Wang, James Gumbart and Emad Tajkhorshid</i>	
10.1	Introduction	248
10.2	Computational Methodology	250
10.2.1	Electrostatic Potential Calculation	251
10.2.2	Net Charge Density Distribution Calculation	251
10.3	ATP-driven Transport in ABC Transporters	252

10.4	Ion-driven Neurotransmitter Uptake by the Glutamate Transporter	258
10.5	Substrate Binding and Selectivity in Glycerol-3-Phosphate Transporter	263
10.6	Membrane Potential-driven Nucleotide Exchange in ADP/ATP Carrier	268
10.7	Mechanically Driven Transport Across the Outer Membrane	272
10.8	Conclusion	277
	Acknowledgements	278
	References	278
Chapter 11	Molecular Dynamics Studies of the Interactions Between Carbon Nanotubes and Biomembranes	287
	<i>E. Jayne Wallace and Mark S. P. Sansom</i>	
11.1	Introduction	287
11.1.1	Carbon Nanotube Structure	288
11.1.2	Experimental Techniques for Studying CNTs in a Biological Environment	289
11.2	Molecular Dynamics Simulations	289
11.2.1	Methodology	290
11.2.2	Parameterization of CNT Models	290
11.3	CNT Interactions with Lipids and Related Molecules	292
11.4	Interaction of CNTs with Lipid Bilayers	296
11.5	CNTs as Nanopores	298
11.5.1	Transport of Water and Ions Through CNT Nanopores	299
11.5.2	Nanopores as Nanosyringes	301
11.6	Conclusion	302
	References	302
