

# brief contents

Preface ix

## part one

### Introduction 1

- |                              |    |
|------------------------------|----|
| 1 Overview of Human Genetics | 1  |
| 2 Cells                      | 13 |
| 3 Human Development          | 39 |

## part two

### Transmission Genetics 65

- |                                              |     |
|----------------------------------------------|-----|
| 4 Mendel's Laws                              | 65  |
| 5 Extensions and Exceptions to Mendel's Laws | 85  |
| 6 Matters of Sex                             | 101 |
| 7 Complex Traits                             | 119 |

## part three

### DNA and Chromosomes 135

- |                                 |     |
|---------------------------------|-----|
| 8 DNA Structure and Replication | 135 |
| 9 Gene Function                 | 155 |
| 10 Gene Mutation                | 177 |
| 11 Cytogenetics                 | 197 |

## part four

### Population Genetics 219

- |                                        |     |
|----------------------------------------|-----|
| 12 When Gene Frequencies Stay Constant | 219 |
|----------------------------------------|-----|

- |                              |     |
|------------------------------|-----|
| 13 Changing Gene Frequencies | 233 |
|------------------------------|-----|

- |                                |     |
|--------------------------------|-----|
| 14 Human Origins and Evolution | 253 |
|--------------------------------|-----|

## part five

### Immunity and Cancer 271

- |                         |     |
|-------------------------|-----|
| 15 Genetics of Immunity | 271 |
| 16 Genetics of Cancer   | 293 |

## part six

### Genetic Technology 309

- |                                                 |     |
|-------------------------------------------------|-----|
| 17 Genetic Engineering                          | 309 |
| 18 Gene and Protein Therapy                     | 325 |
| 19 Agricultural and Environmental Biotechnology | 341 |
| 20 Reproductive Technologies                    | 357 |
| 21 The Human Genome Project                     | 373 |

- |                                     |     |
|-------------------------------------|-----|
| Answers to End-of-Chapter Questions | 387 |
|-------------------------------------|-----|

- |          |     |
|----------|-----|
| Glossary | 401 |
|----------|-----|

- |         |     |
|---------|-----|
| Credits | 411 |
|---------|-----|

- |       |     |
|-------|-----|
| Index | 413 |
|-------|-----|

# contents

Preface ix

## part one Introduction 1

### Chapter 1

#### Overview of Human Genetics 1

A Look Ahead 2

Genetics in the News 2

Establishing Identity 3

Agriculture 3

Defining Race 3

Health Care 5

Levels of Genetic Investigation 6

Molecules and Cells 6

Individuals and Families 7

Populations 8

The Abnormal Explains the Normal 8

The Effects of Other Genes and the Environment 10

The Genetic Components of Common Disorders 10

Genes Affect Responses to the Environment 10

How Do Genes Mold Traits? 11

### Chapter 2

#### Cells 13

Molecular Medicine 14

Conquering Cystic Fibrosis 14

Why Study Cells? 14

Cell Composition 16

Cell Complexity 18

Prokaryotic Cells 18

Archaeal Cells 20

Eukaryotic Cells 20

Organelles 22

Secretion—The Eukaryotic Production Line 22

Energy Production—

The Mitochondria 23

Packets of Enzymes—Lysosomes and Peroxisomes 23

The Cytoskeleton 25

Hereditary Spherocytosis 25

The Muscular Dystrophies 27

Cell-Cell Interactions 27

Signal Transduction 27

Cell Adhesion 28

Coordination of Cell Division and Cell Death 29

The Cell Cycle 29

Interphase—The Cell Prepares 30

Mitosis—The Cell Divides 30

Control of the Cell Cycle 32

A Cellular Clock—Chromosome

Ends 32

Signals from Outside the Cell 32

Signals from Inside the Cell 33

Integrating Cell Function 33

### Chapter 3

#### Human Development 39

Genes Operate Throughout Life 40

The Reproductive System 40

The Male 40

The Female 40

Meiosis 42

Stages of Meiosis 42

Meiosis and Genetic Variability 45

Gamete Maturation 47

Sperm Development 47

Ovum Development 49

Prenatal Development 50

Fertilization 50

Cleavage and Implantation 50

The Embryo Forms 50

Supportive Structures 50

The Embryo Develops 56

The Fetus 56

Birth Defects 57

The Critical Period 57

Teratogens 58

Maturation and Aging 60

Accelerated Aging Disorders 62

Is Longevity Inherited? 62

## **part two**

### **Transmission Genetics 65**

## **Chapter 4**

### **Mendel's Laws 65**

Thoughts About Genetics Through History—  
and Before 66

Following the Inheritance of One Gene—  
Segregation 67

Terms Used to Describe Single  
Genes 69

Mendel's Laws and Meiosis 70

Single Mendelian Traits in Humans 71

Modes of Inheritance 71

Pedigree Analysis 74

Evolving Technology 77

Following the Inheritance of Two Genes—  
Independent Assortment 78

Using Probability to Analyze More  
than Two Genes 80

## **Chapter 5**

### **Extensions and Exceptions to Mendel's Laws 85**

A Family With Tourette Syndrome 86

When Gene Expression Appears to Alter  
Mendelian Ratios 86

Lethal Allele Combinations 86

Multiple Alleles 86

Different Dominance Relationships 87

Epistasis—When One Gene Masks  
Expression of Another 87

Penetrance and Expressivity 88

Pleiotropy—One Gene, Many  
Effects 88

Phenocopies—When It's Not in the  
Genes 89

Genetic Heterogeneity—More than  
One Way to Inherit a Trait 90

When Mendel's Laws Do Not Apply 90

Maternal Inheritance and  
Mitochondrial Genes 90

An Exception to Segregation—  
Uniparental Disomy 93

Linkage 94

## **Chapter 6**

### **Matters of Sex 101**

The Different Levels of Sexual Identity 102

Sexual Development 102

Sex Chromosomes 102

SRY Gene Action Begins Sexual  
Differentiation 103

The Phenotype Forms 103

Gender Identity—Is Homosexuality  
Inherited? 104

Sex-linked Recessive Inheritance 105

Sex-linked Dominant Inheritance 111

X Inactivation—Equaling Out the Sexes 111

Gender Effects on Phenotype 114

Sex-limited Traits 114

Sex-influenced Traits 114

Genomic Imprinting 114

## **Chapter 7**

### **Complex Traits 119**

"It Runs in the Family" 120

Measuring Multifactorial Traits 121

Empiric Risk 121

Heritability—The Genetic Contribution  
to a Trait 122

Coefficient of Relationship 123

Studying Multifactorial Traits 124

Adopted Individuals 124

Twins 124

Some Complex Traits 126

Cardiovascular Disease 126

Obesity 127

Intelligence 128

Narcolepsy 129

Schizophrenia 129

Alcoholism 130

Behavioral Genetics 131

## **part three**

### **DNA and Chromosomes 135**

## **Chapter 8**

### **DNA Structure and Replication 135**

A Multitalented Molecule 136

Experiments Identify and Describe the  
Genetic Material 137

DNA Is the Hereditary Molecule 137

DNA Is the Hereditary Molecule—And  
Protein Is Not 138

Deciphering the Structure of  
DNA 139

Gene and Protein—An Important  
Partnership 141

The DNA Base Sequence Encodes  
Information 141

DNA Is Directional 141

DNA Is Highly Coiled 142

DNA Replication—Maintaining Genetic  
Information 142

Replication Is Semiconservative 142

Steps and Participants in DNA  
Replication 146

DNA Repair 149

Three Types of DNA Repair 149

DNA Repair Disorders 150

## **Chapter 9**

### **Gene Function 155**

Anatomy of an Illness 156

Transcription—Gene Expression Begins 156

What Is RNA? 156

The Complexity of Transcription 156

Control of Transcription 157

Initiation of Transcription 159

Building an RNA Chain 159

Types of RNA 162

Messenger RNA (mRNA) Carries the  
Genetic Information 162

Transfer and Ribosomal RNAs Help  
Translate the Message 163

After Transcription—RNA Is Processed,  
Spliced, and Edited 163

Messenger RNA Processing 163

Genes in Pieces 163

RNA Editing 164

Translation—Expressing Genetic  
Information 164

The Genetic Code—From Genetic  
Message to Protein Product 165

Building a Protein 170

Protein Folding 170

Computers Coax Meaning from Genes 172

## **Chapter 10**

### **Gene Mutation 177**

Discovering Mutations that Cause Alzheimer  
Disease 178

Of Mutants and Mutations 178

A Long-Known Mutation—Sickle Cell  
Disease 179

Spontaneous Mutation 182

Spontaneous Mutation Rate 183

Mutational Hot Spots 184

Induced Mutations 185

Mutagens 185

Accidental Exposures to  
Mutagens 185

Engineered Mutation 186

- Natural Protection Against Mutation 187
  - The Genetic Code 187
  - Position in the Protein 187
  - Recessive Inheritance Protects 187
  - Conditional Mutations 187
- Types of Mutations 187
  - Somatic Versus Germinal Mutations 187
  - Point Mutations 188
  - Altering the Number of DNA Bases 190
  - Movable Genes 192

## Chapter 11

### Cytogenetics 197

- Portrait of a Chromosome 198
- Visualizing Chromosomes 199
  - Obtaining Cells for Chromosome Study 199
  - Preparing Cells for Chromosome Observation 200
- Information from Chromosomes 204
- Abnormal Chromosome Number 205
  - Polyploidy 205
  - Aneuploidy 206
  - Sex Chromosome Aneuploids 209
- Deletions, Duplications, and Rearrangements 211
  - Translocations 211
  - Inversions 214
  - Isochromosomes 214
  - Ring Chromosomes 214

## part four

### Population Genetics 219

## Chapter 12

### When Gene Frequencies Stay Constant 219

- DNA Fingerprinting Relies on Population Genetics 220
- A Population View of the Gene 221
- Changing Gene Frequencies Underlie Evolution 222
- Hardy-Weinberg Equilibrium—An Overview 222
- Demonstrating Hardy-Weinberg Equilibrium 223
- Calculating Carrier Frequency from Disease Incidence 223

### Applications of Hardy-Weinberg Equilibrium 224

- Autosomal Recessive Traits and Disorders 224
- Sex-linked Recessive Traits 224
- Approximations for Very Rare Inherited Diseases 225
- DNA Polymorphisms 225
- DNA Fingerprinting—A Practical Test of Hardy-Weinberg Assumptions 225
  - DNA Patterns Distinguish Individuals 225
  - Population Statistics Are Used to Interpret DNA Fingerprints 226
  - A Call for Ethnic Databases 228

## Chapter 13

### Changing Gene Frequencies 233

- Genes and Human Behavior 234
- Nonrandom Mating 234
  - Consanguinity 235
- Migration 236
  - Historical Clues 236
  - Geographical and Linguistic Clues 236
- Genetic Drift 236
  - The Afrikaners Demonstrate the Founder Effect 237
  - Population Bottlenecks 237
- Mutation 238
- Natural Selection 239
  - Tuberculosis Ups and Downs—And Ups 239
  - Evolving HIV 240
  - Balanced Polymorphism 242
- Gene Genealogy 245
  - PKU Revisited 245
  - CF Revisited 245
- Applications of Population Genetics 247
  - Tracing African Heritage 247
  - Defining Human Races 247

## Chapter 14

### Human Origins and Evolution 253

- Fractured Fairytales and Human Origins 254
  - The Hominoids 254
  - The Hominids 255
  - Modern Humans 256
- Molecular Evolution 257
  - Comparing Chromosomes 257
  - Comparing Protein Sequences 257

### DNA Hybridization—Comparing DNA Sequences 259

- Molecular Clocks 260
  - From Sequence Differences to Evolutionary Trees 261
  - Mitochondrial DNA Clocks 261
  - Using the Y Chromosome to Trace Paternal Lineage 264
- Eugenics 264
  - Eugenics Early in the Twentieth Century 264
  - Eugenics in the 1990s 265

## part five

### Immunity and Cancer 271

## Chapter 15

### Genetics of Immunity 271

- The Gift of Life 272
- Normal Immunity 272
  - Self Cell Surfaces 272
  - An Overview of Immunity—Structures and Functions 275
  - The Humoral Immune Response 276
  - The Cellular Immune Response 278
- Abnormal Immunity 280
  - Inherited Immune Deficiencies 280
  - Acquired Immune Deficiency Syndrome (AIDS) 281
  - Autoimmunity 284
  - Allergies 284
- Transplantation and Tissue Rejection 285
  - Transplant Types 285
  - Rejection Reactions 285
  - Cell Implants 287
- Immunotherapy 287
  - Boosting Humoral Immunity—Monoclonal Antibody Technology 287
  - Boosting Cellular Immunity—Harnessing Cytokines 289

## Chapter 16

### Genetics of Cancer 293

- Cancer as a Genetic Disorder 294
  - Cancer—A Loss of Cell Cycle Control 294
  - Inherited versus Sporadic Cancer 295
- Characteristics of Cancer Cells 296
- Genes that Cause Cancer 298
  - Oncogenes 298
  - Tumor Suppressors 299

- A Series of Genetic Changes Causes Some Cancers 304  
 A Rapidly Growing Brain Tumor 304  
 Colon Cancer 304

## part six Genetic Technology 309

### Chapter 17

#### Genetic Engineering 309

- Biotechnology 310  
 Recombinant DNA Technology 311  
   Constructing Recombinant DNA Molecules 312  
   Applications of Recombinant DNA Technology 314  
 Transgenic Organisms 316  
   Delivering DNA 316  
   Transgenic Pioneers—Nancy, Ethel, and Herman 317  
 Gene Targeting 319  
   Knocking Out Gene Function 320  
   Knockout Mice as Models 320  
   When Knockouts Are Normal 321

### Chapter 18

#### Gene and Protein Therapy 325

- The Evolution of a Cure 326  
 Types of Gene Therapy 327  
   Treating the Phenotype—A Short-term Solution 327  
   Somatic versus Germline Gene Therapy 328  
 The Mechanics of Gene Therapy 329  
   Gene Vectors 329  
   Introducing Vectors 330  
 Sites of Gene Therapy 331  
   Stem Cells 331  
   Endothelium—Gateways to the Bloodstream 332  
   Skin 332  
   Muscle 332  
   The Liver 333  
   The Lungs 333  
   Nerve Tissue 333

- Gene Therapy Against Cancer 335  
   Molecular Surgery—Targeting Brain Tumors 335  
   Cancer Vaccines 336  
 Perspective: A Slow Start, But Great Promise 337

### Chapter 19

#### Agricultural and Environmental Biotechnology 341

- Not Your Average Salad Bar 342  
 Economic, Ecological, and Evolutionary Concerns 342  
 Traditional Breeding versus Biotechnology 343  
 Transgenic Technology in Plants 345  
   Gene Transfer in Dicots and Monocots 345  
   Applications of Transgenic Plants 346  
 Altering Plants at the Cellular Level 347  
   Protoplast Fusion 348  
   Callus Culture 348  
 Biotechnology Provides Different Routes to Solving a Problem 349  
 Release of Genetically Engineered Organisms to the Environment 351  
   Field Tests 351  
   Microcosm Experiments 351  
   Bioremediation 352  
 Conserving Genetic Resources 352  
   Cell and Seed Banks 352  
   Complex Traits Revisited 353

### Chapter 20

#### Reproductive Technologies 357

- New Ways to Make Babies 358  
   A Grandmother and Mother at the Same Time 358  
   Midlife Motherhood 358  
   A Five-Year Wait 358  
 Infertility 358  
   Male Infertility 359  
   Female Infertility 360  
   Infertility Tests 362

- Assisted Reproductive Technologies 363  
   Donated Sperm—Artificial Insemination 363  
   A Donated Uterus—Surrogate Motherhood 365  
   In Vitro Fertilization 365  
   Gamete Intrafallopian Transfer 366  
   Oocyte Banking and Donation 367  
   Preimplantation Genetic Screening 368

### Chapter 21

#### The Human Genome Project 373

- Why Sequence Genomes? 374  
 Roots of the Human Genome Project 376  
   An Overview of the Project 376  
   The Human Genome Project Timetable 376  
 A Genome Project Progress Report 377  
   What Is a Gene? 377  
   How Many Genes Comprise the Human Genome? 378  
   How Are Genes Functionally Distributed? 379  
 Huntington Disease Research Illustrates the Evolution of Genome Technology 380  
   Beginnings in a Venezuelan Village 380  
   Finding the HD Marker 380  
   Localizing a Gene 382  
   Identifying a Gene 382  
 Preventing Genetic Discrimination 384  
 Epilogue 384

#### Answers to End-of-Chapter Questions 387

#### Glossary 401

#### Credits 411

#### Index 413
