Preface ix
Guided Tour xii

CHAPTER 1

The Main Themes of Microbiology 1

- 1.1 The Scope of Microbiology 2
- 1.2 The Origins of Microorganisms and Their Roles in the Earth's Environments 4
 - Microbial Involvement in Energy and Nutrient Flow 4
- 1.3 Human Use of Microorganisms 7
- 1.4 Infectious Diseases and the Human Condition 7
- 1.5 The General Characteristics of Microorganisms 9
 - Cellular Organization 9
 - Microbial Dimensions: How Small Is Small? 11
 - Lifestyles of Microorganisms 12
- 1.6 The Historical Foundations of Microbiology 13
 - The Development of the Microscope: "Seeing Is Believing" 13
 - The Establishment of the Scientific Method 15
 - The Development of Medical Microbiology 15
 - The Discovery of Spores and Sterilization 15
- 1.7 Taxonomy: Organizing, Classifying, and Naming Microorganisms 18
 - The Levels of Classification 18
 - Assigning Specific Names 18
 - The Origin and Evolution of Microorganisms 20
 - Systems of Presenting a Universal Tree of Life 20

CHAPTER 2

The Chemistry of Biology 27

- 2.1 Atoms, Bonds, and Molecules: Fundamental Building Blocks 28
 - Different Types of Atoms: Elements and Their Properties 29
 - The Major Elements of Life and Their Primary Characteristics 29
 - Bonds and Molecules 32
 - Solutions: Homogeneous Mixtures of Molecules 37
- 2.2 Macromolecules: Superstructures of Life 41
 - Carbohydrates: Sugars and Polysaccharides 41
 - Lipids: Fats, Phospholipids, and Waxes 45
 - Proteins: Shapers of Life 47
 - The Nucleic Acids: A Cell Computer and Its Programs 48
 - The Double Helix of DNA 50

CHAPTER 3

Tools of the Laboratory: The Methods for Studying Microorganisms 57

- 3.1 Methods of Culturing Microorganisms—The Five I's 58
 - Inoculation: Producing a Culture 58
 - Isolation: Separating Microbes from One Another 58
 - Media: Providing Nutrients in the Laboratory 60
 - Incubation and Inspection 68
 - Identification 69
- 3.2 The Microscope: Window on an Invisible Realm 70
 - Magnification and Microscope Design 71
 - Variations on the Optical Microscope 74
 - Electron Microscopy 77
 - Preparing Specimens for Optical Microscopes 78

CHAPTER 4

A Survey of Prokaryotic Cells and Microorganisms 88

- 4.1 Characteristics of Cells and Life 89
 - What Is Life? 89
- 4.2 Prokaryotic Profiles: The Bacteria and Archaea 90
 - The Structure of a Generalized Bacterial Cell 90
- 4.3 External Structures 90
 - Appendages: Cell Extensions, 90
- 4.4 The Cell Envelope: The Boundary Layer of Bacteria 97
 - Differences in Cell Envelope Structure 97
 - Structure of Cell Walls 98
 - Mycoplasmas and Other Cell-Wall-Deficient Bacteria 101
 - Cell Membrane Structure 101
- 4.5 Bacterial Internal Structure 102
 - Contents of the Cell Cytoplasm 102
 - Bacterial Endospores: An Extremely Resistant Life Form 104
- 4.6 Bacterial Shapes, Arrangements, and Sizes 106
- 4.7 Classification Systems in the Prokaryotae 108
 - Bacterial Taxonomy Based on *Bergey's Manual* 109
 - Survey of Prokaryotic Groups with Unusual Characteristics 112
 - Free-Living Nonpathogenic Bacteria 112
 - Unusual Forms of Medically Significant Bacteria 114
- 4.8 Archaea: The Other Prokaryotes 115

CHAPTER 5**A Survey of Eukaryotic Cells and Microorganisms 121**

- 5.1 The History of Eukaryotes 122**
- 5.2 Form and Function of the Eukaryotic Cell: External Structures 124**
 - Locomotor Appendages: Cilia and Flagella 124
 - The Glycocalyx 125
 - Form and Function of the Eukaryotic Cell: Boundary Structures 126
- 5.3 Form and Function of the Eukaryotic Cell: Internal Structures 127**
 - The Nucleus: The Control Center 127
 - Endoplasmic Reticulum: A Passageway in the Cell 128
 - Golgi Apparatus: A Packaging Machine 128
 - Mitochondria: Energy Generators of the Cell 130
 - Chloroplasts: Photosynthesis Machines 131
 - Ribosomes: Protein Synthesizers 131
 - The Cytoskeleton: A Support Network 132
 - Survey of Eukaryotic Microorganisms 133
- 5.4 The Kingdom of the Fungi 134**
 - Fungal Nutrition 134
 - Organization of Microscopic Fungi 135
 - Reproductive Strategies and Spore Formation 135
 - Fungal Classification 141
 - Fungal Identification and Cultivation 142
 - The Roles of Fungi in Nature and Industry 142
- 5.5 The Protists 143**
 - The Algae: Photosynthetic Protists 143
 - Biology of the Protozoa 145
- 5.6 The Parasitic Helminths 150**
 - General Worm Morphology 151
 - Life Cycles and Reproduction 151
 - A Helminth Cycle: The Pinworm 151
 - Helminth Classification and Identification 152
 - Distribution and Importance of Parasitic Worms 152

CHAPTER 6**An Introduction to Viruses 157**

- 6.1 The Search for the Elusive Viruses 158**
- 6.2 The Position of Viruses in the Biological Spectrum 158**
- 6.3 The General Structure of Viruses 159**
 - Size Range 159
 - Viral Components: Capsids, Nucleic Acids, and Envelopes 160
- 6.4 How Viruses Are Classified and Named 166**
- 6.5 Modes of Viral Multiplication 168**
 - Multiplication Cycles in Animal Viruses 168
 - The Multiplication Cycle in Bacteriophages 173

6.6 Techniques in Cultivating and Identifying Animal Viruses 176

- Using Cell (Tissue) Culture Techniques 176
- Using Bird Embryos 177
- Using Live Animal Inoculation 178

6.7 Medical Importance of Viruses 178**6.8 Detection and Treatment of Animal Viral Infections 179****6.9 Prions and Other Nonviral Infectious Particles 179****CHAPTER 7****Elements of Microbial Nutrition, Ecology, and Growth 185****7.1 Microbial Nutrition 186**

- Chemical Analysis of Cell Contents 187
- Sources of Essential Nutrients 188
- How Microbes Feed: Nutritional Types 189
- Transport: Movement of Chemicals across the Cell Membrane 192
- The Diffusion of Water: Osmosis 193
- Endocytosis: Eating and Drinking by Cells 197

7.2 Environmental Factors That Influence Microbes 198

- Adaptations to Temperature 198
- Gas Requirements 200
- Effects of pH 201
- Osmotic Pressure 202
- Miscellaneous Environmental Factors 202
- Ecological Associations among Microorganisms 202
- Interrelationships between Microbes and Humans 204

7.3 The Study of Microbial Growth 206

- The Basis of Population Growth: Binary Fission 206
- The Rate of Population Growth 206
- The Population Growth Curve 208
- Stages in the Normal Growth Curve 208
- Other Methods of Analyzing Population Growth 210

CHAPTER 8**An Introduction to Microbial Metabolism: The Chemical Crossroads of Life 216****8.1 The Metabolism of Microbes 217**

- Enzymes: Catalyzing the Chemical Reactions of Life 218
- Regulation of Enzymatic Activity and Metabolic Pathways 224

8.2 The Pursuit and Utilization of Energy 226

- Cell Energetics 226

8.3 Pathways of Bioenergetics 229

- Catabolism: An Overview of Nutrient Breakdown and Energy Release 230

- Energy Strategies in Microorganisms 230
- Aerobic Respiration 231
- Pyruvic Acid—A Central Metabolite 233
- The Krebs Cycle—A Carbon and Energy Wheel 233
- The Respiratory Chain: Electron Transport and Oxidative Phosphorylation 235
- Summary of Aerobic Respiration 238
- Anaerobic Respiration 239
- The Importance of Fermentation 240

8.4 Biosynthesis and the Crossing Pathways of Metabolism 241

- The Frugality of the Cell—Waste Not, Want Not 242
- Assembly of the Cell 244

8.5 Photosynthesis: The Earth's Lifeline 244

- Light-Dependent Reactions 245
- Light-Independent Reactions 246
- Other Mechanisms of Photosynthesis 246

CHAPTER 9 Microbial Genetics 252

9.1 Introduction to Genetics and Genes: Unlocking the Secrets of Heredity 253

- The Nature of the Genetic Material 253
- The Structure of DNA: A Double Helix with Its Own Language 255
- The Significance of DNA Structure 258
- DNA Replication: Preserving the Code and Passing It On 258

9.2 Applications of the DNA Code: Transcription and Translation 261

- The Gene-Protein Connection 261
- The Major Participants in Transcription and Translation 262
- Transcription: The First Stage of Gene Expression 264
- Translation: The Second Stage of Gene Expression 264
- Eukaryotic Transcription and Translation: Similar yet Different 268
- The Genetics of Animal Viruses 270

9.3 Genetic Regulation of Protein Synthesis and Metabolism 271

- The Lactose Operon: A Model for Inducible Gene Regulation in Bacteria 272
- A Repressible Operon 275

9.4 Mutations: Changes in the Genetic Code 276

- Causes of Mutations 277
- Categories of Mutations 278
- Repair of Mutations 278
- The Ames Test 279
- Positive and Negative Effects of Mutations 279

9.5 DNA Recombination Events 280

- Transmission of Genetic Material in Bacteria 280

CHAPTER 10 Genetic Engineering: A Revolution in Molecular Biology 289

10.1 Basic Elements and Applications of Genetic Engineering 290

10.2 Tools and Techniques of Genetic Engineering 290

- Practical Properties of DNA 290

10.3 Methods in Recombinant DNA Technology: How to Imitate Nature 297

- Technical Aspects of Recombinant DNA and Gene Cloning 299
- Construction of a Recombinant, Insertion into a Cloning Host, and Genetic Expression 300

10.4 Biochemical Products of Recombinant DNA Technology 302

10.5 Genetically Modified Organisms 303

- Recombinant Microbes: Modified Bacteria and Viruses 303
- Recombination in Multicellular Organisms 305

10.6 Genetic Treatments: Introducing DNA into the Body 307

- Gene Therapy 307
- DNA Technology as Genetic Medicine 308

10.7 Genome Analysis: Fingerprints and Genetic Testing 308

- DNA Fingerprinting: A Unique Picture of a Genome 309

CHAPTER 11 Physical and Chemical Agents for Microbial Control 316

11.1 Controlling Microorganisms 317

- General Considerations in Microbial Control 317
- Relative Resistance of Microbial Forms 317
- Terminology and Methods of Microbial Control 319
- What Is Microbial Death? 320
- How Antimicrobial Agents Work: Their Modes of Action 322

11.2 Methods of Physical Control 323

- Heat as an Agent of Microbial Control 323
- The Effects of Cold and Dessication 327
- Radiation as a Microbial Control Agent 327
- Sterilization by Filtration: Techniques for Removing Microbes 330

11.3 Chemical Agents in Microbial Control 330

- Choosing a Microbicidal Chemical 331
- Factors That Affect the Germicidal Activity of Chemicals 332
- Germicidal Categories According to Chemical Group 333

CHAPTER 12

Drugs, Microbes, Host—The Elements of Chemotherapy 347

- 12.1 Principles of Antimicrobial Therapy 348**
The Origins of Antimicrobial Drugs 348
- 12.2 Interactions between Drugs and Microbes 350**
Mechanisms of Drug Action 351
- 12.3 Survey of Major Antimicrobial Drug Groups 355**
Antibacterial Drugs That Act on the Cell Wall 355
Antibiotics That Damage Bacterial Cell Membranes 359
Drugs That Act on DNA or RNA 359
Drugs That Interfere with Protein Synthesis 359
Drugs That Block Metabolic Pathways 360
Agents to Treat Fungal Infections 361
Antiparasitic Chemotherapy 362
- 12.4 Interactions between Microbes and Drugs: The Acquisition of Drug Resistance 366**
How Does Drug Resistance Develop? 366
Specific Mechanisms of Drug Resistance 366
Natural Selection and Drug Resistance 368
- 12.5 Interactions between Drugs and Hosts 369**
Toxicity to Organs 369
Allergic Responses to Drugs 371
Suppression and Alteration of Microflora by Antimicrobials 371
- 12.6 Considerations in Selecting an Antimicrobial Drug 373**
Identifying the Agent 373
Testing for the Drug Susceptibility of Microorganisms 373
The MIC and the Therapeutic Index 374

CHAPTER 13

Microbe-Human Interactions: Infection and Disease 382

- 13.1 We Are Not Alone 383**
Contact, Colonization, Infection, Disease 383
Resident Flora: The Human as a Habitat 383
Indigenous Flora of Specific Regions 385
Flora of the Human Skin 386
Flora of the Gastrointestinal Tract 387
Flora of the Respiratory Tract 388
Flora of the Genitourinary Tract 388
- 13.2 Major Factors in the Development of an Infection 389**
Becoming Established: Step One—Portals of Entry 391
The Requirement for an Infectious Dose 394
Becoming Established: Step Two—Attaching to the Host 394
Becoming Established: Step Three—Surviving Host Defenses 395

- How Virulence Factors Contribute to Tissue Damage and Disease 396
The Process of Infection and Disease 399
Signs and Symptoms: Warning Signals of Disease 401
The Portal of Exit: Vacating the Host 402
The Persistence of Microbes and Pathologic Conditions 403

- 13.3 Sources and Transmission of Microbes 403**
Reservoirs: Where Pathogens Persist 403
The Acquisition and Transmission of Infectious Agents 405
Nosocomial Infections: The Hospital as a Source of Disease 407
Universal Blood and Body Fluid Precautions 408
- 13.4 Epidemiology: The Study of Disease in Populations 410**
Who, When, and Where? Tracking Disease in the Population 410

CHAPTER 14

Host Defenses: Overview and Nonspecific Defenses 420

- 14.1 Defense Mechanisms of the Host in Perspective 421**
Barriers at the Portal of Entry: An Inborn First Line of Defense 421
- 14.2 Structure and Function of the Organs of Defense and Immunity 423**
The Communicating Body Compartments 424
- 14.3 Actions of the Second Line of Defense 432**
Recognition: Activation of the Innate Immunologic Response 432
The Inflammatory Response: A Complex Concert of Reactions to Injury 432
The Stages of Inflammation 433
Phagocytosis: Partner to Inflammation and Immunity 437
Interferon: Antiviral Cytokines and Immune Stimulants 440
Complement: A Versatile Backup System 440
Overall Stages in the Complement Cascade 441
Summary of Host Defenses 442

CHAPTER 15

Adaptive, Specific Immunity and Immunization 447

- 15.1 Specific Immunity: The Adaptive Line of Defense 448**
A General Scheme for Classifying Immunities 449
An Overview of Specific Immune Responses 451
- 15.2 Development of the Immune Response System 451**
Markers on Cell Surfaces Involved in Recognition of Self and Nonself 451
The Origin of Diversity and Specificity in the Immune Response 453

- 15.3 Lymphocyte Responses and Antigens 456**
 Specific Events in B-Cell Maturation 456
 Specific Events in T-Cell Maturation 456
 Entrance and Processing of Antigens and Clonal Selection 457
- 15.4 Cooperation in Immune Reactions to Antigens 458**
 The Role of Antigen Processing and Presentation 458
- 15.5 B-Cell Responses 459**
 Activation of B Lymphocytes: Clonal Expansion and Antibody Production 459
 Products of B Lymphocytes: Antibody Structure and Functions 461
 Monoclonal Antibodies: Useful Products from Cancer Cells 466
- 15.6 T-Cell Responses 466**
 Cell-Mediated Immunity (CMI) 466
- 15.7 Immunization: Methods of Manipulating Immunity for Therapeutic Purposes 469**
 Passive Immunization 469
 Artificial Active Immunity: Vaccination 469
 Development of New Vaccines 473
 Routes of Administration and Side Effects of Vaccines 474
 To Vaccinate: Why, Whom, and When? 474

CHAPTER 16

Disorders in Immunity 481

- 16.1 The Immune Response: A Two-Sided Coin 482**
 Overreactions to Antigens: Allergy/Hypersensitivity 482
- 16.2 Type I Allergic Reactions: Atopy and Anaphylaxis 484**
 Modes of Contact with Allergens 484
 The Nature of Allergens and Their Portals of Entry 484
 Mechanisms of Type I Allergy: Sensitization and Provocation 484
 Cytokines, Target Organs, and Allergic Symptoms 486
 Specific Diseases Associated with IgE- and Mast-Cell-Mediated Allergy 488
 Anaphylaxis: A Powerful Systemic Reaction to Allergens 489
 Diagnosis of Allergy 490
 Treatment and Prevention of Allergy 490
- 16.3 Type II Hypersensitivities: Reactions That Lyse Foreign Cells 492**
 The Basis of Human ABO Antigens and Blood Types 492
 Antibodies against A and B Antigens 493
 The Rh Factor and Its Clinical Importance 494
 Other RBC Antigens 496
- 16.4 Type III Hypersensitivities: Immune Complex Reactions 496**
 Mechanisms of Immune Complex Disease 496
 Types of Immune Complex Disease 496

- 16.5 Immunopathologies Involving T Cells 497**
 Type IV Delayed-Type Hypersensitivity 497
 T Cells and Their Role in Organ Transplantation 499
 Types of Transplants 501
- 16.6 Autoimmune Diseases—An Attack on Self 501**
 Genetic and Gender Correlation in Autoimmune Disease 502
 The Origins of Autoimmune Disease 502
 Examples of Autoimmune Disease 503
- 16.7 Immunodeficiency Diseases: Compromised Immune Responses 505**
 Primary Immunodeficiency Diseases 505
 Secondary Immunodeficiency Diseases 507
- 16.8 The Function of the Immune System in Cancer 508**

CHAPTER 17

Diagnosing Infections 513

- 17.1 Preparation for the Survey of Microbial Diseases 514**
 Phenotypic Methods 514
 Genotypic Methods 514
 Immunologic Methods 515
- 17.2 On the Track of the Infectious Agent: Specimen Collection 515**
 Overview of Laboratory Techniques 516
- 17.3 Phenotypic Methods 517**
 Immediate Direct Examination of Specimen 517
 Cultivation of Specimen 518
- 17.4 Genotypic Methods 520**
 DNA Analysis Using Genetic Probes 520
 Roles of the Polymerase Chain Reaction and Ribosomal RNA in Identification 520
- 17.5 Immunologic Methods 521**
 General Features of Immune Testing 521
 Agglutination and Precipitation Reactions 523
 The Western Blot for Detecting Proteins 524
 Complement Fixation 525
 Miscellaneous Serological Tests 526
 Fluorescent Antibody and Immunofluorescent Testing 526
 Immunoassays: Tests of Great Sensitivity 527
 Tests That Differentiate T Cells and B Cells 529
 In Vivo Testing 529
 A Viral Example 529
