

CONTENTS

Preface xiii

CHAPTER 1 **Viruses and Host Cells 1**

What Is a Virus? 2

Where Are Viruses Found in Nature? 4

What Are the Physical Properties of Viruses? 5

Size 5

The Genome 5

Virion Architecture 6

What Structural Features of Cells Are Important in Their Role as Viral Hosts? 13

Animal Cells 13

Plant Cells 14

Prokaryotic Cells 14

Appendages 18

What Genetic Features of Cells Are Important in the Virus-Host Cell Interaction? 19

The Organization of the Host Cell Genome 19

Posttranscriptional Modification of mRNA 20

Internal Compartmentalization 21

The Cell Cycle 21

How Does a Virus Reproduce? 22

What Are the Basic Techniques Used to Study the Virus-Host Cell Interaction? 23

Animal Virus Techniques 24

Plant Virus Techniques 27

How Are Viruses Named? 28

The Baltimore Classification 29

Summary: What Is a Virus? 31

CHAPTER 2**Getting In: Attachment, Penetration,
and Uncoating 35**

- Why Does a Virus Infect Only Certain Cells and Not Others? 36
- What Types of Interactions Occur Between the Virion and the Cell Surface
During Attachment? 38
- How Do Bacteriophages Recognize Their Host Cells? 41
 - T4 Attachment to E. coli* 42
 - Other Bacteriophages* 44
- How Do Bacteriophages Introduce Their Nucleic Acids into Host Cells? 46
 - Penetration by the Coliphages T2 and T4* 46
 - Other Bacteriophages* 49
- How Do Animal Viruses Recognize Their Host Cells? 50
 - Attachment by Naked Viruses* 51
 - Attachment by Enveloped Viruses* 53
- How Do Animal Viruses Enter Their Host Cells and Uncoat Their Nucleic Acids? 58
 - General Mechanisms of Penetration and Uncoating* 58
 - Fusion Proteins* 60
 - Penetration by Enveloped Viruses: Fusion with the Plasma Membrane* 61
 - Penetration by Enveloped Viruses: Endocytosis* 66
 - Penetration by Naked Viruses* 69
 - Transport of the Viral Genome into the Nucleus* 69
- How Do Plant Viruses Infect Their Host Cells? 69
- Summary 71

CHAPTER 3**Expression and Replication of the Viral Genome
in Prokaryotic Hosts 75**

- What Are the Essential Features of Genome Replication and Expression
in Prokaryotes? 76
 - DNA Replication in Prokaryotes* 76
 - Transcription in Prokaryotes* 78
 - Translation in Prokaryotes* 79
- What Strategies Do Prokaryotic Viruses Use to Facilitate Replication
and Expression of Their Genomes? 80
- What Structural Features Characterize the Genomes of the Double-Stranded
DNA Bacteriophages? 83
 - The T-Series Coliphages* 83

How Do the T-Odd Coliphages Express and Replicate Their Genomes? 85

The Bacteriophage T7 85

The Bacteriophage T5 89

How Do the T-Even Coliphages Express and Replicate Their Genomes? 89

How Does Lambda Virus Express and Replicate Its Genome? 94

How Do Single-Stranded DNA Bacteriophages Express and Replicate Their Genomes? 100

How Do RNA Bacteriophages Replicate and Express Their Genomes? 104

General Features of RNA Bacteriophage Replication 104

The Genomes of the RNA Bacteriophages Q β and MS2 107

How Do the RNA Bacteriophages Regulate the Amount of Each Protein Synthesized During Their Replication? 108

Summary 113

CHAPTER 4

Expression and Replication of the Viral Genome in Eukaryotic Hosts: The RNA Viruses 115

What Features of a Eukaryotic Cell's Genetic System Influence Viral Replication and Gene Expression? 116

What Structural Features Distinguish the Positive-Strand RNA Viruses of Animals? 118

What Strategies Do the Animal Positive-Strand Viruses Use to Express and Replicate Their Polycistronic Genomes? 120

Picornaviruses 121

How Are Host and Poliovirus mRNAs Distinguished? 124

How Is Translation of Poliovirus mRNA Begun? 125

How Does Poliovirus Replicate Its Genome? 126

Togaviruses 129

Coronaviruses 133

How Is a Nested Set of mRNAs Synthesized? 135

What Strategies Do Plant Positive-Strand Viruses Use to Express and Replicate Their Genomes? 137

What Structural Features Distinguish the Negative-Strand RNA Viruses? 140

What Strategies Do Negative-Strand Viruses Use to Express and Replicate Their Genomes? 143

Rhabdoviruses 143

Paramyxoviruses 145

Filoviruses 145

Orthomyxoviruses 147

Can a Viral Genome Have Both Positive- and Negative-Strand RNA? 150

How Do Double-Stranded RNA Viruses Express and Replicate Their Genomes?	151
What Structural Features Distinguish the Retroviruses from Other Positive-Strand RNA Viruses?	154
How Does "Reverse Transcription" Work?	157
How Does Retrovirus Proviral DNA Become Incorporated into the Host Cell's Genome?	160
How Are Retrovirus Genes Expressed?	162
How Do Retroviruses Replicate Their Genomes?	163
How Do the Lentiviruses Differ from the Oncoviruses?	164
<i>Functions of the HIV-1 Regulatory and Accessory Gene Products</i>	165
Summary	167

CHAPTER 5

Expression and Replication of the Viral Genome in Eukaryotic Hosts: The DNA Viruses 171

What Structural Features Distinguish Eukaryotic DNA Viruses?	172
What Outcomes Are Possible When a DNA Virus Infects an Animal Cell?	175
How Do Animal Viruses with Double-Stranded DNA Genomes Express and Replicate Those Genomes?	177
<i>The Papovaviruses</i>	177
<i>The Adenoviruses</i>	181
<i>The Herpesviruses</i>	184
<i>The Poxviruses</i>	186
How Do Animal Single-Stranded DNA Viruses Express and Replicate Their Genomes?	188
How Do Plant Single-Stranded DNA Viruses Express and Replicate Their Genomes?	191
What Features Set Hepadnaviruses and Caulimoviruses Apart from Other Eukaryotic DNA Viruses?	193
<i>The Hepadnaviruses</i>	193
<i>The Caulimoviruses</i>	197
Summary	199

CHAPTER 6

Assembly, Maturation, and Release of Virions 201

What Is the Evidence That Viruses Self-Assemble?	202
What Basic Strategies Are Used to Assemble Capsids?	203
How Are Rigid Helical Virions Assembled?	203
How Does the Assembly of Flexible and Rigid Helical Capsids Differ?	209

How Are the Capsids of Icosahedral RNA Viruses Assembled?	210
<i>The Assembly of Poliovirus</i>	213
How Is the RNA Arranged in an Icosahedral Capsid?	215
How Are Simple Icosahedral DNA Bacteriophages Assembled?	215
How Are the Capsids of Complex Bacteriophages Assembled?	219
What Strategies Do DNA Bacteriophages Use to Fill Their Capsids?	220
How Are the Icosahedral DNA Viruses of Eukaryotes Assembled?	223
How Do Viruses with Segmented Genomes Ensure That Virions Contain a Copy of Each Segment?	223
How Do Viruses Exit Their Host Cells?	224
How Do Naked Viruses Exit Their Host Cells?	224
How Do Enveloped Viruses Acquire Their Envelopes?	225
How Do Nucleocapsids Identify Modified Membrane Locations for Budding?	227
How Does a Virus Target a Particular Membrane Region as the Site of Budding?	227
Do All Viruses Bud Through the Cytoplasmic Membrane?	229
Summary	232

CHAPTER 7

Effects of Viral Infection on Host Cells: Cytological and Inductive Effects 235

What Morphological Changes in Host Cells Are Associated with Viral Infections?	236
What Causes Cytopathic Effects in Animal Cells?	240
What Strategies Do Viruses Use to Inhibit Eukaryotic Host Cell Protein Synthesis?	241
<i>Competition</i>	243
<i>Inhibition of Host mRNA Transport from the Nucleus</i>	244
<i>Degradation of Host mRNA</i>	244
<i>Blockage of Initiation Complex Formation</i>	245
<i>Covalent Modification of Translation-Related Components</i>	245
<i>Increases in Intracellular Cation Concentrations</i>	248
<i>Viral Inhibitory Factors</i>	249
How Do Viruses Inhibit the Transcription of Their Hosts' Genomes?	250
How Do Viruses Inhibit the Replication of Their Hosts' Genomes?	251
How Do Bacteriophages Inhibit the Metabolism of Their Host Cells?	251
How Do Host Cells Fight Back Against the Viruses That Infect Them?	253
What Types of Antiviral Defenses Do Prokaryotic Cells Have?	253
What Types of Antiviral Defenses Do Eukaryotic Cells Have?	256
<i>Interferon Proteins and Interferon Genes</i>	257
<i>Synthesis of Interferon</i>	257
<i>The Action of Interferon</i>	258

<i>The Antiviral State</i>	260
<i>The 2,5-OligoA System</i>	260
<i>The Protein Kinase System</i>	262
<i>Other Interferon-Related Activities</i>	262
What Countermeasures Do Viruses Have to Combat the Host Interferon System Defenses?	262
What Clinical Use Is Made of Interferon and Other Antiviral Agents?	264
<i>Antiviral Drugs</i>	265
Summary	271

CHAPTER 8 **Effects of Viral Infection on Host Cells: Integrated Viruses and Persistent Infections** 275

Why Is Every Viral Infection Not Productive?	276
What Interaction Between a Bacteriophage and Host Cell Gives Rise to the Lysogenic State?	279
What Genetic Events Permit a Lambda Virus to Become Lysogenic?	283
<i>How Are the Events Leading to the Lytic Cycle Prevented?</i>	285
<i>How Is λ DNA Integration Accomplished?</i>	285
What Determines if a Particular Lambda Virus Infection Results in Lysogeny or the Complete Lytic Cycle?	286
How Is Lysogeny Reversed?	286
What Effects May Lysogeny Have on the Host Bacterium?	287
What Is the Evolutionary Significance of Lysogeny?	290
Under What Circumstances Do Animal Viruses Become Inserted into Their Host Cells' Genomes?	290
What Effect Does Integration of an Animal Virus Have on a Host Cell?	292
How Do Animal Cells Regulate Their Cell Cycles?	294
How Do Retroviruses Transform Animal Cells?	297
Why Do Viral Oncogenes Cause Transformation When Their Equivalent Cellular Proto-Oncogenes Do Not?	299
What Mechanisms Besides Viral Oncogenes Do Retroviruses Use to Transform Cells?	302
How Is Transformation of Animal Cells by DNA Viruses Different from That Caused by RNA Viruses?	304
What Is the Mechanism of Transformation by DNA Viruses?	304
<i>The Papovaviruses</i>	305
<i>The SV40 T Antigens</i>	306
<i>The Adenoviruses</i>	308

What Human Tumors May Be Caused by DNA Viruses?	308
<i>The Papillomaviruses</i>	308
<i>The Herpesviruses</i>	310
Besides Integration into the Host Cell Genome, How May a Virus Infection Persist?	311
What Effect Does a Persistent Infection Have on the Host Organism?	314
How Do the Herpesviruses Establish Their Latent Infections?	315
Summary	315

CHAPTER 9

Subviral Entities, Viral Evolution, and Viral Emergence 321

What Structural Features Distinguish Viroids from Viruses?	322
What Proteins Do Viroids Encode?	324
What Host Enzymes Do Viroids Use to Replicate Themselves?	325
What Is the Mechanism of Viroid Replication?	325
How Do Viroids Cause Plant Diseases?	327
What Other Subviral Entities Have Been Found?	327
How Do Satellite RNAs and Satellite Viruses Replicate?	328
How Is Hepatitis Delta Virus Replicated?	329
What Other Subviral Entities Infect Animal Cells?	330
How Do Prions Replicate?	333
<i>Yeast Prion Model Systems</i>	334
What Is the Origin of the Various Types of Subcellular Entities?	334
<i>The Origins of Subviral Entities</i>	336
What Factors Affect Viral Evolution?	337
What Constrains or Counters the Effects of Mutation and Recombination in the Evolution of Viruses?	338
How Do Nonhuman Viruses Gain the Ability to Infect Humans?	340
<i>Zoonotic Viruses</i>	341
<i>The Origin of HIV</i>	342
Summary	343

Appendix A The Virologist's Toolkit 347

Appendix B Characteristics of Selected Viruses 373

Glossary 383
