

Life

Brief Contents

UNIT 1 *From Atoms to Cells*

- 1 What Is Life? 1
- 2 Of Atoms and Molecules: Chemistry Basics 17
- 3 Life's Chemistry 29
- 4 Cells: Units of Life 43
- 5 The Cell Surface and Cytoskeleton 65
- 6 The Energy of Life 87
- 7 Photosynthesis 105
- 8 How Cells Release Energy 125

UNIT 2 *Genetics and Biotechnology*

- 9 The Cell Cycle 145
- 10 Meiosis 163
- 11 Transmission of Inherited Traits 183
- 12 Chromosomes 207
- 13 DNA Structure and Function 227
- 14 Genetic Technology 255

UNIT 3 *Evolution*

- 15 The Evolution of Evolutionary Thought 271
- 16 The Forces of Evolutionary Change: Microevolution 287
- 17 Speciation and Extinction 301
- 18 Evidence of Evolution 321
- 19 The Origin and History of Life 343

UNIT 4 *The Diversity of Life*

- 20 Viruses 367
- 21 Bacteria and Archaea 385
- 22 Protista 403
- 23 Plantae 421

- 24 Fungi 443
- 25 Animalia I—Sponges Through Echinoderms 461
- 26 Animalia II—The Chordates 489

UNIT 5 *Plant Life*

- 27 Plant Form and Function 515
- 28 Plant Nutrition and Transport 537
- 29 Reproduction of Flowering Plants 551
- 30 Plant Responses to Stimuli 569

UNIT 6 *Animal Life*

- 31 Animal Tissues and Organ Systems 589
- 32 The Nervous System 609
- 33 The Senses 637
- 34 The Endocrine System 657
- 35 The Musculoskeletal System 677
- 36 The Circulatory System 701
- 37 The Respiratory System 721
- 38 Digestion and Nutrition 739
- 39 Regulation of Temperature and Body Fluids 761
- 40 The Immune System 777
- 41 Human Reproduction and Development 797

UNIT 7 *Behavior and Ecology*

- 42 Animal Behavior 825
- 43 Populations 849
- 44 Communities and Ecosystems 865
- 45 Biomes and Aquatic Ecosystems 889
- 46 Environmental Challenges 911

Life

Detailed Contents

About the Authors iii
Preface xvii

UNIT 1

From Atoms to Cells

Chapter 1

What Is Life? 1

1.1 Organization and Energy: Why a Rabbit Is Not a Rock 2

- Organisms Exhibit Dynamic Organization 2
- All Organisms Utilize Energy 4
- Organisms Maintain Internal Constancy 4

1.2 The Continuity of Life in the Environment: Why Rabbits Abound 5

- Organisms Reproduce, Grow, and Develop 5
- Organisms Respond to the Environment 6

1.3 Life Evolves, Producing Great Diversity 7

- Evolution Is Essential to Life 7
- Domains and Kingdoms Describe and Categorize Life's Diversity 7

1.4 The Process of Scientific Inquiry 8

- A Theory Summarizes Knowledge 10
- Controlled Experiments Verify Theories 10
- Observations 10
- Experimental Design Seeks To Ensure Validity 12

1.5 The Limitations of Scientific Inquiry 13

- Results Can Be Interpreted Different Ways 13
- Unexpected Results May Be Discounted 14

Chapter 2

Of Atoms and Molecules: Chemistry Basics 17

2.1 Matter: The Basis for Rabbits and Rocks and Everything Else 18

- Elements Have Unique Properties 18
- An Atom Is the Smallest Unit of an Element 18
- Molecules Are Atoms Bound Together 19

2.2 When Atoms Interact: Chemical Bonds 20

- Electrons Determine Whether Atoms Bond 20
- In Covalent Bonds, Electrons Are Shared 21
- In Ionic Bonds, Electrons Are Donated and Accepted 22
- Weak Chemical Bonds Provide Vital Links 23

2.3 Water's Importance to Life 24

- All Life Processes Take Place in Solutions 24
- Solutions May Be Acidic or Basic 25
- Water's Properties Regulate Temperature 26

Chapter 3

Life's Chemistry 29

3.1 Carbon: The Basis of Life's Chemistry 30

- Molecules Can Be Functional Groups 30
- Life Depends on Four Major Types of Molecules 30
- Polymers Expand Properties of Monomers 30
- Building Polymers Relies on a Common Chemical Reaction 30

3.2 Carbohydrates: Energy and Structure 32

- Monosaccharides and Disaccharides Are Simple Carbohydrates 32
- Polysaccharides Provide Energy Storage and Structure 32

3.3 Lipids: Energy-Rich and Oily 33

- Fatty Acids Combine to Form Triglycerides and Phospholipids 34
- Sterols Make Up Hormones and Cholesterol 35
- Waxes Protect Cells 35

3.4 Proteins: Highly Diverse Molecules 35

- Amino Acids Are the Monomers of Proteins 36
- Proteins Must Fold to Function 37
- Enzymes Are Life's Catalysts 38

3.5 Nucleic Acids: Carriers of the Genetic Blueprint 39

Chapter 4

Cells: Units of Life 43

- 4.1 The Discovery of Cells 44**
 - Lenses Reveal the World of the Cell 45
 - The Cell Theory Emerges 46
- 4.2 Variations on the Cellular Theme 47**
 - Bacterial Cells Lack Organelles 50
 - Archaean Cells Represent a Distant Ancestor 51
 - Eukaryotic Cells Use Organelles 51
- 4.3 An Introduction to Organelles 52**
 - Organelles Synthesize and Process Proteins 52
 - Organelles Interact to Secrete Substances 54
- 4.4 The Nucleus and the Cytoplasm 55**
 - The Nucleus Exports RNA Instructions 55
 - The Cytoplasm Is the Site of Protein Synthesis 55
- 4.5 Lysosomes and Peroxisomes: Cellular Digestion Centers—and More 57**
 - Lysosomes Are Cellular Recycling Centers 57
 - Peroxisomes Facilitate Oxidative Reactions 57
- 4.6 Mitochondria and Chloroplasts: Organelles of Energy 59**
 - Mitochondria Extract Energy from Nutrients 59
 - Chloroplasts Provide Plant Cells with Nutrients 59
- 4.7 Origins of Complex Cells 60**
 - Structure and DNA Sequences Provide Evidence 60
 - How Endosymbiosis May Have Worked 61

Chapter 5

The Cell Surface and Cytoskeleton 65

- 5.1 The Cell Membrane and Cell Function 66**
- 5.2 The Structure of a Cell Membrane 67**
- 5.3 Diffusion: Passive Flow Across a Membrane 68**
 - Diffusion Moves Substances from High to Low Concentration 68
 - Osmosis Is the Movement of Water 69
- 5.4 Transport Proteins 71**
 - Channels Allow Passive Movement at a Faster Rate 71
 - Carriers Move Cargo from One Side to the Other 71
 - Pumps Use Energy To Move Molecules or Ions Against a Gradient 72
 - Vesicles Perform Mass Movements by Packaging Substances 73
- 5.5 The Cytoskeleton 75**
 - Microtubules Are Composed of Tubulin 75
 - Microfilaments Are Composed of Actin 76
 - Intermediate Filaments Provide Scaffolding 76
- 5.6 Cell Signaling and Response 78**
 - Animal Cell Junction Types Depend on Function 79
 - Cell Walls Add Structure and Allow Interaction 80
 - Cellular Adhesion Directs Cell Movement 80
 - Signal Transduction Mediates Messages 82

Chapter 6

The Energy of Life 87

- 6.1 Energy Definitions 88**
 - Organisms Obtain Energy from the Sun, the Earth, and Other Living Things 89
 - Energy At Rest Is Potential—Energy on the Move Is Kinetic 90
- 6.2 The Laws of Thermodynamics: Obeyed by Both Rabbits and Rocks 91**
 - Energy Is Neither Created nor Destroyed, but Changes Form 91
 - All Energy Transformations Increase Entropy 91
- 6.3 Metabolism and Energy Transformations: How Rabbits Run 92**
 - Anabolism Builds Up—Catabolism Breaks Down 93
 - Forming Bonds Takes Energy—Breaking Bonds Releases It 93
 - Reactions Halt When Equilibrium Is Met 94
 - In Living Systems, Electrons Move Through Oxidation/Reduction Chains 95
- 6.4 ATP: Energy Currency in the Cell 96**
 - Phosphate Bonds Store and Release Energy 96
 - Cells Couple ATP Formation and Breakdown to Other Reactions 98
 - Cofactors and Coenzymes Move Electrons Through Chains 98
- 6.5 Enzymes: Life's Catalysts 99**
 - Enzymes Speed Biochemical Reactions 100
 - Cells Control Metabolic Pathways 100

Chapter 7

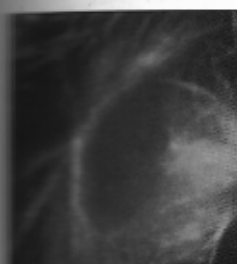

Photosynthesis 105

- 7.1 Overview of Photosynthesis 106**
 - Sunlight Plus Carbon Dioxide Equals Glucose 106
 - How Might Photosynthesis Have Evolved? 107
- 7.2 Light and Its Capture 109**
 - Visible Light Is a Small Part of the Radiation Spectrum 109
 - Pigment Molecules Capture Light Energy 109
- 7.3 Chloroplasts: Solar Collectors and Processors 111**
 - Thylakoid Membranes Are Natural "Solar Panels" 111
 - A Chlorophyll-Based Photosystem Passes Energy to a Reaction Center 112
- 7.4 Photosynthesis: The Light Reactions Begin 113**
 - Photosystem II Produces ATP 113
 - Photosystem I Produces NADPH 114
 - Two Photosystems Extract More Energy Than One 115
- 7.5 The Carbon Reactions 116**
 - The Calvin Cycle "Fixes" Carbon 116
 - Elegant Experiments Revealed the Steps of the Cycle 116
- 7.6 Photosynthetic Efficiency 117**
 - Photorespiration Alters the Calvin Cycle 118
 - C₄ Photosynthesis Decreases Photorespiration 118
 - CAM Photosynthesis Stores Carbon Dioxide at Night 118

Chapter 8

How Cells Release Energy 125

- 8.1 **Cellular Respiration: An Introduction** 126
- 8.2 **An Overview of Glucose Utilization** 127
 - Respiration Reactions Take Place Both Outside and Inside Mitochondria 128
 - Two Types of Phosphorylation Make ATP 128
- 8.3 **Glycolysis: From Glucose to Pyruvic Acid** 130
 - The First Half of Glycolysis Activates Glucose and Produces PGAL 130
 - The Second Half of Glycolysis Extracts Some Energy and Produces Pyruvic Acid 130
- 8.4 **Aerobic Respiration: The Krebs Cycle** 131
 - Pyruvic Acid Is Converted to Acetyl CoA 131
 - The Krebs Cycle Produces ATP and NADH 131
- 8.5 **The Electron Transport Chain** 133
 - Experimentation Confirmed the Role of Mitochondrial Membranes 134
 - How Many ATP Molecules Can One Glucose Molecule Yield? 136
 - Negative Feedback Regulates Aerobic Respiration 136
- 8.6 **Energy Sources Other Than Glucose** 137
- 8.7 **Anaerobic Respiration: Fermentation** 138
- 8.8 **Possible Origins of the Energy Pathways** 140

UNIT 2

Genetics and Biotechnology

Chapter 9

The Cell Cycle 145

- 9.1 **The Balance Between Cell Division and Cell Death** 146
- 9.2 **The Cell Cycle** 147
 - Interphase Is a Time of Great Activity 147
 - Mitosis Distributes Chromosomes 148
 - Cytokinesis Distributes Cytoplasm and Other Cell Contents 151
- 9.3 **Cell Cycle Control** 153
 - Checkpoints Keep the Cell Cycle on Track 153
 - Telomeres Provide a Cellular Clock 153
 - A Variety of Signals Inhibit or Initiate Division 155
 - Stem Cells Provide a Reservoir for New Tissues 155
- 9.4 **Cell Death** 157
 - Apoptosis Is Programmed Cell Death 157
 - Apoptosis Ensures Proper Form and Function 158

- 9.5 **Cancer—When the Cell Cycle Goes Awry** 159
 - Cancer Cells Differ from Normal Cells 159
 - Genes Are Involved in Cancer Development 160

Chapter 10

Meiosis 163

- 10.1 **Reproduction: The Perpetuation of Species** 164
- 10.2 **Variations on the Sexual Reproduction Theme** 164
 - Haploid Cells Arise from the Sexual Life Cycle 165
 - Alternation of Generations Involves Two Multicellular Life Stages 165
 - Conjugation May Provide Evolutionary Clues to Sexual Reproduction 166
- 10.3 **Meiosis: One Replication, Two Divisions** 168
 - The First Division Separates Homologous Pairs 168
 - The Second Division Separates Sister Chromatids 169
- 10.4 **The Sculpting of Human Gametes** 173
 - Each Spermatocyte Produces Four Sperm Cells 173
 - Each Oocyte Produces One Ovum and Three Polar Bodies 176

Chapter 11

Transmission of Inherited Traits 183

- 11.1 **Mendel's Law of Segregation: Single Gene Inheritance** 184
 - Crosses Between Pea Plants Revealed Dominant and Recessive Traits 184
 - Mendel's Trait Segregation Can Be Expressed in Terms of Genes 186
 - Segregation Reflects Meiosis 188
- 11.2 **Pedigrees and Modes of Inheritance** 190
- 11.3 **Mendel's Law of Independent Assortment: Multiple Gene Inheritance** 191
- 11.4 **Allele Interactions** 193
 - Lethal Allele Combinations Remove Phenotypes from Mendelian Ratios 193
 - Multiple Alleles Produce Complex Phenotypic Ratios 194
 - Penetrance and Expressivity Explain Individual Variations 194
 - Pleiotropic Conditions Display Many Symptoms 195
 - Epistasis Refers to a Masking Effect 196
 - Different Types of Dominance Can Cause a Mixed Phenotype 197
- 11.5 **Environmental Influences on Gene Expression** 198
- 11.6 **Genetic Heterogeneity** 199
- 11.7 **Polygenic and Multifactorial Traits** 200
 - Gene Input and Environmental Effects Can Be Predicted 200
 - Certain Studies Can Separate Genetic from Environmental Influences 201

Chapter 12

Chromosomes 207

- 12.1 **Chromosome Structure** 208
 - Microscopic Techniques Allow Chromosomes to be Distinguished 208
 - Artificial Chromosomes Reveal Required Elements 209

- 12.2 **Gene Linkage on Chromosomes** 209
- 12.3 **Crossover Frequency and Linkage Maps** 211
- 12.4 **Chromosomes and Sex Determination** 212
 - A Variety of Sex-Determination Mechanisms Exist 212
 - In Humans, X and Y Chromosomes Determine Gender 213
- 12.5 **Sex-linked Gene Inheritance** 214
- 12.6 **X Chromosome Inactivation** 216
- 12.7 **Abnormalities in Chromosome Number** 218
 - Aneuploidy in Autosomes Produces Severe Problems 220
 - Aneuploidy in Sex Chromosomes Tends to be Less Severe 221
- 12.8 **Abnormalities in Chromosome Structure** 222

Chapter 13

DNA Structure and Function 227

- 13.1 **Identification of the Genetic Material** 228
 - DNA, Not Protein, Carries Genetic Information 229
 - Data and Logic Revealed DNA's Structure 231
- 13.2 **The Double Helix** 232
 - Purines Pair with Pyrimidines in the Two Complementary Strands 232
 - DNA in Chromosomes Is Tightly Wrapped 232
- 13.3 **DNA Replication: Passing on the Code** 234
 - DNA Replication Is Semiconservative 234
 - Five Enzymes Collaborate in Building the New Strands 237
- 13.4 **DNA Repair: Keeping the Code Accurate** 238
- 13.5 **Gene Expression: Putting the Code into Action** 239
 - Operons Turn Genes On or Off in Bacteria 240
 - Transcription Factors Control Eukaryotic Gene Expression 241
 - Transcription Puts the DNA Code into RNA Form 241
- 13.6 **Translation: From Codons to Amino Acids** 243
 - Synthesis Involves Three Types of RNA 243
 - Eukaryotes Alter mRNA in the Nucleus 243
- 13.7 **The Genetic Code: From Gene to Protein** 244
 - Ribosomes Are the Site of Translation 245
 - Protein Folding Is Helped by Chaperone Proteins 247
- 13.8 **Mutation: Strange New Rabbits** 249
 - Sickle Cell Disease Involves a Single Base Mutation 249
 - Mutations Can Be Spontaneous or Induced 250
 - Mutations Are Classified by Effect 251

Chapter 14

Genetic Technology 255

- 14.1 **Molecular Tools to Manipulate and Modify DNA** 256
 - Restriction Enzymes and Ligase Are Used to Cut and Paste 256
 - Reverse Transcriptase Makes DNA from mRNA 257
 - Vectors Are Molecules That Accomplish Cloning and Expression 257
 - Designing a Cloning Experiment 257

- 14.2 **The Polymerase Chain Reaction and DNA Amplification** 259
 - PCR Uses Rapid Cycling to Produce DNA Copies 259
 - Even a Tiny Amount of DNA Can Be Amplified and Matched 260
- 14.3 **Separating and Analyzing DNA** 260
 - Gel Electrophoresis Separates DNA Fragments of Different Sizes 261
 - DNA Fingerprinting Can Yield Precise Identification 262
 - Hybridization Identifies DNA Segments of Interest 262
- 14.4 **DNA Sequencing** 262
 - The Sanger Method Creates Fragments During Replication 262
 - DNA Chips with Known Sequences Facilitate Analysis 264
- 14.5 **Applying Recombinant DNA Technology** 264
 - Transgenic Technology Alters the Genes of an Organism 265
 - Gene Therapy Seeks to Fix Inborn Genetic Errors 265
 - DNA Microarrays Monitor Gene Expression 266
- 14.6 **Gene Silencing: Antisense and Knockout Technologies** 266
 - Antisense Technology Stops Expression 266
 - Knockout Technology Reveals Developmental Steps 267

UNIT 3

Evolution

Chapter 15

The Evolution of Evolutionary Thought 271

- 15.1 **Evolution: Changing Forms Over Time** 272
 - Evolution Explains the Diversity of Organisms 273
 - The Earth's History Provides Clues About Ancient Life-Forms 273
- 15.2 **Charles Darwin's Voyage** 275
 - Darwin Observed Similarities and Differences in Distant Places 275
 - Analysis of Darwin's Observations Led to Principles of Selection and Radiation 277
 - *The Origin of Species* Created Resistance and Controversy 278
- 15.3 **The Mechanism of Natural Selection** 278
- 15.4 **Evolution Today—Epidemiology** 279
 - Emerging Infectious Diseases Demonstrate Selection 279
 - The Development of Ebola Virus Illustrates Divergence 280
 - Antibiotic Resistance Is a Form of Artificial Selection 282

Chapter 16

The Forces of Evolutionary Change: Microevolution 287

- 16.1 **The Inevitability of Evolution** 288
 - The Hardy-Weinberg Equilibrium Describes Stable Populations 288
 - Evolution Occurs When Allele Frequencies Change 290

- 18.2 **Waste Choice and Evolution: Some Rabbits Reproduce More Than Others** 290
- 18.3 **The Effects of Migration on Population Allele Frequencies** 291
- 18.4 **Genetic Drift** 291
 - The Founder Effect Results from Emigration of a Small Group 291
 - Bottlenecks Occur When Only a Few Individuals Survive a Disaster 292
- 18.5 **Mutation and Variability** 294
- 18.6 **Natural Selection as Evolutionary Force** 294
 - Selection Acts in Different Ways 294
 - Balanced Polymorphism Reflects a Homeostatic State 294

Chapter 17

Speciation and Extinction 301

- 17.1 **The Species Concept** 302
 - The Concept of Species Has Changed Historically 302
 - Tree Diagrams Illustrate Relationships and Endpoints 304
 - Molecular Evidence Clarifies Relationships 304
- 17.2 **Speciation and Reproductive Barriers** 305
 - Prezygotic Barriers Prevent Fertilization 305
 - Postzygotic Barriers Include Hybrid Inviability, Handicaps, or Sterility 307
 - Chromosome Number Contributes to Speciation 307
- 17.3 **Speciation and Space** 308
 - Allopatric Speciation Reflects a Geographical Barrier 308
 - Parapatric Speciation Occurs Among Neighboring Populations 309
 - Sympatric Speciation Arises in a Shared Habitat 309
 - Analysis of Geographic Speciation Can Be Complex 310
- 17.4 **Speciation and Time** 311
 - Evolution May Be Gradual or Rapid 311
 - Adaptive Radiation Explains Bursts of Speciation 313
- 17.5 **Extinctions** 314
 - Small-Scale Extinctions Occur Continually 314
 - Mass Extinctions Reflect Drastic Change 315

Chapter 18

Evidence of Evolution 321

- 18.1 **Reconstructing the Stories of Life** 322
 - Fossilized Remains and Ancient DNA Serve as Pieces of the Puzzle 322
 - Systematics Assembles the Stories of Life 322
- 18.2 **Fossil Evidence** 325
 - Geology Determines a Timescale for Ancient Life-Forms 325
 - Fossils Are Evidence Set in Stone 327
 - The Age of a Fossil Can Be Relative or Absolute 331
- 18.3 **Structural Evidence** 332
 - Anatomical Comparisons Suggest Evolutionary Relationships 332
 - Vestigial Structures Reflect the Past 334
 - Embryos Provide Evolutionary Clues 335

18.4 Molecular Evidence 335

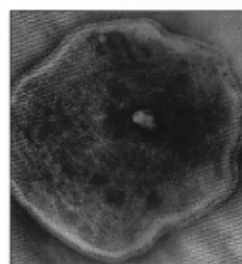

- Chromosome Comparisons Indicate Degrees of Similarity 336
- Proteins' Amino Acid Sequences Shed Light on Relatedness 337
- Nucleotide Sequences in DNA Provide More Information 338
- Molecular Clocks Allow Estimates of Species Divergence 339

18.5 Reconciling the Evidence 340

Chapter 19

The Origin and History of Life 343

- 19.1 **Life's Origins** 344
 - The Early Earth Was an Inhospitable Place 344
 - Prebiotic Simulations Attempted to Show How Life Arose 345
- 19.2 **The Origins of Replication and Metabolism** 348
 - An RNA World May Have Preceded Cellular Life 348
 - Evolution of Metabolic Functions May Have Given Rise to Self-Sufficiency 349
- 19.3 **The Emergence of Cells** 352
- 19.4 **The Ediacarans** 354
- 19.5 **The Paleozoic Era: Life "Explodes"** 355
- 19.6 **The Mesozoic Era: Reptiles and Flowering Plants** 357
- 19.7 **The Cenozoic Era: Mammalian Radiation** 359
- 19.8 **The Evolution of Humans** 361
 - Hominoids Were Ancestors of Humans and Apes 361
 - Hominids Were Ancestors of Humans Only 361

UNIT 4

The Diversity of Life

Chapter 20

Viruses 367

- 20.1 **The Discovery and Study of Viruses** 368
 - Viruses Could Pass Through Filters and Still Cause Disease 368
 - Viruses Are Grown for Study in Cell Cultures 368
- 20.2 **Viral Structure** 370
- 20.3 **Viral Reproduction Within Cells** 370
 - Viruses Bind to Target Cells and Introduce Genetic Material 370
 - Viruses Exhibit Two Replication Strategies 372
 - The Lytic Pathway Leads to Cell Rupture 372
 - The Lysogenic Pathway Involves Integration into Host DNA 375
- 20.4 **Cell Death and Symptoms of Infection** 375
 - Viruses Infect Particular Cells of Certain Species 376
 - Viruses May Move to New Species 378
 - Combating Viruses Is a Challenge 379

20.5 Other Noncellular Infectious Agents 379

- Viroids Are Infectious RNA Molecules 379
- Prions Are Altered Proteins 380

Chapter 21**Bacteria and Archaea 385****21.1 Prokaryotes: A Success Story 386**

- Prokaryotes Changed the Earth 386
- Bacteria and Archaea Exhibit Vast Diversity and Exist in Huge Numbers 386

21.2 Parts of a Prokaryotic Cell 388

- Internal Structures Are Simple Compared to Eukaryotes 388
- External Structures Include Protective Layers and Extensions 389

21.3 Classification of Prokaryotes 390

- Traditional Methods Consider Morphology, Physiology, and Habitat 391
- Molecular Data Reveal Evolutionary Relationships 392
- Archaea Are Clearly Different from Bacteria and Eukaryotes 392

21.4 Gene Transfer in Prokaryotes 394

- Binary Fission Provides Vertical Gene Transfer 394
- Horizontal Gene Transfer Occurs Three Ways 395

21.5 The Human Impact of Prokaryotes 397

- Bacteria Infect Humans and Cause Disease in Several Ways 397
- Bacteria Can Be Used as Bioweapons 399
- Industrial Microbiology Borrows Prokaryotes' Products and Processes 399

Chapter 22**Protista 403****22.1 Kingdom Protista: Between Simple and Complex 404****22.2 Basal Eukaryotes 405**

- Parabasalia and Diplomonadida Groups Lack Mitochondria 405
- Amoeboae, Slime Molds, Euglenids, and Kinetoplastids Contain Mitochondria 407

22.3 The Alveolates 409

- Dinoflagellates Are Whirling Protists 410
- Apicomplexans Display Specialized Organelle Complexes 411
- Ciliates Have Abundant Hairlike Structures for Motion 413

22.4 Ancient Stramenopiles: The Water Molds 414**22.5 Photosynthetic Stramenopiles 415**

- Diatoms Make Walls of Silica 415
- Brown Algae Include Edible Kelps 415
- Golden Algae Are Facultative Heterotrophs 416

22.6 The Red Algae 416**22.7 The Green Algae 417****Chapter 23****Plantae 421****23.1 Plant Characteristics and Origins 422**

- Plants Have Cell Walls and Are Largely Autotrophic 422
- Plants Likely Evolved from Green Algae 423

23.2 The Bryophytes: Liverworts, Hornworts, and Mosses 425

- Bryophytes Are Seedless, Nonvascular Plants 425
- Bryophyte Classification Includes Three Groups 425

23.3 Seedless Vascular Plants: Club Mosses, Horsetails, Whisk Ferns, and True Ferns 428

- Vascular Tissue Distinguishes These Plants from Bryophytes 428
- Four Groups Make Up the Seedless Vascular Plants 430

23.4 Gymnosperms: Vascular Plants with "Naked Seeds" 431

- The Gymnosperm Group Comprises Four Divisions 432
- The Pine Exemplifies the Gymnosperm Life Cycle 433

23.5 Angiosperms: Flowering Vascular Plants 435

- Angiosperms Are a Huge, Diverse Group 435
- Why Have Angiosperms Been So Successful? 435

Chapter 24**Fungi 443****24.1 Fungal Characteristics and Origins 444**

- Fungi Are Heterotrophs with Cell Walls of Chitin 444
- Fungal Anatomy Includes the Thallus and Fruiting Bodies 444
- Fungi and Animals Diverged from a Common Ancestor 447

24.2 Chytridiomycetes: Flagellated Fungi 448**24.3 Zygomycetes: The Prolific Molds 448****24.4 Ascomycetes: Sac Fungi 450****24.5 Basidiomycetes: The Familiar Club Fungi 451****24.6 Fungal Symbiotic Relationships 452**

- Mycorrhizal Fungi Live in Association with Plant Roots 452
- Lichens Are Distinctive Dual Organisms 454
- Certain Ants, Bacteria, and Fungi Form a Complex Mutualism 457

Chapter 25**Animalia I—Sponges Through Echinoderms 461****25.1 Introduction to the Animals 462****25.2 Animal Characteristics 462**

- Animals Are Heterotrophic 463
- Animals May Be Categorized by Symmetry and Cephalization 463

25.3 Animal Reproduction and Development 464

- Embryonic Development Involves Generation of Tissue Layers 464
- The Two Major Animal Lineages Reflect Different Development Paths 464

25.4 Animal Classification 465**25.5 The Sponges (Porifera) 467****25.6 The Cnidarians (Cnidaria) 468**

- Cnidarians Have Radial Body Plans and True Tissues 468
- Corals Create a Unique Ecosystem 471

25.7 The Flatworms (Platyhelminthes) 471**25.8 The Mollusks (Mollusca) 473**

- 26.9 The Annelids (Annelida) 475**
- 26.10 The Roundworms (Nematoda) 476**
- 26.11 The Arthropods (Arthropoda) 478**
 - Arthropods Have Exoskeletons and Complex Organ Systems 478
 - Arthropods Exhibit Vast Diversity 479
- 26.12 The Echinoderms (Echinodermata) 482**
 - Echinoderms Exhibit Five-Part Symmetry and Endoskeletons 482
 - Echinoderms Have Left a Rich Fossil Record 483

Chapter 26

Animalia II—The Chordates 489

- 26.1 Chordate Characteristics and Origins 490**
- 26.2 Tunicates and Lancelets: The Protochordates 491**
 - Tunicate Larvae Reveal Chordate Characteristics 492
 - Lancelets Retain Chordate Characteristics Throughout Life 493
- 26.3 Introduction to the Vertebrates 494**
- 26.4 The Fishes 494**
 - Jawless Fishes Are Distinguished by What They Lack 496
 - Jawed Fishes Evolved with a Competitive Advantage 497
- 26.5 The Amphibians: Vertebrates with a Dual Lifestyle 500**
 - Amphibian Characteristics Reflect Adaptation to Life Out of Water 501
 - Amphibians Are Grouped into Three Orders 501
- 26.6 The Reptiles: Adapted to Fully Terrestrial Life 502**
- 26.7 The Birds: Adapted for Flight 505**
- 26.8 The Mammals: Animals That Suckle Their Young 508**

UNIT 5

Plant Life

Chapter 27

Plant Form and Function 515

- 27.1 Plant Tissue and Cell Types 516**
 - Meristems Contain Cells Capable of Rapid Division 516
 - Ground Tissue Cells Have Many Functions 517
 - Dermal Tissue Is the Plant's "Skin" 518
 - Vascular Tissue Transports Fluids and Solutes 519
- 27.2 Stems: Support for the Shoot System 522**
- 27.3 Leaves: Organs That Capture Energy 524**
 - Leaf Morphology Is Adapted to Function and Environment 524
 - Leaves Provide a Variety of Services 524

27.4 Roots: Anchors That Draw Water and Minerals 527

- Root Systems Occur in One of Two Main Forms 528
- Root Morphology Is Adapted to Underground Life and Water Intake 528

27.5 Secondary Plant Growth 531

- Vascular Cambium Produces New Xylem and Phloem 531
- Cork Cambium Generates New Tissues in the Outermost Bark Layer 534

Chapter 28

Plant Nutrition and Transport 537

- 28.1 Evolution of Complex Transport Systems 538**
- 28.2 Plant Essential Nutrients 538**
- 28.3 Nutrient Sources: Atmosphere and Soil 541**
 - Roots Tap Water and Dissolved Minerals 542
 - Plants Obtain Nitrogen as Nitrates or Ammonium Ions 542
- 28.4 Movement of Water Upward 543**
 - Water Vapor Is Lost Through Transpiration 543
 - Water Moves Through Xylem 543
 - Water Enters Plants via Roots 545
- 28.5 Movement of Phloem Sap to Nonphotosynthetic Tissues 546**
 - Phloem Sap Contains Organic Compounds, Minerals, and Water 546
 - The Pressure Flow Theory Explains Photosynthate Distribution 546

Chapter 29

Reproduction of Flowering Plants 551

- 29.1 Asexual Reproduction 552**
- 29.2 Sexual Reproduction 553**
 - Flowers Are Reproductive Organs 554
 - Gametes Form in Anthers and Ovaries 555
 - Pollination Occurs When Pollen Contacts a Receptive Stigma 558
 - Double Fertilization Yields Zygote and Endosperm 559
- 29.3 Seeds and Fruits 560**
 - Seed Development Proceeds Until a Signal Initiates Dormancy 561
 - Fruits Form in Response to the Developing Seed 561
- 29.4 Seed Dispersal and Germination 563**
 - Dispersal Strategies Can Move Seeds Long Distances 564
 - Germination Begins the Cycle Anew 564

Chapter 30

Plant Responses to Stimuli 569

- 30.1 The Influence of Hormones on Plant Growth 570**
 - Auxins Cause Growth Toward Light 570
 - Gibberellins Cause Shoot Elongation 571
 - Cytokinins Promote Cell Division 572
 - Ethylene Is a Ripening and Aging Hormone 573
 - Abscissic Acid Inhibits Other Hormones and Causes Leaves to Drop 574

- 30.2 Plant Movements: Motion Without Muscles 574**
- Phototropism Is Movement Toward Unidirectional Light 574
 - Gravitropism Is a Response to the Direction of Gravity 575
 - Thigmotropism Results from Direct Contact 576
 - Nastic Movements Have Protective and Adaptive Benefits 576
- 30.3 Plant Responses to Seasonal Changes 579**
- Flowering Is a Response to the Photoperiod 579
 - Plants Track Darkness, Not Light 579
 - Phytochrome, a Blue Pigment, Controls Photoperiodism 580
 - Phytochrome Affects Other Plant Responses 581
 - Plants Undergo Seasonal Cycles of Aging and Dormancy 582
- 30.4 Plant Responses to the Daily Cycle 583**
- Control of Circadian Rhythms Is Largely a Mystery 583
 - Solar Tracking Is a Circadian Rhythm 583

UNIT 6

Animal Life

Chapter 31

Animal Tissues and Organ Systems 589

- 31.1 Overview of Animal Tissues 590**
- 31.2 Epithelial Tissue: Cells in Layers 591**
- 31.3 Connective Tissue 591**
- Loose Connective Tissue Holds Things Together 592
 - Blood Has a Fluid Matrix 592
 - Cartilage Supports and Cushions 592
 - Bone Contains Mineral Deposits 592
- 31.4 Nervous Tissue 592**
- 31.5 Muscle Tissue 594**
- 31.6 Tissues and Organs: The Animal Body 594**
- Tissues and Organs Increased in Complexity with Evolution 594
 - Human Organ Systems Illustrate Distinctive and Coordinated Functions 596
- 31.7 Organ Systems and Homeostasis 598**
- 31.8 The Integument—A Sample Organ System 599**
- Skin Contains Many Layers 600
 - Animal Integument Includes Adaptive Specializations 602

Chapter 32

The Nervous System 609

- 32.1 Communication and Homeostasis 610**
- 32.2 Neurons 611**
- Neuron Anatomy Includes Extensions for Distance 611
 - Neurons Exhibit Different Functions 611

- 32.3 The Action Potential and Nerve Impulses 613**
- A Neuron at Rest Has a Negative Charge 613
 - Resting Potential Is a Balance Between Gradients 614
 - A Nerve Impulse Is a Wave of Depolarization 614
- 32.4 The Role of Myelin in Impulse Conduction 616**
- 32.5 Neurotransmitters: Communication Between Cells 617**
- Many Substances Act as Neurotransmitters 617
 - Neurotransmitters Act at Synapses 618
 - Neurotransmitters Must Be Removed from the Synapse 619
- 32.6 Integration of Incoming Messages 620**
- 32.7 Evolutionary Trends in Nervous Systems 621**
- Invertebrates Have Nerve Nets, Ladders, or Simple Brains 622
 - Vertebrates Have Central and Peripheral Nervous Systems 623
- 32.8 The Human Central Nervous System 624**
- The Spinal Cord Runs from the Brain Through the Vertebrae 624
 - The Brain Has Three Main Regions 626
- 32.9 The Cerebrum 628**
- 32.10 Memory 631**
- 32.11 The Human Peripheral Nervous System 631**
- The Somatic Nervous System: Voluntary Responses 631
 - The Autonomic Nervous System: Involuntary Control 631
- 32.12 Protection of the Nervous System 633**

Chapter 33

The Senses 637

- 33.1 Sensory Systems and Adaptation 638**
- 33.2 Principles Underlying Sensory Systems 639**
- Sensory Receptors Detect, Transduce, and Amplify Stimuli 639
 - Sensory Systems Adapt to Strong Stimuli 640
 - Receptors Are Classified According to Type of Stimulus 640
- 33.3 Chemoreception 641**
- Invertebrate Chemoreception May Involve Elaborate Structures 641
 - Vertebrate Chemoreception Focuses on Smell and Taste 641
 - The Sense of Smell in Terrestrial Vertebrates Reacts to Airborne Molecules 642
 - The Sense of Taste Combines with Smell in the Perception of Flavor 642
- 33.4 Photoreception 644**
- Invertebrate Photoreception Ranges from Simple Light-Sensing Structures to Highly Complex Eyes 644
 - Vertebrate Eyes Focus Images 645
 - The Visual Cortex Integrates Information 648
- 33.5 Mechanoreception 649**
- Invertebrates Exhibit Well-Developed Mechanoreceptor Systems 649
 - Vertebrate Organs of Hearing Respond to Vibration in Air or Water 650
 - Equilibrium and Balance Are Detected by the Inner Ear 652
 - The Sense of Touch Includes Contact, Temperature, and Pain 652

Chapter 34

The Endocrine System 657

34.1 Overview of Endocrine Systems and Hormones 658

- Endocrine Systems May Have Evolved from Single Specialized Cells 658
- Endocrine System Components Include Secreting Cells, Hormonal Products, and Target Cells 658

34.2 How Hormones Exert Their Effects 659

- Peptide Hormones Bind to Cell Surface Receptors 660
- Steroid Hormones Bind to Receptors Inside Cells 660
- Feedback Loops Control Hormone Levels 661

34.3 Hormones in Invertebrates 662

34.4 Hormones and Glands in Vertebrates 662

- Sexual Cycles Vary Widely—Rabbits Are Always Ready 662
- The Hypothalamus and Pituitary Are “Master Glands” 664

34.5 The Human Pituitary: Two Glands in One 667

- The Anterior Pituitary Produces Many Different Hormones 667
- The Posterior Pituitary Produces ADH and Oxytocin 667
- The Intermediate Pituitary Produces MSH 668

34.6 Glands That Regulate Human Metabolism 668

- The Thyroid Gland Sets the Metabolic Pace 668
- The Parathyroid Glands Control Calcium Level 669
- The Adrenal Glands Secrete Catecholamines and Steroid Hormones 670
- The Pancreas Regulates Nutrient Utilization 671
- The Pineal Gland Secretes Melatonin 672

34.7 Endocrine Control of Human Reproduction 673

34.8 Prostaglandins and Localized Control 674

Chapter 35

The Musculoskeletal System 677

35.1 Overview of Musculoskeletons and Their Functions 678

35.2 Types of Skeletons 679

- Hydrostatic Skeletons Consist of Constrained Fluid 679
- Exoskeletons Protect from the Outside 679
- Endoskeletons Support, Protect, and Allow Movement 680

35.3 Structure of the Vertebrate Skeleton 681

- The Axial Skeleton Provides Support and Protection 682
- The Appendicular Skeleton Is Adapted for Movement in Space 683

35.4 Cells and Tissues of the Vertebrate Skeleton 683

- Cartilage Allows Smooth Movement 683
- Bone Combines Collagen and Minerals 684
- Bones Are Both Solid and Porous 685

35.5 Muscle Diversity 686

35.6 Vertebrate Muscle Cell Types 687

35.7 The Structure of Skeletal Muscle 688

- Muscle Fibers Are Packed with Myofibrils 689
- Other Protein Components Are Vital 691

35.8 The Mechanism of Muscle Contraction 692

- Sliding Filaments Generate Movement 692
- ATP Powers Contraction and Must Be Replenished 692
- Fibers May Be Classified by Twitch Speed 693
- Whole Muscle Response Is Coordinated by Two Integrated Mechanisms 694

35.9 Skeletal Muscle and Bone Function Together 695

- Joints Allow Movement 695
- Exercise Strengthens Muscles and Bones 695

Chapter 36

The Circulatory System 701

36.1 Overview of Circulatory Systems 702

- Circulatory Systems Are Open or Closed 702
- Respiratory Pigments Carry Additional Oxygen 703

36.2 The Evolution of Vertebrate Circulatory Systems 703

- Fishes Have a Two-Chambered Heart 703
- Amphibians and Reptiles Have Pulmonary and Systemic Circulation Paths 704
- Birds and Mammals Exhibit Four-Chambered Hearts 704
- The Human Circulatory System Has Features Common to Most Mammals 705

36.3 The Human Heart 706

- Heart Structure Reflects Its Function as a Powerful Pump 706
- The Heart Moves Blood Through Two Circuits 706
- The Cardiac Cycle Alternates Between Contraction and Relaxation 707

36.4 Blood Vessels 707

- Arteries Lead Away from the Heart 707
- Capillaries Are the Sites of Gas Exchange 709
- Veins Return Blood to the Heart 709
- Blood Vessels Form the Circulation Pathway 709

36.5 Blood Pressure 710

- Pressure Varies in Different Regions of the Circulatory System 711
- Blood Pressure Is Under Constant Regulation 711

36.6 The Composition of Human Blood 711

- Red Blood Cells Take Up and Release Oxygen 712
- White Blood Cells Are Roaming Defenders 713
- Platelets Respond to Vessel Damage 713

36.7 Exercise and Cardiovascular Fitness 716

36.8 The Lymphatic System and Its Components 717

Chapter 37

The Respiratory System 721

37.1 Respiration and Gas Exchange 722

- Respiration Occurs at Three Levels 722
- Breathing Mechanisms Must Adapt to the Surrounding Medium 723

37.2 Invertebrate Respiration 723

- Smaller Organisms Can Exchange Gases Through the Body Surface 723
- Tracheal Systems Promote Respiration in Terrestrial Arthropods 724

- 37.3 Vertebrate Respiration 724**
- Gills Provide Aquatic Vertebrates with Adequate Surface Area 724
 - The Evolution of Lungs Allowed Vertebrates to Move onto Land 725
- 37.4 Components of the Human Respiratory System 727**
- Respiratory System Structures Transport Air 727
 - Alveoli Are the Sites of Gas Exchange 730
- 37.5 Human Respiratory Functions 732**
- Breathing Is a Cyclic Process 732
 - Concentration Gradients Drive Gas Exchange 733
 - Carbon Monoxide Can Bind to Hemoglobin with Deadly Results 734
- 37.6 Control of CO₂ Respiration 734**
- Blood CO₂ Levels Regulate Breathing Rate 734
 - Altitude Sickness Is Caused by Lack of Oxygen 735

Chapter 38

Digestion and Nutrition 739

- 38.1 The Art and Evolution of Eating 740**
- 38.2 Digestive Diversity 742**
- Digestion Takes Place in Specialized Compartments 742
 - From Robins to Rabbits, Digestive Systems Exhibit Adaptations to Diet 743
- 38.3 Overview of the Human Digestive System 744**
- 38.4 The Mouth and the Esophagus: Beginning of the Process 747**
- 38.5 The Stomach: Further Processing 748**
- 38.6 The Small Intestine and Nutrient Absorption 750**
- Hormones Coordinate Small Intestine Processes 751
 - Nutrient Absorption Occurs at Villi and Microvilli 752
- 38.7 The Large Intestine: End of the Process 753**
- 38.8 The Roles of the Pancreas, Liver, and Gallbladder 754**
- 38.9 Human Nutrition 754**
- A Variety of Nutrients Are Necessary for Good Nutrition 755
 - Nutrient Deficiencies Can Be Hidden or Obvious 756

Chapter 39

Regulation of Temperature and Body Fluids 761

- 39.1 Temperature Regulation 762**
- Heat Sources May Be External or Internal 762
 - Adaptations to Cold Seek to Maintain Core Temperature 763
 - Adaptations to Heat Include Evaporative Cooling and Other Strategies 764
- 39.2 Maintaining Water and Ion Balance 765**
- 39.3 Elimination of Nitrogenous Wastes 766**
- 39.4 Overview of the Human Urinary System 768**

- 39.5 The Kidney's Complex Function 769**
- The Glomerular Capsule Filters Blood 770
 - The Proximal Convoluted Tubule Recovers Valuable Substances 771
 - The Nephron Loop Conserves Water and Exchanges Ions with Blood 772
 - The Distal Convoluted Tubule Regulates Filtrate Composition 772
 - The Collecting Duct Conserves More Water 772
- 39.6 Control of Kidney Function 773**

Chapter 40

The Immune System 777

- 40.1 The Evolution of Immunity 778**
- Invertebrate Immune Response Is Innate Only 778
 - Vertebrate Immune Response Is Both Innate and Adaptive 779
- 40.2 Nonspecific, Innate Defenses 780**
- 40.3 Specific, Adaptive Defenses 782**
- Antigen-Presenting Cells Begin the Immune Response 782
 - B Cells Produce Antibodies 783
 - Vaccines Jump-Start Immunity 784
 - Antibody Structure Allows Specific Recognition 784
 - Monoclonal Antibodies Make Use of Antibody Specificity 785
 - T Cells Stimulate, Secrete, Attack, and Coordinate 787
- 40.4 The Human Immune System Throughout Life 790**
- Immunity Decreases During Pregnancy to Prevent Rejection of the Fetus 790
 - Passive Immunity Protects the Newborn 790
- 40.5 The Unhealthy Immune System 791**
- Immune System Breakdown Leaves the Body Vulnerable to Infection 791
 - In Autoimmune Diseases, the Body Attacks Itself 792
 - Allergies Are Cases of Misdirected Response 793

Chapter 41

Human Reproduction and Development 797

- 41.1 The History of Embryology and Developmental Biology 798**
- Embryology Seeks to Discover Processes from Fertilization to Birth 798
 - Early Experiments Indicated Complex Cell Differentiation Work 800
 - Selective Gene Activation Produces Specialized Cell Types 800
 - Human Prenatal Development Is Divided into Three Stages 801
- 41.2 The Male Reproductive System: Geared for Billions of Sperm 804**
- 41.3 The Female Reproductive System: One Egg at a Time 806**
- 41.4 Fertilization and Cleavage 806**
- Sperm Seek an Oocyte to Join Genetic Material 806
 - During Cleavage, Cells Divide Rapidly 810
- 41.5 Implantation and Gastrulation: Pregnancy Begins 810**
- The Trophoblast Layer Is Responsible for Implantation 810
 - During Gastrulation, Tissues Begin to Form 810
- 41.6 Organogenesis: The Human Body Takes Shape 810**

- 41.7 Structures That Support the Embryo 813
- 41.8 The Fetal Period 814
- 41.9 Labor and Birth 815
- 41.10 Growth and Development After Birth 816
 - During the Early Years, Many Systems Are Not Yet Mature 816
 - Aging Is Both a Passive and an Active Process 816
- 41.11 The Human Life Span 820

UNIT 7

Behavior and Ecology

Chapter 42

Animal Behavior 825

- 42.1 Behavior: Genes Plus Experience 826
- 42.2 Innate Behavior 828
 - Fixed Action Patterns Are Automatic Responses 828
 - Releasers Trigger Intraspecific Responses 828
- 42.3 Learned Behavior 829
 - Habituation Lessens Response 830
 - Classical Conditioning Is an Old Response to a New Stimulus 830
 - Operant Conditioning Relies on Reinforcement 830
 - Imprinting Occurs in a Short Timeframe 830
 - Insight and Latent Learning Require Reasoning and Experience 831
- 42.4 Orientation and Navigation 831
 - Migration Can Cover Thousands of Miles 831
 - Homing Is a Mysterious Ability 833
- 42.5 Aggressive Behavior 834
 - Territoriality Secures Resources, Even for Rabbits 834
 - Dominance Hierarchies Minimize Aggression 834
 - Cannibalism May Carry Selective Advantages 835
- 42.6 Mating Behavior 835
 - Mating Systems Vary Widely and Have Different Adaptive Values 835
 - Mating Behavior Is Diverse and Often Elaborate 836
- 42.7 Altruistic Behavior: Helping One's Kin 837
- 42.8 Advantages and Disadvantages of Group Living 838
 - Groups Provide More Favorable Surroundings 839
 - Groups Have Better Defense from Predators 839
 - Reproductive Success Is Enhanced in Groups 839
 - Foraging in Groups Is More Efficient 840

- Learning Is Improved in Social-Group Settings 840
- Disadvantages Include Depletion of Food Supply and Spread of Disease 840

42.9 The Influence of Environmental Conditions 840

42.10 The Role of Communication 841

- Chemical Signals Act Both Close Up and at a Distance 841
- Sound Sends Signals Through Air and Water 841
- Touch Is a Close-Up Way of Bonding 842
- Vision Receives Behavioral Signals 842

42.11 Three Animal Societies 843

- Snapping Shrimp Live Colonially in Sponges 843
- Naked Mole Rats Fulfill Roles in Their Community 844
- Honeybees Exhibit Complex Communication Behaviors 844

Chapter 43

Populations 849

43.1 Overview of Populations 850

- Ecology Is the Study of Organisms and Their Environment 850
- Populations Exhibit Measurable Characteristics 850

43.2 How Populations Grow 853

- Reproductive Characteristics Influence Population Growth 853
- Growth Is Exponential When Resources Are Unlimited 853

43.3 Factors That Limit Population Size 856

- Population Growth Eventually Slows 856
- Crowding, Competition, Predation, and Pathogens Limit Population Size 857
- Environmental Disasters Kill Regardless of Population Size 858
- Populations May Enter a Boom-and-Bust Cycle 858
- Natural Selection Influences Population Growth 859

43.4 Human Population Growth 859

- Average Fertility Has Been Declining 860
- Life Span Is Increasing 862
- Cultural Factors Play a Role in Population Growth and Limits 862

Chapter 44

Communities and Ecosystems 865

44.1 Overview of Biotic Communities 866

- Interspecific Competition Prevents Species from Occupying the Same Niche 866
- Symbiosis and Predation Involve Two-Way and One-Way Exchanges 867

44.2 Succession: Change Over Time 870

- Primary Succession Is the Development of a New Community 870
- Secondary Succession Occurs When a Community Has Been Disturbed 871
- Succession Can Be a Complex Process 872

44.3 Ecosystems 873

- Ecosystems Are Open Systems with Many Interactions 873
- Energy Flows Through an Ecosystem 875
- Ecological Pyramids Describe Ecosystem Characteristics 875

- 44.4 Biogeochemical Cycles 878**
 - Water Undergoes Evaporation and Condensation 878
 - Carbon Moves Through Carbon Dioxide and Organic Molecules 879
 - Nitrogen's Cycle Includes Fixation by Microbes 880
 - Phosphorus Has Organic and Inorganic Stages 881
- 44.5 Food Webs and Chemical Magnification 882**
- 44.6 A Sampling of Ecosystems 882**
 - The Sea Surface Microlayer Is an Ecosystem of Microbes 882
 - Vernal Pools Are Transient Ecosystems 884
 - The Niagara Escarpment Is a Vertical Ecosystem 885
 - Fjord Ecosystems Exist Where Freshwater Meets Seawater 885

Chapter 45

Biomes and Aquatic Ecosystems 889

- 45.1 Overview of Biomes and the Role of Climate 890**
- 45.2 Tropical Biomes 893**
 - Tropical Rain Forests Are Constantly Warm and Wet 893
 - Tropical Dry Forests Undergo Wet and Dry Cycles 894
 - Tropical Savannas Are Grasslands 895
- 45.3 Desert Biomes 896**
- 45.4 Temperate Biomes 897**
 - Temperate Grasslands Lack Moisture for Trees 898
 - Temperate Forests Have Abundant Water and Seasonal Changes 898
- 45.5 Northern Biomes 900**
 - Taiga Is the Far Northern Forest 900
 - Tundra Is a Cold Region of Hardy Low Shrubs 901
- 45.6 Freshwater Ecosystems 902**
 - Lakes and Ponds Have Vertical and Horizontal Communities 902
 - Rivers and Streams Provide a Moving Environment 903
- 45.7 Marine Ecosystems 904**
 - Estuaries Are Rich, Changeable Regions 904
 - Mangrove Swamps Contain Salt-Adapted Species 904
 - The Intertidal Zone Favors Organisms That Can Hold Tight or Dig Deep 904
 - Coral Reefs Provide Habitat for Vast Numbers of Organisms 906
 - The Oceans Are a Vast Ecosystem 906

Chapter 46

Environmental Challenges 911

- 46.1 Sustainability 912**
- 46.2 Air Pollution 913**
- 46.3 Acid Deposition 914**
 - Acid Deposition Has Far-Ranging Effects 914
 - Air Quality Can Be Improved Through Implementation of Standards 916
- 46.4 Ozone Thinning and Global Warming 916**
 - Stratospheric Ozone Can Be Broken Down by CFC Emissions 916
 - Global Warming Results from Effects of Greenhouse Gases 917

- 46.5 Deforestation and the Loss of Food Webs 919**
- 46.6 Desertification and the Expansion of Lifelessness 920**
- 46.7 The Global Water Crisis 922**
 - Chemical Pollution Destroys Communities 922
 - Alteration of Waterways Can Have Unintended Effects 923
 - Estuaries Are Vulnerable to Pollution and Development 923
 - Coral Reefs Are Critically Endangered 924
 - Ocean Pollution Is Increasing 924
- 46.8 Loss of Biodiversity 925**
 - Diversity Contributes to Ecosystem Stability 925
 - Biological Invaders Lessen Diversity and Use Up Resources 926
- 46.9 The Resiliency of Life 927**

Appendix A

Answers to Student Study Guide Problems 931

Appendix B

More on Genetics 946

Appendix C

Units of Measurement 950

Appendix D

Periodic Table of Elements 952

Appendix E

Amino Acid Structures 953

Glossary 954

Credits 976

Index 981
