

BRIEF CONTENTS

Preface x

Prologue xiii

- 1 Variation in Populations 1
- 2 Darwinian Scheme of Evolution 12
- 3 Heritable Variation 23
- 4 Mutation 43
- 5 Genetic Equilibrium 61
- 6 Concept of Selection 67
- 7 Selection in Action 82
- 8 Balanced Polymorphism 94
- 9 Genetic Drift and Gene Flow 110
- 10 Races and Species 122
- 11 Instantaneous Speciation 135

12 Adaptive Radiation 142

13 Major Adaptive Radiations 152

14 Origin of Life 166

15 Molecular Evolution 182

16 History of Life 197

17 Emergence of the Human Species 214

18 Natural Selection, Social Behavior, and
Cultural Evolution 237

Epilogue 248

Glossary 256

Index 271

CONTENTS

Preface x

Prologue: Evidence for Evolution xiii

CHAPTER 1 VARIATION IN POPULATIONS 1

Environmental Modifications 3
Lamarckism 5
Heritable Variation 7
Hypothetico-Deductive Reasoning 9

CHAPTER 2 DARWINIAN SCHEME OF EVOLUTION 12

Mechanism of Evolution 15
Darwin's Natural Selection 17
Differential Reproduction 21
Evolution Defined 21

CHAPTER 3 HERITABLE VARIATION 23

Mendel's Principle of Segregation 24
Application of Mendelian Principles 27
Chromosomal Basis of Heredity 28
Mitosis and Meiosis 31
Mendel and the Chromosomal Theory of Heredity 35
Mendel's Principle of Independent Assortment 36
Three or More Gene Pairs 36
Significance of Genetic Recombination 38
Linkage and Crossing Over 40

CHAPTER 4 MUTATION 43

Causes of Mutation 43
Chemical Nature of the Gene 45
Replication of DNA 49
Molecular Mechanism of Spontaneous Mutation 50
Language of Life 50
Transcription of DNA 53
Frequency of Mutations in Human Disorders 55
Evolutionary Consequences of Mutations 57
Chromosomal Aberrations and Pregnancy Loss 58

CHAPTER 5 GENETIC EQUILIBRIUM 61

Mendelian Inheritance 61
Random Mating 62
Gene Frequencies 64
Hardy-Weinberg Equilibrium 64
Estimating the Frequency of Heterozygotes 65
Implications 66

CHAPTER 6 CONCEPT OF SELECTION 67

Selection Against Recessive Defects 67
Significance of the Heterozygote 70
Interplay of Mutation and Selection 70
Partial Selection 71
Selection Against Dominant Defects 73
Concealed Variability in Natural Populations 75

Genetic Load in Human Populations	75
General Effects of Selection	76
Natural Selection and Pregnancy Loss	77
Sexual Selection	78

CHAPTER 7

SELECTION IN ACTION 82

Industrial Melanism	82
Cancer Cell Heterogeneity	84
Selection for Resistance	85
Multiple Antibiotic Resistance	87
Recombinant DNA	89
Prudent Use of Antibiotics	91
Evolutionary Implications	92

CHAPTER 8

BALANCED POLYMORPHISM 94

Sickle-Cell Anemia	94
Sickle-Cell Hemoglobin	95
Theory of Balanced Polymorphism	97
Superiority of the Heterozygotes	100
Relaxed Selection	101
Tay-Sachs Disease	102
Cystic Fibrosis	103
Selection Against the Heterozygote	104
The Control of Rh Disease	108
Implications of Balanced Polymorphism	109

CHAPTER 9

GENETIC DRIFT AND GENE FLOW 110

Role of Genetic Drift	110
Theory of Genetic Drift	112
Founder Effect	113
Religious Isolates	114
Amish of Pennsylvania	116
Consanguinity and Genetic Drift	117
Gene Flow	118
European Genes in African Americans	119

CHAPTER 10

RACES AND SPECIES 122

Variation Between Populations	122
Subspecies	123

The Species Concept	125
Formation of Species	126
Nomenclature	128
Reproductive Isolating Mechanisms	129
Origin of Isolating Mechanisms	131
Humans: A Single Variable Species	132
Microevolution and Macroevolution	132
Punctuated Equilibrium	133

CHAPTER 11

INSTANTANEOUS SPECIATION 135

Polyploidy in Nature	135
Wheat	138
Origin of Wheat Species	139
Mechanism of Speciation of Polyploidy	139
Experimental Verification	141

CHAPTER 12

ADAPTIVE RADIATION 142

Galápagos Islands	142
Darwin's Finches	144
Factors in Diversification	145
Competitive Exclusion	148
Coexistence	148
Classification	150

CHAPTER 13

MAJOR ADAPTIVE RADIATIONS 152

Transition to Land	152
Conquest of Land	155
Adaptive Radiation of Reptiles	159
Extinction and Replacement	163

CHAPTER 14

ORIGIN OF LIFE 166

What Is Life?	167
Primitive Earth	167
Experimental Synthesis of Organic Compounds	168
Life's Beginnings	169
Autotrophic Existence	172
Prokaryotic and Eukaryotic Cells	172
Organelles and Evolution	174

Classification of Organisms	176
Deep-sea Vents	179
Extraterrestrial Origins	180

CHAPTER 15

MOLECULAR EVOLUTION 182

Neutral Theory of Molecular Evolution	182
Cytochrome <i>c</i>	183
Molecular Clock	184
Gene Duplication	185
Evolutionary History of Hemoglobin	187
Pseudogenes	188
Homeotic Genes	189
Ocular Malformations and Evolution	192
Multilegged Frogs Revisited	193
Mitochondrial Eve	194
Y-Chromosome Adam	195

CHAPTER 16

HISTORY OF LIFE 197

Geologic Ages	198
Fossil Record of Plants	200
Fossil Record of Animals	201
Convergence	203
The Plains-Dwelling Mammals	207
Evolutionary Stability	207
Mass Extinction	208
Holocene Extinction	209

CHAPTER 17

EMERGENCE OF THE HUMAN SPECIES 214

Primate Radiation	214
Adaptive Radiation of Humans	217

Forerunners of the Great Apes	217
Early Hominoids	218
Australopithecines: The First Hominids	221
Humans Emerge: <i>Homo Habilis</i>	225
Gathering-Hunting Way of Life	225
<i>Homo Erectus</i> : The Explorer	226
Flores Man	228
Evolution of Human Society	228
Status of the Neanderthals	230
Modern Humans: The Cro-Magnons	231
Origin of Modern Humans	232
Genomes of the Chimpanzees and Humans	233

CHAPTER 18

NATURAL SELECTION, SOCIAL BEHAVIOR, AND CULTURAL EVOLUTION 237

Group Selection	237
Kin Selection	238
Kin Selection in Humans	240
The Selfish Gene	242
Reciprocal Altruism	242
Parental Reproductive Strategies	243
Parent-Offspring Conflict	245
Memes	245
Cultural Evolution	246

EPILOGUE: THE CRUCIBLE OF EVOLUTION 248

Changing Worldviews	250
Scientific Literacy	250
Darwin in the Courts	251
Closing Commentary	254

Glossary	256
