Section I. Electron Transport Complexes 1

1. Visualizing Functional Flexibility by Three-Dimensional Electron Microscopy: Reconstructing Complex I of the Mitochondrial Respiratory Chain 3

Michael Radermacher

1. Introduction	4
2. Random Conical Reconstruction	6
3. Application of the Techniques to Complex I From <i>Yarrowia Lipolytica</i>	16
4. Conclusion	23
Acknowledgments	23
References	23

2. Correlated Light and Electron Microscopy/Electron Tomography of Mitochondria *In Situ* 29

Guy A. Perkins, Mei G. Sun, and Terrence G. Frey

1. Introduction	30
2. Light Microscopy	31
3. Electron Microscope Tomography	36
Acknowledgments	50
References	50

3. Studies of Complex I by Fourier Transform Infrared Spectroscopy 53

Douglas Marshall and Peter R. Rich

1. Spectroscopic Studies of Complex I	54
2. FTIR Difference Spectroscopy and Its Application to Complex I	56
3. Preparation of Rehydrated Layers of Complex I for ATR-FTIR Spectroscopy	59
4. Analysis of Rehydrated Complex I Layers by Perfusion-Induced ATR-FTIR Difference Spectroscopy	62

5. Analysis of Rehydrated Complex I Layers by Electrochemically-Induced ATR-FTIR Difference Spectroscopy	64
6. Model Compounds and Strategies for Interpretation	64
7. Example IR Difference Spectra of Complex I	69
Acknowledgment	70
References	70
4. Electron Transfer in Respiratory Complexes Resolved by an Ultra-Fast Freeze-Quench Approach	75
Nikolai P. Belevich, Marina L. Verkhovskaya, and Michael I. Verkhovsky	
1. Introduction	76
2. Ultra-Fast Freeze-Quench Setup	79
3. Sample Preparation	82
4. Calibration of the Freeze-Quench Setup	85
5. Application of Freeze-Quench Approach for the Monitoring of Complex I Reduction by NADH	85
References	92
5. Use of Ruthenium Photooxidation Techniques to Study Electron Transfer in the Cytochrome bc_1 Complex	95
Francis Millett and Bill Durham	
1. Introduction	96
2. Design and Synthesis of Ruthenium-Labeled Proteins	98
3. Measurement of Interprotein Electron Transfer in a Ruthenium-Labeled Protein	100
4. Measurement of Electron Transfer between Ru_2 -39-Cc and Cytochrome bc_1	102
5. Measurement of Electron Transfer within the Cytochrome bc_1 Complex	105
Acknowledgments	107
References	107
6. Mass Spectrometric Characterization of the Thirteen Subunits of Bovine Respiratory Complexes that are Encoded in Mitochondrial DNA	111
John E. Walker, Joe Carroll, Matthew C. Altman, and Ian M. Fearnley	
1. Introduction	112
2. Analysis of Mitochondrial Membranes for mt-Proteins	115
3. Analysis of Respiratory Complexes for mt-Proteins	117
4. Mass Spectrometric Analysis of mt-Proteins	120

5. Conclusions and Perspectives	125
References	128
7. Tracing Human Mitochondrial Complex I Assembly by Use of GFP-Tagged Subunits	133
Cindy E. J. Dieteren, Werner J. H. Koopman, and Leo G. J. Nijtmans	
1. Introduction	134
2. Selection of Complex I Subunit for GFP Labeling	136
3. Creation of Inducible Cell Line Expressing AcGFP1-tagged NDUFS3	137
4. Tracing AcGFP1-Labeled NDUFS3 on BN-PAGE	143
Acknowledgment	149
References	149
8. Two-Dimensional Native Electrophoresis for Fluorescent and Functional Assays of Mitochondrial Complexes	153
Zibiernisha Wumaier, Esther Nübel, Ilka Wittig, and Hermann Schagger	
1. Introduction	154
2. Materials and Methods	155
3. Analysis of Mitochondrial Supercomplexes	161
References	167
9. Reliable Assay for Measuring Complex I Activity in Human Blood Lymphocytes and Skin Fibroblasts	169
L. Elly. A. de Wit and Wim Sluiter	
1. Introduction	170
2. Complex I Activity Measurement	171
3. Characteristics of the Complex I Assay	175
References	179
10. Purification of the Cytochrome c Reductase/Cytochrome c Oxidase Super Complex of Yeast Mitochondria	183
Hans-Peter Braun, Stephanie Sunderhaus, Egbert J. Boekema, and Roman Kouřil	
1. Introduction	184
2. Isolation of the III + IV Supercomplex	184
3. Characterization of the III + IV Supercomplex by EM	187
4. Perspectives	187
Acknowledgments	189
References	189

11. Supercomplex Organization of the Yeast Respiratory Chain Complexes and the ADP/ATP Carrier Proteins	191
Rosemary A. Stuart	
1. Introduction	192
2. Choice of the Detergent—Digitonin	198
3. Mitochondrial Solubilization and BN-PAGE/SDS-PAGE Analysis	199
4. Expression and Affinity Purification of a His-Tagged Aac2 Protein (HisAac2)	203
Acknowledgments	206
References	206
12. Controlled Expression of Iron-Sulfur Cluster Assembly Components for Respiratory Chain Complexes in Mammalian Cells	209
Oliver Stehling, Alex D. Sheftel, and Roland Lill	
1. Introduction	210
2. Depletion of Fe/S Cluster Assembly Components by RNA Interference	212
3. Analysis of Respiratory Complex Assembly	218
4. Analysis of Respiratory Complex Function	222
5. Concluding Remarks	228
Acknowledgments	228
References	228
13. Localization and Function of the 2Fe-2S Outer Mitochondrial Membrane Protein mitoNEET	233
Sandra E. Wiley, Matthew J. Rardin, and Jack E. Dixon	
1. Introduction	234
2. Purification of Highly Enriched Mitochondria from Rat Liver	235
3. Expression of Recombinant mitoNEET	240
4. <i>In Vitro</i> Analysis of Purified mitoNEET	243
References	245
14. Nucleotide-Dependent Iron-Sulfur Cluster Biogenesis of Endogenous and Imported Apoproteins in Isolated Intact Mitochondria	247
Boominathan Amutha, Donna M. Gordon, Andrew Dancis, and Debkumar Pain	
1. Introduction	248
2. Stock Solutions and Storage	250

3. Isolation and Purification of Mitochondria	251
4. Depletion of Endogenous Nucleotides in Isolated Mitochondria	252
5. Nucleotide-Dependent [Fe-S] Cluster Biogenesis of Endogenous Aconitase in Purified Mitochondria	253
6. [Fe-S] Cluster Biogenesis of Imported Apoferredoxin	258
7. Concluding Remarks and Perspectives	263
Acknowledgments	265
References	266
 15. Isolation of <i>Saccharomyces Cerevisiae</i> Mitochondria for Mössbauer, Epr, and Electronic Absorption Spectroscopic Analyses	 267
Paul A. Lindahl, Jessica Garber Morales, Ren Miao, and Gregory Holmes-Hampton	
1. Introduction	268
2. Large-Scale Growth of <i>S. Cerevisiae</i>	270
3. Anaerobic Isolation	272
4. Isolation Procedure	273
5. Characterization of Mitochondria	275
6. Determining The Absolute [Fe] and [Protein] in Mitochondria	275
7. Packing Samples into Spectroscopy Holders	277
8. Advances with This Approach	281
9. Summary	283
Acknowledgments	283
References	284
 16. The Use of Fluorescence Correlation Spectroscopy to Probe Mitochondrial Mobility and Intramatrix Protein Diffusion	 287
Peter H. G. M. Willems, Herman, G. Swarts, Mark A. Hink, and Werner J. H. Koopman	
1. Introduction	288
2. Principle of Fluorescence Correlation Spectroscopy	289
3. Performing FCS Experiments with mitoEYFP In Human Skin Fibroblasts	292
References	299
 17. Type II NADH: Quinone Oxidoreductases of <i>Plasmodium Falciparum</i> and <i>Mycobacterium Tuberculosis</i>: Kinetic and High-Throughput Assays	 303
Nicholas Fisher, Ashley J. Warman, Stephen A. Ward, and Giancarlo A. Biagini	
1. Introduction	304
2. Kinetic Assays	308

3. Endpoint Assay for HTS	315
4. Summary and Conclusions	318
Acknowledgments	318
References	319
18. Analysis of Respiratory Chain Complex Assembly with Radiolabeled Nuclear- and Mitochondrial-Encoded Subunits	321
Matthew McKenzie, Michael Lazarou, and Michael T. Ryan	
1. Introduction	322
2. Analysis of mtDNA-Encoded Subunit Assembly	324
3. Isolation of Crude Mitochondria From Cultured Cells	326
4. Mitochondrial Import and Assembly of Nuclear DNA-Encoded Subunits	326
5. Separation of Proteins with SDS-PAGE	331
6. Separation of Protein Complexes with Blue-Native PAGE	331
7. Separation of Individual Subunits From Their Complexes with BN-PAGE and SDS-PAGE in the Second Dimension	333
8. Processing and Analysis of Gels After Electrophoresis	334
Acknowledgments	337
References	338
Section II. Reactive Oxygen Species	341
19. Measuring Redox Changes to Mitochondrial Protein Thiols With Redox Difference Gel Electrophoresis (Redox-Dige)	343
Thomas R. Hurd, Andrew M. James, Kathryn S. Lilley, and Michael P. Murphy	
1. Introduction	344
2. Overview of Redox-Dige	345
3. Experimental Design	347
4. Protein Labeling and Sample Preparation	348
5. 2-D Gel Electrophoresis of Fluorescently Labeled Samples	351
6. Imaging of Fluorescently Labeled Protein on Gels	351
7. Analysis of Multiple Gels to Determine Statistically Significance of Redox Changes on Individual Proteins	353
8. Spot Excision From 2-D Gels	354
9. Protein Spot Identification by Mass Spectrometry	355
10. Limitations to Redox-Dige and Future Possible Adaptations	356
11. Comparison of Redox-Dige With Other "Redox Proteomic" Techniques	357
12. Concluding Remarks	358
References	358

20. Effects of Hepatitis C Core Protein on Mitochondrial Electron Transport and Production of Reactive Oxygen Species	363
Roosevelt V. Campbell, Yuanzheng Yang, Ting Wang, Aparna Rachamalla, Yanchun Li, Stanley J. Watowich, and Steven A. Weinman	
1. Introduction	364
2. Materials and Model Systems	365
3. HCV Core Protein Effects on Mitochondria <i>In Vitro</i>	369
4. Mitochondrial Effects of Viral Proteins in Cellular Systems	373
5. Conclusion	378
Acknowledgments	378
References	379
21. Paraquat-Induced Production of Reactive Oxygen Species in Brain Mitochondria	381
Derek A. Drechsel and Manisha Patel	
1. Introduction	382
2. Methods	383
3. Discussion	388
Acknowledgments	391
References	391
22. The Uptake and Interactions of the Redox Cycler Paraquat with Mitochondria	395
Helena M. Cochemé and Michael P. Murphy	
1. Introduction	396
2. Detection of the $PQ^{\bullet+}$ Radical	399
3. Detection of PQ	401
4. Assays for PQ-Associated Superoxide ($O_2^{\bullet-}$) Production	404
5. Uptake of PQ into Mitochondria	409
6. PQ Toxicity Screens in Yeast Deletion Libraries	413
7. Conclusions	414
Acknowledgments	415
References	415
23. Quantification of Superoxide Production by Mouse Brain and Skeletal Muscle Mitochondria	419
Dominika Malinska, Alexei P. Kudin, Grazyna Debska-Vielhaber, Stefan Vielhaber, and Wolfram S. Kunz	
1. Evaluation of Quantitative Methods for Detecting ROS Production	420

2. The Application of Quantitative Methods for Measurement of ROS Production to Identify the Contribution of Individual Sites to the Superoxide Production of Isolated Brain and Skeletal Muscle Mitochondria	428
Acknowledgments	436
References	436
24. Quantification, Localization, and Tissue Specificities of Mouse Mitochondrial Reactive Oxygen Species Production	439
Aaron M. Gusdon, Jing Chen, Tatyana V. Votyakova, and Clayton E. Mathews	
1. Introduction	440
2. Materials and Procedures for Isolation of Mouse Mitochondria	442
3. Materials and Procedures for Quantification of Reactive Oxygen Species (ROS) Production by Mouse Mitochondria	446
4. Reagents and Procedures for Evaluating ROS Production by Beta Cells	450
5. Concluding Remarks	453
Acknowledgments	453
References	454
25. Analysis of Electron Transfer and Superoxide Generation in the Cytochrome bc_1 Complex	459
Linda Yu, Shaoqing Yang, Ying Yin, Xiaowei Cen, Fei Zhou, Di Xia, and Chang-An Yu	
1. Introduction	460
2. Materials	461
3. Purification of the Cytochrome bc_1 Complex from Bovine Heart Submitochondrial Particles	462
4. Electron Transfer Activity in the Purified bc_1 Complex	465
5. Proton Translocation in the Purified bc_1 Complex	466
6. Superoxide Generation by the Purified bc_1 Complex	467
7. Comparison of $O_2^{\cdot -}$ Production by the bc_1 Complexes with Varying Electron Transfer Activities	468
Acknowledgments	470
References	471

26. Measurement of Superoxide Formation by Mitochondrial Complex I of <i>Yarrowia Lipolytica</i>	475
Stefan Dröse, Alexander Galkin, and Ulrich Brandt	
1. Introduction	476
2. Materials, Sample Preparation, and Purification of Complex I from <i>Yarrowia Lipolytica</i>	477
3. Detection of Superoxide ($O_2^{\bullet-}$) by Acetylated Cytochrome c	479
4. Detection of Hydrogen Peroxide by the Amplex Red/HRP Assay	484
5. Conclusions	487
References	488
27. An Improved Method for Introducing Point Mutations into the Mitochondrial Cytochrome <i>b</i> Gene to Facilitate Studying the Role of Cytochrome <i>b</i> in the Formation of Reactive Oxygen Species	491
Martina G. Ding, Christine A. Butler, Scott A. Saracco, Thomas D. Fox, François Godard, Jean-Paul di Rago, and Bernard L. Trumpower	
1. Introduction: The Role of Cytochrome <i>b</i> in Superoxide Anion Formation	492
2. Construction of Plasmid pSCSI Containing an ARG8 ^m Cassette Flanked by the Cytochrome <i>b</i> Gene 5'- and 3'-UTR Sequences	494
3. Construction of the Yeast Recipient Strain for Cytochrome <i>b</i> Mutations, YTE31, In which the Cytochrome <i>b</i> Gene is Replaced by Mitochondrially Encoded ARG8	495
4. Construction of the Template Vector, Plasmid pMD2, Containing an Intronless Cytochrome <i>b</i> Gene and COX2	497
5. Introduction of Mutations in the Cytochrome <i>b</i> Gene and Amplifying and Sequencing the Mutated Cytochrome <i>b</i> Genes	498
6. Creation of Yeast Cytochrome <i>b</i> Mutant Strains by Biolistic Transformation of Yeast Strain DFS160 ρ^0 with Plasmids Containing Mutated Versions of the Cytochrome <i>b</i> Gene	498
7. Cotransduction between Recipient Strain YTE31 and MR6, A Derivative of W303-1B	502
8. Creating Recipient Strains FG20 and FG21, Derivatives of W303-1B that Contain the YTE31 Mitochondria	503
References	505

28. Use of Ruthenium Photoreduction Techniques to Study Electron Transfer in Cytochrome Oxidase	507
Lois Geren, Bill Durham, and Francis Millett	
1. Introduction	508
2. Preparation of Ruthenium-Labeled Cytochrome c Derivatives	509
3. Measurement of Intraprotein Electron Transfer in Horse Ru-39-Cc	511
4. Measurement of Electron Transfer from Ru _D -39-Cc to Cytochrome c Oxidase	513
5. Measurement of Electron Transfer and Oxygen Reduction in Cytochrome c Oxidase with Electrostatically Bound Ruthenium Complexes	515
Acknowledgments	519
References	519
