Introduction	xxxvii
1 Transgenic, cisgenic and novel plant products: Challenges in regulation and safety assessment	1
<i>Palmiro Poltronieri and Ida Barbara Reca</i>	
1.1 Genetically modified plant products in the United States	1
1.2 GMP products in Europe	2
References	14
2 What turns on and off the cytokinin metabolisms and beyond	17
<i>Eva Jiskrová, Ivona Kubalová and Yoshihisa Ikeda</i>	
Acronyms	17
2.1 Introduction	17
2.2 Regulation of cytokinin biosynthesis	18
2.3 Application of altered cytokinin metabolisms to improve agricultural traits	28
Acknowledgement	29
References	29
3 Apple allergens genomics and biotechnology: Unravelling the determinants of apple allergenicity	35
<i>Federica Savazzini, Giampaolo Ricci and Stefano Tartarini</i>	
3.1 Introduction: Fruit and apple allergies	35
3.2 Abiotic factors: Influence of environment and cultivation techniques	43
3.3 Biotic factors: Pathogen infection and allergens content	44
3.4 Post-harvest, food processing and breeding strategies towards allergenic content decrease	46
3.5 Conclusion	48
References	49
4 Non-food interventions: Exploring plant biotechnology applications to therapeutic protein production	55
<i>Matteo Busconi, Mariangela Marudelli and Corrado Fogher</i>	
4.1 Introduction	55

4.2	Plant as heterologous expression system for molecular farming	56
4.3	Stable transformation	57
4.4	Transient transformation	59
4.5	Limits on the use of plants as expression systems for molecular farming	60
4.6	Plant-made recombinant pharmaceuticals	61
4.7	Regulatory aspects and clinical status of PMPs	66
	References	67
5	In planta produced virus-like particles as candidate vaccines	73
	<i>Slavica Matic and Emanuela Noris</i>	
5.1	Introduction	73
5.2	Papillomaviruses	74
5.3	Hepatitis B virus	77
5.4	Human immunodeficiency virus-1	79
5.5	Influenza A virus	81
	References	82
6	Biotechnology of Euphorbiaceae (<i>Jatropha curcas</i>, <i>Manihot esculenta</i>, <i>Ricinus communis</i>)	87
	<i>Fatemeh Maghuly, Johann Vollmann and Margit Laimer</i>	
6.1	Euphorbiaceae crops	87
6.2	Genetic diversity	89
6.3	Genetic improvement	93
6.4	Phytosanitary improvement	98
6.5	Concluding remarks	105
	Acknowledgement	105
	References	106
7	Regulation framework for flowering	115
	<i>Tiziana Sgamma and Stephen Jackson</i>	
7.1	Introduction	115
7.2	Getting ready to flower: the juvenile to adult transition	116
7.3	Framework controlling flowering	117
7.4	Flowering sensing the environment	117
7.5	Endogenous cues regulating flowering	124
7.6	Flowering time control and manipulation	127
	References	128
8	Epigenetic regulation during fleshy fruit development and ripening	133
	<i>Emeline Teyssier, Lisa Boureaux, Weiwei Chen, Ruie Lui, Charlotte Degraeve-Guibault, Linda Stammitti, Yiguo Hong and Philippe Gallusci</i>	
8.1	Introduction	133
8.2	An overview of DNA methylation in plants	134
8.3	Histone marks are likely to play fundamental role in fruit development	142
8.4	Concluding remarks	145
	References	146

9	Tomato fruit quality improvement facing the functional genomics revolution	153
	<i>Dominique Rolin, Emeline Teyssier, Yiguo Hong and Philippe Gallusci</i>	
9.1	Introduction	153
9.2	What is meant by fruit quality?	154
9.3	Genomics-assisted breeding for improving fruit quality	155
9.4	Future potential of tomato breeding using omics approaches	157
9.5	Fruit modelling to establish fleshy fruit traits of interest	160
9.6	Concluding remarks	161
	References	162
10	Rice genomics and biotechnology	167
	<i>Dawei Xue, Hua Jiang and Qian Qian</i>	
10.1	Golden age of genomics, biological engineering and paddy rice	167
10.2	Research on the important agronomic traits in rice biology	169
10.3	Emergence of new technologies will extend the golden age of paddy rice	172
10.4	Rice requires further research development to remain a monocotyledon model plant	173
	References	174
11	Genome-wide DNA methylation in tomato	179
	<i>Rupert Fray and Silin Zhong</i>	
11.1	Introduction	179
11.2	Methods to detect and quantify DNA methylation	179
11.3	Distribution of 5-methylcytosine in tomato genome	182
11.4	Genome-wide DNA methylation reprogramming during fruit ripening	186
11.5	Conclusion	190
	Acknowledgements	191
	References	191
12	Recent application of biotechniques for the improvement of mango research	195
	<i>Mohammad Sorof Uddin and Qi Cheng</i>	
12.1	Introduction	195
12.2	Origin and distribution	196
12.3	Economic importance	197
12.4	Cytology	197
12.5	Molecular biotechniques applied on mango	198
12.6	Application of RAA method on mango	204
12.7	Problems in mango improvement using biotechnology	205
12.8	Conclusion and direction of future research	206
	References	207
13	Cotton genomics and biotechnology	213
	<i>Hao Juan and Sun Yuqiang</i>	
13.1	Introduction	213
13.2	Cotton genomics	214

13.3	Cotton fibre function genomics	216
13.4	Cotton biotechnology	222
	List of abbreviations	223
	References	224
14	Virus technology for functional genomics in plants	229
	<i>Cheng Qin, Qi Zhang, Meiling He, Junhua Kong, Bin Li, Atef Mohamed, Weiwei Chen, Pengcheng Zhang, Xian Zhang, Zhiming Yu, Tongfei Lai, Nongnong Shi, Toba Osman and Yiguo Hong</i>	
	Acronyms	229
14.1	Introduction	229
14.2	VRMA – virus-based RNA mobility assay	234
14.3	Conclusion	234
	References	235
15	PARP proteins, NAD, epigenetics, antioxidative response to abiotic stress	237
	<i>Palmiro Poltronieri and Masanao Miwa</i>	
15.1	Introduction	237
15.2	Conclusion	247
	Acknowledgement	247
	References	247
16	Applied oilseed rape marker technology and genomics	253
	<i>Christian Obermeier and Wolfgang Friedt</i>	
16.1	Global importance of oilseed rape	253
16.2	Rapeseed yield and quality and potential improvements	256
16.3	Future potentials of OSR variety and crop improvement	258
16.4	Conclusion	285
	References	285
	Index	297
