Preface

List of Abbreviations

PART 1

Introducing Lipids and their Analysis

1. Lipids: their structures and occurrence	3
A. Introduction	3
B. Definitions	4
C. Fatty acids	5
1. Saturated fatty acids	
2. Monoenoic fatty acids	
3. Polyunsaturated fatty acids	
4. Branched-chain fatty acids	
5. Oxygenated and cyclic fatty acids	
D. Principal simple lipids and complex glycerolipids of animal and plant tissues	11
1. Triacylglycerols and related compounds	
2. Other simple lipids	
3. Glycerophospholipids	
4. Glyceroglycolipids	
5. Ether lipids	
E. Sphingolipids	16
1. Long-chain bases	
2. Ceramides	
3. Sphingomyelin and other sphingophospholipids	
4. Neutral glycosylceramides	
5. Gangliosides	
 2. Chromatographic analysis of lipids: general principles	 21
A. A statement of the problem	21
B. The theory of chromatography	21
C. Modes of separation in chromatography	23
1. Introduction	

2.	Adsorption and normal-phase liquid-partition chromatography	
3.	Gas-liquid partition chromatography	
4.	Reversed-phase liquid partition chromatography	
5.	Ion-exchange chromatography	
6.	Silver ion chromatography	
7.	Size-exclusion chromatography	
8.	Chiral-phase chromatography	29
D.	Gas chromatography	
1.	The column and stationary phase	
2.	Injection systems	
3.	Detectors for gas chromatography	
4.	High-temperature gas chromatography	
5.	Quantitative Analysis	34
E.	High-performance liquid chromatography	
1.	Detectors for high-performance liquid chromatography (HPLC)	
2.	Injection systems	
3.	Solvent pumping systems	
4.	Columns and fittings	
5.	Mobile phases and solvent selectivity	
6.	Some practical aspects	47
F.	Thin-layer chromatography	
1.	Procedures	
2.	Quantification	
3.	The Iatroscan TM analyser	50
G.	Supercritical fluid chromatography	51
H.	Mass spectrometry	
1.	Gas chromatography-mass spectrometry (GC-MS)	
2.	Liquid chromatography-mass spectrometry (LC-MS)	52
I.	Quality control	
3.	Lipid extraction, storage and sample handling	55
A.	Introduction	55
B.	Some practical considerations	55
1.	Storage of tissues and preliminary treatments prior to extraction	
2.	Minimizing autoxidation	
3.	Storage of lipid extracts	
4.	Contaminants and artefacts in extraction procedures	
5.	Hazards	60
C.	The principles of solvent extraction procedures	63
D.	Recommended procedures	

1. Method of Folch, Lees and Stanley
2. Method of Bligh and Dyer
3. Extraction of plant tissues
4. Extraction methods for lipidomic analysis
5. Special cases

PART 2

Chromatographic Separation and Analysis of Individual Lipid Classes

4. Analysis of simple lipid classes	69
A. Preliminary fractionation of lipid extracts	69
B. Low-pressure column chromatography	70
C. Thin-layer chromatography	71
D. High-performance liquid chromatography	73
E. Determination of lipid profiles by gas chromatography	76
F. Analysis of specific simple lipid classes	78
1. Cholesterol and plant sterols	
2. Free (unesterified) fatty acids	
3. Diacylglycerols	
4. Alkyldiacylglycerols and neutral plasmalogens	
5. Wax esters and other wax components	
6. Fatty alcohols	
G. Oxidized fats and oils	87
1. Determination of degree of oxidation	
2. Chromatographic analysis of oxidized triacylglycerols	
5. Chromatographic analysis of phospholipids and glycosyldiacylglycerols	91
A. Introduction	91
B. Separation by low-pressure column chromatography	92
1. Preparative-scale ion-exchange chromatography	
2. Solid-phase extraction chromatography	
C. Thin-layer chromatography	94
1. Introduction	
2. One-dimensional thin-layer chromatography systems	
3. Two-dimensional thin-layer chromatography systems	
4. Location and identification of complex lipids on TLC plates	
5. Quantification	
D. High-performance liquid chromatography	103

1. General comments	
2. Elution procedures with UV detection	
3. Elution procedures with evaporative light-scattering detection	
4. Preparative-scale separations of phospholipids	
E. Quantification of complex lipids separated by chromatography	117
1. Gas chromatographic analysis of the fatty acid constituents with an internal standard	
2. Phosphorus determination	
F. Phosphorus nuclear magnetic resonance spectroscopy	118
G. Some specific problems in the analysis of complex glycerolipids	119
1. Alkyl- and alkenyl-ether forms (and derived aldehydes)	
2. Platelet-activating factor	
3. Phosphatidylinositol and polyphosphoinositides	
4. Sphingomyelin	
6. Chromatographic analysis of sphingolipids	125
A. Introduction	125
B. Preparation of sphingolipid-rich extracts	125
C. Separation of neutral glycosphingolipid classes	127
1. Low-pressure column chromatography	
2. Thin-layer chromatography	
3. High-performance liquid chromatography	
D. Separation of gangliosides	133
1. Extraction	
2. Thin-layer chromatography	
3. High-performance liquid chromatography	
E. Analysis of hydrolysis products of glycosphingolipids	136
1. Long-chain bases	
2. Fatty acids of sphingolipids	
3. Carbohydrate and sialic acid moieties	
F. Some miscellaneous glycolipids	141
1. Glycolipid sulfates	
2. Sphingosine 1-phosphate	

PART 3

Analysis of Fatty Acids

7. Preparation of derivatives of fatty acids	145
A. Introduction	145
B. Hydrolysis (saponification) of lipids	145

C. Preparation of methyl and other esters of fatty acids	146
1. Acid-catalysed esterification and transesterification	
2. Base-catalysed transesterification	
3. Diazomethane	
4. Phenacyl and related esters	
5. Special cases	
6. Clean-up of methyl esters	
D. Preparation of derivatives for mass spectrometry	152
1. Pyrrolidides	
2. Picolinyl esters	
3. 4,4-Dimethyloxazoline (DMOX) derivatives	
E. Derivatives of double bonds	154
1. Dimethyl disulphide addition	
2. Hydrogenation	
3. Deuteration	
F. Derivatives of hydroxyl groups	156
1. Acetylation and benzylation	
2. Trimethylsilyl ethers and related derivatives	
3. Nicotines	
 8. Gas chromatographic analysis of fatty acid derivatives	 159
A. Introduction	159
B. Columns and liquid phases	159
C. Provisional identification using standards or retention time relationships	161
D. Separation of the common fatty acids of plants and animals	165
E. Positional and geometric isomers of unsaturated fatty acids	167
1. <i>Cis</i> - and <i>trans</i> -mono- and dienoic fatty acids	
2. Polyenoic fatty acids	
F. Some applications to less common fatty acids	175
1. Short-chain fatty acids	
2. Fatty acids of longer than usual chain length	
3. Branched-chain fatty acids	
4. Oxygenated fatty acids	
5. Other fatty acids	
G. Quantitative estimation of fatty acid compositions	178
 9. Isolation of fatty acids and identification by spectroscopic and related techniques	 181
A. Introduction	181
B. Simple concentration techniques	181

1. Urea adduct formation	
2. Partition in the form of metal ion complexes	
3. Solid-phase extraction methods	
C. Silver ion chromatography	183
1. Thin-layer chromatography	
2. High-performance liquid chromatography	
3. Solid-phase extraction and related column procedures	
D. Reversed-phase high-performance liquid chromatography	189
1. Introduction	
2. Free fatty acids and methyl esters	
3. Derivatives suitable for UV and fluorescence detection	
4. Derivatives suitable for mass spectrometry	
E. Adsorption chromatography	194
F. Identification of fatty acids by chemical degradative procedures	194
1. Chain-length determination	
2. Location of double bonds in fatty acid chains	
3. Detection and location of other functional groups in fatty acids	
G. Spectroscopy of fatty acids	197
1. Infrared spectroscopy	
2. Ultraviolet spectroscopy	
3. Nuclear magnetic resonance spectroscopy	
H. Mass spectrometry	202
1. Introduction	
2. Saturated straight-chain fatty acids	
3. Monoenoic fatty acids	
4. Di- and polyenoic fatty acids	
5. Branched-chain and cyclic fatty acids	
6. Oxygenated fatty acids	

PART 4

Chromatographic Analysis of Molecular Species of Lipids

10. Molecular species of triacylglycerols, diacylglycerols derived from complex lipids, and related lipids	215
A. The nature of the problem	215
B. Separation of triacylglycerol species	216
1. Introduction and general approach	
2. Adsorption chromatography	
3. Silver ion thin-layer chromatography	
4. Silver ion high-performance liquid chromatography	
5. Reversed-phase high-performance liquid chromatography	

6. High-temperature gas chromatography	
7. Supercritical fluid chromatography	
8. Oxidized triacylglycerols	
C. Molecular species of mono- and diacylglycerols	232
1. Introduction	
2. Generation of diacylglycerols and equivalent ether lipids from complex lipids	
3. High-temperature gas chromatography	
4. Silver ion chromatography	
5. Reversed-phase high-performance liquid chromatography	
6. Mass spectrometry	
D. Other simple lipids	243
11. Chromatographic analysis of molecular species of intact phospholipids and glycolipids	245
A. Introduction	245
B. High-performance liquid chromatography separation of intact phospholipids	246
1. Phosphatidylcholine and related lipids	
2. Phosphatidylethanolamine and other common phosphoglycerides	
3. Sphingomyelin	
4. Oxidized phospholipids	
C. Glycoglycerolipids	251
1. Reversed-phase high-performance liquid chromatography	
2. Mass spectrometry	
D. Glycosphingolipids	253
1. Ceramides (including those derived from complex sphingolipids)	
2. Glycosphingolipids in underivatized form	
3. Glycosphingolipids in derivatized form	
12. Positional distributions of fatty acids in glycerolipids	261
A. Introduction	261
B. Positional distribution of fatty acids in triacyl- <i>sn</i> -glycerols	261
1. Pancreatic lipase hydrolysis	
2. Lipase of <i>Rhizopus arrhizus</i>	
3. Chemical methods	
4. Nuclear magnetic resonance (NMR) spectroscopy	
5. Stereospecific analysis	
C. Enzymatic hydrolysis of complex lipids	271
1. Phospholipase A ₂ hydrolysis of phospholipids	
2. Glycosyldiacylglycerols	

PART 5

Mass Spectrometric Analysis of Lipids in Lipidomics

13. Introduction to mass spectrometric analysis of lipids in lipidomics	277
A. Lipidomics	277
B. Brief history of mass spectrometry for lipid analysis	279
1. Electron-impact and chemical ionization	
2. Atmospheric pressure chemical ionization (APCI)	
3. Fast-atom bombardment (FAB)	
4. Thermospray ionization, field ionization, field desorption, plasma desorption, and laser desorption	
C. Modern developments in mass spectrometry for lipid analysis	284
1. Matrix-assisted laser desorption/ionization (MALDI)	
2. Atmospheric pressure photoionization	
3. Electrospray ionization (ESI)	
D. Tandem mass spectrometry modes useful for lipid analyses in lipidomics	296
1. Product-ion scan	
2. Precursor-ion scan	
3. Neutral loss scan	
4. Selected reaction monitoring	
E. Impact of recent developments related to mass spectrometric analyses of lipids in lipidomics	299
1. Microfluidics for automated sample introduction into mass spectrometers for lipidomics	
2. Off-axis ion inlets for atmospheric pressure ionization	
3. Ion mobility mass spectrometry	
4. Time-of-flight secondary ion mass spectrometry	
5. Desorption electrospray ionization	
 14. Characterization of lipids by electrospray ionization mass spectrometry	 305
A. Introduction	305
B. Characterization of individual classes of phospholipids	307
1. Phosphatidylcholines and related lipids	
2. Phosphatidylethanolamines and related lipids	
3. Anionic glycerophospholipids	
4. Cardiolipin	
C. Characterization of individual classes of sphingolipids	322
1. Sphingomyelin	

2. Sulfatide	
3. Cerebroside and psychosine	
4. Inositol phosphoceramide	
5. Ceramide	
6. Sphingoid bases and sphingoid base-1-phosphates	
7. Oligoglycosylceramides and gangliosides	
D. Characterization of simple glycerolipids and glycosyldiacylglycerols	334
1. Triacylglycerols	
2. Di- and monoacylglycerols	
3. Glycoglycerolipids	
15. Practical identification of individual lipid species in lipid extracts of biological samples	339
A. Introduction	339
1. Instrument selection	
2. Sample size and sampling	
3. Lipid extraction for identification and quantification	
4. Sample inlets	
5. Instrument settings	
B. LC-MS based identification of individual molecular species of lipid classes	345
C. Identification of individual molecular species of lipid classes by shotgun lipidomics	349
1. Introduction	
2. Multi-dimensional mass spectrometry	
3. Identification of individual species of selected lipids using multi-dimensional MS-based shotgun lipidomics	
4. Profiling individual species of lipids using a specific tandem mass spectrometric analysis	
5. Identification of the altered lipid species of a cellular lipidome through differential lipid profiling	
D. Location of double bonds in individual lipid species	363
16. Quantification of lipid molecular species by electrospray ionization mass spectrometry	365
A. Introduction	365
B. Internal standards and normalization	366
C. Quantification of lipids by HPLC-coupled ESI-MS and ESI-MS/MS	369
1. Quantification of lipid species by HPLC-coupled ESI-MS	
2. Quantification of lipid species by HPLC-coupled ESI-MS/MS (i.e. SRM/MRM)	

D. Quantification of lipids after direct infusion	374
1. Quantification of individual lipid species of a class by scanning a characteristic fragment diagnostic of the class	
2. Quantification of individual lipid species by multiple or data-dependent tandem mass spectrometry	
3. Quantification of individual lipid species by multi-dimensional MS-based shotgun lipidomics	
E. Concerns associated with quantification	381
1. Quantitative analysis in the unaggregated state at which molecular species of a polar lipid class have essentially identical ionization efficiencies	
2. Ion suppression	
3. Dynamic range	
4. The impact of ^{13}C isotopologues on quantification of individual lipid species	
5. The effects of baseline noise on quantification of low-abundant lipid species	
6. Data processing and bioinformatics	
F. Conclusions	392
References	393
