1. NUCLEIC ACID BLOTting AND HYBRIDIZATION	1
Membranes for nucleic acid blotting	1
Structures of the active groups of DBM and DPT papers (Figure 1)	1
Properties of materials used for immobilization of nucleic acids (Table 1)	2
Recommended uses for different types of membrane (Table 2)	4
Factors influencing hybridization	4
Factors influencing the T_m of nucleic acid hybrids (Table 3)	5
Equations for calculation of T_m (Table 4)	5
Factors influencing the hybridization rate for nucleic acids in solution (Table 5)	5
Synthetic oligonucleotide probes	6
Data for the calculation of oligonucleotide concentration (Table 6)	6
Melting temperatures for oligonucleotides of different lengths and base compositions (Table 7)	8
Number of codons for each amino acid (Table 8)	10
Reagents and conditions for nucleic acid hybridization	10
High salt solutions used in hybridization analysis (Table 9)	11
Blocking agents used in hybridization analysis (Table 10)	12
Recommended uses for blocking agents (Table 11)	12
Typical formulations for hybridization solutions (Table 12)	13
Typical hybridization temperatures for different applications (Table 13)	14
Typical wash conditions (Table 14)	14
Troubleshooting guide for nucleic acid blotting and hybridization (Table 15)	15
References	19
2. DNA SEQUENCING	21
Chain termination DNA sequencing	21
The M13mp series of vectors (Table 1)	22
Commonly used phagemids (Table 2)	23
Sequencing primers for M13mp vectors and phagemids carrying the <i>lacZ'</i> gene (Figure 1)	27
Sequencing primers for λ gt10 and λ gt11 (Figure 2)	28
Sequencing primers for pBR322 (Figure 3)	29
Properties of DNA polymerases used for sequencing (Table 3)	31
Nucleotides used in DNA sequencing: physical and chemical data (Table 4)	32
Changing the variables in a labelling termination experiment (Table 5)	36
Chemical degradation DNA sequencing	36
Methods for preparing end-labelled DNA for chemical degradation sequencing (Table 6)	37
Cloning vectors for asymmetric labelling of dsDNA (Table 7)	37

Nucleotide modification reactions used in chemical degradation sequencing (Table 8)	38
Reagents used in chemical degradation sequencing: physical and chemical data (Table 9)	39
Denaturing polyacrylamide gel electrophoresis	39
The chemistry of acrylamide polymerization (Figure 4)	40
Reagents used in denaturing polyacrylamide gels (Table 10)	41
Approximate range of resolution of denaturing polyacrylamide gels of different concentrations (Table 11)	41
Recipes for preparing 60 ml volumes of denaturing polyacrylamide gels of different concentrations (Table 12)	42
Loading buffers for denaturing polyacrylamide gel electrophoresis (Table 13)	42
Approximate migration rates for bromophenol blue and xylene cyanol in denaturing polyacrylamide gels of different concentrations (Table 14)	42
Troubleshooting	43
Troubleshooting guide for DNA sequencing (Table 15)	43
Common polymerase artefacts seen on chain termination sequencing gels (Table 16)	48
DNA databases and software for sequence analysis	48
Major nucleic acid and protein sequence databases (Table 17)	48
Databases containing DNA sequences and other relevant information for single, or groups of related, organisms (Table 18)	49
References	52
 3. POLYMERASE CHAIN REACTION	 55
Amplification methodology	55
The first three cycles of a PCR (Figure 1)	56
A typical temperature profile for a PCR (Figure 2)	56
Numbers of molecules synthesized per double-stranded template in a PCR (Table 1)	57
Amount of DNA synthesized per double-stranded template in a PCR (Table 2)	57
Properties of thermostable DNA polymerases (Table 3)	58
Frequencies of primer annealing sites (Table 4)	60
Numbers of annealing sites for primers of different lengths in template DNAs of different lengths (Table 5)	61
Amounts of double-stranded DNA of different lengths corresponding to 3×10^5 molecules (Table 6)	62
Cloning PCR products	65
Examples of vectors that carry single T nucleotides as 3' overhangs (Table 7)	65
Ability of restriction endonucleases to cut close to the ends of double-stranded DNA molecules (Table 8)	66
Sequencing PCR products	69
Troubleshooting	69
Troubleshooting guide for PCR (Table 9)	69
References	70
 4. LABELLING NUCLEIC ACIDS	 73
Radiochemistry	73
Glossary of terms relevant to radiochemistry (Table 1)	73
Conversion between becquerels and curies (Table 2)	74
Radionuclides used in nucleic acid labelling (Table 3)	74
Decay table for ^{32}P (Table 4)	75
Decay table for ^{33}P (Table 5)	75
Decay table for ^{35}S (Table 6)	76

Labelling procedures	77
Positions at which nucleotides are labelled (Figure 1)	77
Techniques for attaching radioactive labels to nucleic acids (Table 7)	78
Typical specific activities obtained by commonly used nucleic acid labelling techniques (Table 8)	79
Detection of radioactivity	80
Scintillation fluors: physical and chemical data (Table 9)	80
Solvents for scintillation counting: physical and chemical data (Table 10)	80
Data relevant to Cerenkov counting (Table 11)	81
Suitable films for different detection methods (Table 12)	82
Sensitivities of different detection methods (Table 13)	82
Appropriate detection methods for different applications (Table 14)	82
Troubleshooting guide for autoradiography and fluorography (Table 15)	82
Protection from radiochemical hazards	83
Ten golden rules for working with radiochemicals (Table 16)	84
Shielding required to attenuate β -particles of different energies (Table 17)	85
Non-radioactive labelling	85
Summary of non-radioactive labelling strategies (Table 18)	86
References	86
5. AGAROSE GEL ELECTROPHORESIS	89
Agarose gels	89
The agarobiose repeating unit of agarose polymers (Figure 1)	89
Range of separation of linear DNA in agarose gels (Table 1)	90
Separation of small DNA markers in NuSieve 3:1 agarose gels (Figure 2)	91
Separation of small DNA markers in NuSieve GTG agarose gels (Figure 3)	92
Separation of DNA markers in SeaPlaque GTG agarose gels (Figure 4)	93
Separation of DNA markers in SeaKem GTG agarose gels (Figure 5)	94
Separation of DNA markers in SeaKem Gold agarose gels (Figure 6)	95
Effect of agarose concentration on gelling and melting temperatures of different agaroses (Figure 7)	96
Effect of concentration on gel strength for agaroses and bacteriological grade agar (Figure 8)	96
Electrophoresis systems	97
Running buffers for non-denaturing agarose gel electrophoresis (Table 2)	98
Loading buffers for non-denaturing agarose gel electrophoresis (Table 3)	98
Physical and chemical data for dyes used in loading buffers (Table 4)	98
Migration rates for bromophenol blue and xylene cyanol in agaroses of different concentrations (Table 5)	99
Methodology for denaturing agarose gel electrophoresis (Table 6)	100
Physical and chemical data for stains used to visualize nucleic acids after agarose gel electrophoresis (Table 7)	101
Troubleshooting guide for agarose gel electrophoresis (Table 8)	102
DNA and RNA markers for agarose gels	103
Commonly used DNA markers for agarose gels (Table 9)	104
Restriction digests producing at least five bands in the 100–500 bp range (Table 10)	106
Restriction digests producing at least five bands in the 500–1000 bp range (Table 11)	115
Restriction digests producing at least five bands in the 1000–5000 bp range (Table 12)	118
Restriction digests producing at least five bands >5000 bp (Table 13)	122
Additional restriction digests useful as DNA markers (Table 14)	123
Examples of commercially available RNA markers (Table 15)	131
References	131

6. CENTRIFUGATION	133
Calculation of the relative centrifugal force	133
RCFs for different combinations of rotor speed and radial distance (Table 1)	134
Nomogram for approximate calculations of RCF values (Figure 1)	136
Density gradient centrifugation	137
Density gradient media (Table 2)	137
Concentrations of caesium chloride required for different solution densities (Table 3)	137
Concentrations of sucrose required for different solution densities (Table 4)	139
Care of rotors	140
Chemical resistances of rotor components (Table 5)	140
References	141
 7. CHEMICALS AND REAGENTS	 143
Chemicals and reagents described in this chapter (Table 1)	143
Structures of nucleotide bases, nucleosides and nucleotides (Figure 1)	147
Structures of L-amino acids (Figure 2)	149
Details of individual compounds	150
ACES	150
Acetic acid	150
Acetone	150
Acridine orange	151
Acrylamide	151
Actinomycin D	151
ADA	152
Adenine	152
Adenosine	152
S-Adenosylmethionine (SAM)	152
ADP	153
Alanine	153
α -Amanitin	153
Ammonium acetate	153
Ammonium chloride	154
Ammonium hydroxide	154
Ammonium nitrate	154
Ammonium persulfate (AMPS)	154
Ammonium sulfate	154
AMP	154
Ampicillin	155
Anisole	155
Anthracene	155
Arginine	155
Asparagine	155
Aspartic acid	156
ATP	156
Avidin	156
BBOT	156
BCIP	157
BES	157
Bicine	157
Bisbenzimidide H33258	157

Bisbenzimidide H33342	158
Bis-MSB	158
Bleomycin	159
Boric acid	159
Bovine serum albumin (BSA)	159
Brij series	160
Bromocresol green	160
Bromophenol blue	160
5-Bromouracil	160
<i>n</i> -Butanol	161
Butyl-PBD	161
Caesium chloride	161
Caesium trifluoroacetate	161
Calcium chloride	162
Calcium hypochlorite	162
cAMP	162
CAPS	162
Carbenicillin	162
CDP	163
Cefotaxime	163
CHAPS	163
CHAPSO	164
CHES	164
Chloramphenicol	164
Chloroform	165
Citric acid	165
CMP	165
Coenzyme A	165
Colchicine	166
Coomassie Blue	166
Cordycepin	166
Cordycepin 5'-triphosphate	167
CPB	167
CTAB	167
CTP	167
Cycloheximide	168
Cysteine	168
Cytidine	168
Cytosine	168
dADP	168
dAMP	169
DAPI	169
dATP	169
dCDP	169
dCMP	169
dCTP	170
ddATP	170
ddCTP	170
ddGTP	170
ddTTP	171
7-Deaza-dGTP	171

7-Deaza-dITP	171
2'-Deoxyadenosine	171
2'-Deoxycytidine	171
2'-Deoxyguanosine	171
2'-Deoxythymidine	172
Dextran sulfate	172
dGDP	172
dGMP	172
dGTP	172
Diethyl pyrocarbonate	173
1,3-Dimethoxybenzene	173
1,2-Dimethoxyethane	173
<i>N,N</i> -Dimethylformamide (DMF)	173
Dimethyl sulfate (DMS)	173
Dimethyl sulfoxide (DMSO)	174
1,4-Dioxan	174
Dipotassium hydrogen phosphate	174
Disodium hydrogen phosphate	174
Dithioerythritol (DTE)	175
Dithiothreitol (DTT)	175
dITP	175
DMPOPOP	175
dTDP	175
dTMP	175
dTTP	176
dUTP	176
EDTA	176
EGTA	177
Ethanol	177
Ethidium bromide	178
Ficoll 400	178
5-Fluorouracil	178
Formaldehyde	178
Formamide	178
Formic acid	179
GDP	179
Glutamic acid	179
Glutamine	179
Glycerol	180
Glycine	180
Glycylglycine	180
Glyoxal	180
GMP	180
GTP	181
Guanidine hydrochloride	181
Guanidine thiocyanate	181
Guanine	181
Guanosine	181
HEPES	182
HEPPS (EPPS)	182
Histidine	182

Hydrazine	182
Hydrochloric acid	183
5-Hydroxymethylcytosine	183
5-Hydroxymethyl-2'-deoxycytidine	183
Hygromycin B	183
Hypoxanthine	183
Imidazole	184
Indole-3-acetic acid (IAA)	184
Inosine	184
IPTG	184
Isoamyl alcohol	184
Isoleucine	185
Isopropanol	185
ITP	185
Kanamycin	186
Leucine	186
Lithium chloride	186
Lysine	187
Magnesium acetate, tetrahydrate	187
Magnesium chloride, hexahydrate	187
Magnesium nitrate, hexahydrate	187
Magnesium sulfate, heptahydrate	187
Manganous chloride	187
Manganous sulfate	188
β -Mercaptoethanol	188
MES	188
Methanol	188
Methionine	188
Methotrexate	189
2-Methoxyethanol	189
5-Methylcytidine	189
5-Methylcytosine	189
5-Methyl-2'-deoxycytidine	189
<i>N,N</i> -Methylenebisacrylamide	190
7-Methylguanine	190
7-Methylguanosine	190
4-Methylumbelliferyl- α -D-galactopyranoside	190
Mitomycin C	190
MOPS	191
MUG	191
4-MUP	191
NAD	192
NADH	192
NADP	193
NADPH	193
Nalidixic acid	194
Naphthalene	194
Neomycin B	194
Nitric acid	195
Nitroblue tetrazolium	195
Nonidet P40	195

Octyl- β -D-glucopyranoside	196
ONPG	196
Orotic acid	196
Orotidine	197
Orthophosphoric acid	197
PBD	197
PEG	197
Penicillin G	197
Phenol	198
Phenylalanine	198
Piperidine	198
PIPES	198
Placental RNase inhibitor	199
PNPG	199
PNPGlu	200
PNPP	200
Polymin P	200
Polyvinylpyrrolidone (PVP)	200
POPOP	200
Porcine RNase inhibitor	201
Potassium acetate	201
Potassium chloride	201
Potassium dihydrogen phosphate	201
Potassium hydroxide	201
Potassium iodide	201
Potassium nitrate	202
Potassium permanganate	202
Potassium sodium tartrate, tetrahydrate	202
Potassium sulfate	202
PPO	202
Proflavin	202
Proline	203
2-Propen-1-ol	203
Protein A	203
Pseudouridine	203
