

CONTENTS

PREFACE xvii

SECTION I

THE BASICS OF HEREDITY

1

THE ANSWER IN A NUT SHELL: GENES, PROTEINS, AND THE
MEANING OF LIFE 1

2

MENDEL AND THE CONCEPT OF THE GENE

What Mendel Did 12

3

HOW GENES WORK: THE STORY OF HOW GENES ENCODE PROTEINS, OR "THE CENTRAL DOGMA OF MOLECULAR BIOLOGY"

- Structure of DNA 21
- Replication of DNA 25
- How Genes Encode Proteins 27
- Production of Messenger RNA: Transcription 28
- mRNA Molecules Direct the Synthesis of Specific
Proteins: Translation 30
- How Mutations Alter Sequence of Proteins 32
- Translation Requires an Adapter Molecule Called tRNA 36
- Gene Regulation 37
- Summary 44

4

HOW GENES MOVE: CHROMOSOMES AND THE PHYSICAL BASIS OF THE LAWS OF MENDEL

- The Basic Process of Cell Division is *Mitosis* 46
- Meiosis Made Simple 49
- Gene Pairs Located on Different Chromosomes Segregate
at Random 56
- Recombination and Pairs of Genes That Map on the
Same Chromosome 57
- Meiosis Is Executed Quite Differently in Human Males and
Females 59
- The Chromosome Theory of Heredity 64
- Failed Meiotic Segregation (*Nondisjunction*) as Proof of the
Chromosome Theory of Heredity 69

5

ABSENT ESSENTIALS AND MONKEY WRENCHES: HOW MUTATIONS PRODUCE A PHENOTYPE

- Patterns of Inheritance 73

The Relationship between the Nature of the Mutation and the Resulting Phenotype	80
Summary	88

SECTION II

HOW GENES DETERMINE OUR SEX

6

SEX AND CHROMOSOMES, SEX AND HORMONES, SEX AND . . .

Gonads and Chromosomes	92
Evidence That TDF Determines Gonadal Sex	93
The TDF Gene Causes the Indifferent Gonads to Develop as Testes	95
From the Gonads to Somatic Sex Characteristics	96
Adrenal Hyperplasia and Ambiguous Genitalia	96
How Hormones Work	97
Mutations in the Gene That Encodes the Androgen Receptor	98
X-Linked Spinal Bulbar Atrophy and Another Role of the Tfm Gene	99
A Summary of the Basic Mechanism of Sex Determination	101
Changes in the Number of Sex Chromosomes (or Sex Chromosome Aneuploidy)	102

7

SEX CAUSES PROBLEMS: THE INACTIVATION OF THE SECOND X CHROMOSOME

The X Chromosome: How Unique It Is!	108
X Inactivation	109
Timing, Randomness, and Selection of X Inactivation	110
Mechanisms of X Inactivation	111

- The Inactive X Chromosome Is Reactivated in the
Female Germline 114
Turner Syndrome 115

8

GENDER IDENTIFICATION AND SEXUAL ORIENTATION

- Mechanisms of Gender Identification 120
Genetics of Sexual Orientation 122
Summary 129

SECTION III

WHEN MEIOSIS OF MENDELIAN INHERITANCE FAILS

9

FAILED CHROMOSOME SEGREGATION AND THE ETIOLOGY OF DOWN SYNDROME

- Down Syndrome or Trisomy for Chromosome 21 134
Most Cases of Down Syndrome Are Due to Nondisjunction in
the Mother 139
The Maternal Age Effect 140
Prenatal Diagnosis of Down Syndrome 144
Other Human Trisomies 146
Reprise 146

10

EXTREME MUTATION: TRIPLET REPEAT SYNDROMES

- Huntington Disease 149
Two Other Well-Known Triplet Repeat Expansion Mutations 156
Other Triplet Repeat Disorders and Other Diseases 157
Triple-Repeat Mutations and Fragile Sites 157
Summary 164

11

IMPRINTING OR EPIGENETIC CHANGES IN GENES AND CHROMOSOMES

- Imprinting at the Chromosomal Level 166
- Imprinting at the Level of the Male and Female Pronucleus 168
- Imprinting in Small Genetic Intervals 169
- How Important Is Imprinting? 171
- Imprinting and Human Behavior (Maybe?) 171
- How Does Imprinting Work? 172

SECTION IV

HUMAN GENES

12

INTRODUCTION TO GENE CLONING

- What Is Cloning? 178
- Why Would Anyone Clone Human DNA and What Would They Do with It? 179
- Isolating and Cloning DNA Fragments from Living Organisms 179
- A Molecular Look at Some Simple Viruses 186
- Cloning Fragment A 192
- The Southern Transfer: A Practical "Copy" of a Gel 193
- DNA-DNA Hybridization 193
- Okay, but What about Fragment B? It Was Different in Isolate 3 195
- Cloning the TDF Gene 198

13

DNA POLYMORPHISMS AS GENETIC MARKERS IN HUMANS (AND THE MIRACLE OF PCR)

- RFLPs as a Tool for Genetic Mapping 212
- Microsatellites: A Second Type of DNA Polymorphism 215

- Polymerase Chain Reaction 217
Comparing Microsatellite and RFLPs as
Genetic Markers 222
Forensic DNA Analysis: A Brief Digression 222
Other Identity Crises 226

14

HUMAN GENE MAPPING: A GENERAL APPROACH

- What if the Disease-Causing Mutation Does Not Create a Large and
Easily Identifiable DNA Polymorphism? 231
The Basic Process of Human Gene Hunting 239
Special Techniques in Human Gene Mapping 240
What Does the Newspaper Mean When It Announces That a Gene Has
Been Found? 244

15

CYSTIC FIBROSIS

- Mapping of Cystic Fibrosis Gene 249

16

MAMMOTH GENES: MUSCULAR DYSTROPHY AND NEUROFIBROMATOSIS

- Why Are Some Human Genes So Big? (or,
Remember "Introns?") 255
Does Large Size Affect the Genetic Behavior of
These Genes? 258
Duchenne Muscular Dystrophy 259
Structure and Function of the Muscular Dystrophy Gene 263
Prenatal Diagnosis and Gene Therapy for
Muscular Dystrophy 265
Neurofibromatosis 1: Another Really Big Gene 265

17

GENES AND CANCER

Retinoblastoma and Tumor Suppressor Genes 271

How Can Cells Lose the Normal Rb Gene? 272

Colon Cancer, Skin Cancer, and Mutations in DNA

Repair Genes 276

Summary 280

SECTION V

INTERACTIONS OF GENES AND THE ENVIRONMENT

18

MULTIFACTORIAL INHERITANCE: TOWARD FINDING THE GENES FOR MANIC DEPRESSION AND SCHIZOPHRENIA

Many Traits Are Specified by More Than One Gene 285

Many Traits Reflect the Interaction of the Genotype with the
Environment 287

Some Traits May Require a Threshold Number of
Deleterious Alleles 287

The Rules for Multifactorial Inheritance 290

Some Examples of Complex Human Traits That May (or May Not) Be
Examples of Multifactorial Inheritance 291

19

THE MONOAMINE OXIDASE A GENE AND A GENETIC BASIS FOR CRIMINALITY?

Genetics of Violent Aggression in a Family in Denmark 299

20

GENETICS OF THE HUMAN AIDS-VIRUS

- Acquired Immunodeficiency Syndrome 306
The History of AIDS 307
Viruses 308
Treatment of AIDS 315
Are Some People Genetically Resistant to Infection
by HIV? 315
Bright Lights at the End of the Tunnel 317

SECTION VI

PRENATAL DIAGNOSIS

21

METHODS OF PRENATAL DIAGNOSIS

- Noninvasive Tests 323
More Invasive Tests 329
Analysis of Fetal Cells 332
The Conditional Pregnancy 339

22

POTENTIAL FOR GENE THERAPY

- Targeting a Specific Tissue 342
How Many Cells Need to Be Fixed 344
The Problem of Correcting Big Genes 345
Can You Correct the Problem in Time? 345
Early Attempts at Gene Therapy 347
Should Gene Therapy Be Limited to Somatic Cells? 348
One Last Thought about the Science 352

EPILOGUE: FEARS, FAITH, AND FANTASIES

The American Eugenics Movement	353
Could It Happen Again?	356
Maybe We Can Do a Better Job This Time	358

APPENDIX

Suggested Additional Readings	361
