

CONTENTS

<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xix</i>
<i>Volumes in Series</i>	<i>xxi</i>

1. Correlation Analysis: A Tool for Comparing Relaxation-Type Models to Experimental Data	1
Maurizio Tomaiuolo, Joel Tabak, and Richard Bertram	
1. Introduction	2
2. Scatter Plots and Correlation Analysis	3
3. Example 1: Relaxation Oscillations	4
4. Example 2: Square Wave Bursting	13
5. Example 3: Elliptic Bursting	15
6. Example 4: Using Correlation Analysis on Experimental Data	18
7. Summary	19
Acknowledgment	20
References	20
2. Trait Variability of Cancer Cells Quantified by High-Content Automated Microscopy of Single Cells	23
Vito Quaranta, Darren R. Tyson, Shawn P. Garbett, Brandy Weidow, Mark P. Harris, and Walter Georgescu	
1. Introduction	24
2. Background	25
3. Experimental and Computational Workflow	26
4. Application to Traits Relevant to Cancer Progression	34
5. Conclusions	54
Acknowledgments	54
References	54
3. Matrix Factorization for Recovery of Biological Processes from Microarray Data	59
Andrew V. Kossenkov and Michael F. Ochs	
1. Introduction	59
2. Overview of Methods	63

3. Application to the Rosetta Compendium	68
4. Results of Analyses	70
5. Discussion	74
References	75
4. Modeling and Simulation of the Immune System as a Self-Regulating Network	79
Peter S. Kim, Doron Levy, and Peter P. Lee	
1. Introduction	80
2. Mathematical Modeling of the Immune Network	84
3. Two Examples of Models to Understand T Cell Regulation	92
4. How to Implement Mathematical Models in Computer Simulations	100
5. Concluding Remarks	105
Acknowledgments	106
References	107
5. Entropy Demystified: The "Thermo"-dynamics of Stochastically Fluctuating Systems	111
Hong Qian	
1. Introduction	112
2. Energy	113
3. Entropy and "Thermo"-dynamics of Markov Processes	117
4. A Three-State Two-Cycle Motor Protein	122
5. Phosphorylation-Dephosphorylation Cycle Kinetics	125
6. Summary and Challenges	131
References	132
6. Effect of Kinetics on Sedimentation Velocity Profiles and the Role of Intermediates	135
John J. Correia, P. Holland Alday, Peter Sherwood, and Walter F. Stafford	
1. Introduction	136
2. Methods	138
3. ABCD Systems	141
4. Monomer-Tetramer Model	151
5. Summary	158
Acknowledgments	159
References	159

7. Algebraic Models of Biochemical Networks	163
Reinhard Laubenbacher and Abdul Salam Jarrah	
1. Introduction	164
2. Computational Systems Biology	165
3. Network Inference	176
4. Reverse-Engineering of Discrete Models: An Example	181
5. Discussion	190
References	193
8. High-Throughput Computing in the Sciences	197
Mark Morgan and Andrew Grimshaw	
1. What is an HTC Application?	199
2. HTC Technologies	200
3. High-Throughput Computing Examples	204
4. Advanced Topics	218
5. Summary	226
References	226
9. Large Scale Transcriptome Data Integration Across Multiple Tissues to Decipher Stem Cell Signatures	229
Ghislain Bidaut and Christian J. Stoeckert	
1. Introduction	230
2. Systems and Data Sources	231
3. Data Integration	236
4. Artificial Neural Network Training and Validation	238
5. Future Development and Enhancement Plans	243
Acknowledgments	244
References	244
10. DynaFit—A Software Package for Enzymology	247
Petr Kuzmič	
1. Introduction	248
2. Equilibrium Binding Studies	250
3. Initial Rates of Enzyme Reactions	255
4. Time Course of Enzyme Reactions	260
5. General Methods and Algorithms	262
6. Concluding Remarks	275
Acknowledgments	276
References	276

11. Discrete Dynamic Modeling of Cellular Signaling Networks	281
Réka Albert and Rui-Sheng Wang	
1. Introduction	282
2. Cellular Signaling Networks	284
3. Boolean Dynamic Modeling	286
4. Variants of Boolean Network Models	297
5. Application Examples	301
6. Conclusion and Discussion	303
Acknowledgments	303
References	303
12. The Basic Concepts of Molecular Modeling	307
Akansha Saxena, Diana Wong, Karthikeyan Diraviyam, and David Sept	
1. Introduction	308
2. Homology Modeling	308
3. Molecular Dynamics	317
4. Molecular Docking	324
References	330
13. Deterministic and Stochastic Models of Genetic Regulatory Networks	335
Ilya Shmulevich and John D. Aitchison	
1. Introduction	336
2. Boolean Networks	337
3. Differential Equation Models	343
4. Probabilistic Boolean Networks	347
5. Stochastic Differential Equation Models	351
References	353
14. Bayesian Probability Approach to ADHD Appraisal	357
Raina Robeva and Jennifer Kim Penberthy	
1. Introduction	358
2. Bayesian Probability Algorithm	362
3. The Value of Bayesian Probability Approach as a Meta-Analysis Tool	369
4. Discussion and Future Directions	373
Acknowledgment	377
References	378

15. Simple Stochastic Simulation	381
Maria J. Schilstra and Stephen R. Martin	
1. Introduction	382
2. Understanding Reaction Dynamics	385
3. Graphical Notation	386
4. Reactions	389
5. Reaction Kinetics	389
6. Transition Firing Rules	393
7. Summary	406
8. Notes	407
References	409
16. Monte Carlo Simulation in Establishing Analytical Quality Requirements for Clinical Laboratory Tests: Meeting Clinical Needs	411
James C. Boyd and David E. Bruns	
1. Introduction	412
2. Modeling Approach	414
3. Methods for Simulation Study	416
4. Results	417
5. Discussion	429
References	431
17. Nonlinear Dynamical Analysis and Optimization for Biological/Biomedical Systems	435
Amos Ben-Zvi and Jong Min Lee	
1. Introduction	436
2. Hypothalamic-Pituitary-Adrenal Axis System	437
3. Development of a Clinically Relevant Performance-Assessment Tools	441
4. Dynamic Programming	452
5. Computation of Optimal Treatments for HPA Axis System	455
6. Conclusions	458
Acknowledgments	458
References	458

18. Modeling of Growth Factor-Receptor Systems: From Molecular-Level Protein Interaction Networks to Whole-Body Compartment Models	461
Florence T. H. Wu, Marianne O. Stefanini, Feilim Mac Gabhann, and Aleksander S. Popel	
1. Background	462
2. Molecular-Level Kinetics Models: Simulation of <i>In Vitro</i> Experiments	466
3. Mesoscale Single-Tissue 3D Models: Simulation of <i>In Vivo</i> Tissue Regions	474
4. Single-Tissue Compartmental Models: Simulation of <i>In Vivo</i> Tissue	482
5. Multitissue Compartmental Models: Simulation of Whole Body	485
6. Conclusions	493
Acknowledgments	494
References	494
19. The Least-Squares Analysis of Data from Binding and Enzyme Kinetics Studies: Weights, Bias, and Confidence Intervals in Usual and Unusual Situations	499
Joel Tellinghuisen	
1. Introduction	500
2. Least Squares Review	503
3. Statistics of Reciprocals	506
4. Weights When y is a True Dependent Variable	511
5. Unusual Weighting: When x is the Dependent Variable	521
6. Assessing Data Uncertainty: Variance Function Estimation	524
7. Conclusion	526
References	527
20. Nonparametric Entropy Estimation Using Kernel Densities	531
Douglas E. Lake	
1. Introduction	532
2. Motivating Application: Classifying Cardiac Rhythms	533
3. Renyi Entropy and the Friedman-Tukey Index	535
4. Kernel Density Estimation	536
5. Mean-Integrated Square Error	538
6. Estimating the FT Index	540
7. Connection Between Template Matches and Kernel Densities	544
8. Summary and Future Work	545
Acknowledgments	545
References	546

21. Pancreatic Network Control of Glucagon Secretion and Counterregulation	547
Leon S. Farhy and Anthony L. McCall	
1. Introduction	548
2. Mechanisms of Glucagon Counterregulation (GCR)	
Dysregulation in Diabetes	550
3. Interdisciplinary Approach to Investigating the Defects in the GCR	551
4. Initial Qualitative Analysis of the GCR Control Axis	553
5. Mathematical Models of the GCR Control Mechanisms in STZ-Treated Rats	556
6. Approximation of the Normal Endocrine Pancreas by a Minimal Control Network (MCN) and Analysis of the GCR Abnormalities in the Insulin Deficient Pancreas	560
7. Advantages and Limitations of the Interdisciplinary Approach	571
8. Conclusions	575
Acknowledgment	575
References	575
22. Enzyme Kinetics and Computational Modeling for Systems Biology	583
Pedro Mendes, Hanan Messiha, Naglis Malys, and Stefan Hoops	
1. Introduction	584
2. Computational Modeling and Enzyme Kinetics	586
3. Yeast Triosephosphate Isomerase (EC 5.3.1.1)	588
4. Initial Rate Analysis	590
5. Progress Curve Analysis	594
6. Concluding Remarks	598
Acknowledgments	598
References	598
23. Fitting Enzyme Kinetic Data with KinTek Global Kinetic Explorer	601
Kenneth A. Johnson	
1. Background	602
2. Challenges of Fitting by Simulation	603
3. Methods	605
4. Progress Curve Kinetics	610
5. Fitting Full Progress Curves	613
6. Slow Onset Inhibition Kinetics	620
7. Summary	624
Acknowledgments	625
References	625
