Foreword xi

Preface xv

1. Introduction

- 1.1 Advantages of the Bayesian Approach to Statistics 2
- 1.2 So Why Then Isn't Everyone a Bayesian? 4
- 1.3 WinBUGS 4
- 1.4 Why This Book? 5
- 1.5 What This Book Is Not About: Theory of Bayesian Statistics and Computation 8
- 1.6 Further Reading 9
- 1.7 Summary 11

2. Introduction to the Bayesian Analysis of a Statistical Model

- 2.1 Probability Theory and Statistics 14
- 2.2 Two Views of Statistics: Classical and Bayesian 15
- 2.3 The Importance of Modern Algorithms and Computers for Bayesian Statistics 19
- 2.4 Markov chain Monte Carlo (MCMC) and Gibbs Sampling 19
- 2.5 What Comes after MCMC? 21
- 2.6 Some Shared Challenges in the Bayesian and the Classical Analysis of a Statistical Model 24
- 2.7 Pointer to Special Topics in This Book 27
- 2.8 Summary 27

3. WinBUGS

- 3.1 What Is WinBUGS? 29
- 3.2 Running WinBUGS from R 30
- 3.3 WinBUGS Frees the Modeler in You 30
- 3.4 Some Technicalities and Conventions 31

4. A First Session in WinBUGS: The "Model of the Mean"

- 4.1 Introduction 33
- 4.2 Setting Up the Analysis 34
- 4.3 Starting the MCMC blackbox 40

- 4.4 Summarizing the Results 41
- 4.5 Summary 44

5. Running WinBUGS from R via R2WinBUGS

- 5.1 Introduction 47
- 5.2 Data Generation 48
- 5.3 Analysis Using R 49
- 5.4 Analysis Using WinBUGS 49
- 5.5 Summary 55

6. Key Components of (Generalized) Linear Models: Statistical Distributions and the Linear Predictor

- 6.1 Introduction 58
- 6.2 Stochastic Part of Linear Models: Statistical Distributions 59
- 6.3 Deterministic Part of Linear Models: Linear Predictor and Design Matrices 66
- 6.4 Summary 89

7. t-Test: Equal and Unequal Variances

- 7.1 t-Test with Equal Variances 92
- 7.2 t-Test with Unequal Variances 97
- 7.3 Summary and a Comment on the Modeling of Variances 100

8. Normal Linear Regression

- 8.1 Introduction 103
- 8.2 Data Generation 104
- 8.3 Analysis Using R 105
- 8.4 Analysis Using WinBUGS 105
- 8.5 Summary 113

9. Normal One-Way ANOVA

- 9.1 Introduction: Fixed and Random Effects 115
- 9.2 Fixed-Effects ANOVA 119
- 9.3 Random-Effects ANOVA 122
- 9.4 Summary 127

10. Normal Two-Way ANOVA

- 10.1 Introduction: Main and Interaction Effects 129
- 10.2 Data Generation 131
- 10.3 Aside: Using Simulation to Assess Bias and Precision of an Estimator 133
- 10.4 Analysis Using R 134
- 10.5 Analysis Using WinBUGS 135
- 10.6 Summary 139

11. General Linear Model (ANCOVA)

- 11.1 Introduction 141
- 11.2 Data Generation 143
- 11.3 Analysis Using R 145
- 11.4 Analysis Using WinBUGS (and a Cautionary Tale About the Importance of Covariate Standardization) 145
- 11.5 Summary 149

12. Linear Mixed-Effects Model

- 12.1 Introduction 151
- 12.2 Data Generation 154
- 12.3 Analysis Under a Random-Intercepts Model 156
- 12.4 Analysis Under a Random-Coefficients Model without Correlation between Intercept and Slope 158
- 12.5 The Random-Coefficients Model with Correlation between Intercept and Slope 161
- 12.6 Summary 165

13. Introduction to the Generalized Linear Model: Poisson "t-test"

- 13.1 Introduction 167
- 13.2 An Important but Often Forgotten Issue with Count Data 170
- 13.3 Data Generation 170
- 13.4 Analysis Using R 171
- 13.5 Analysis Using WinBUGS 171
- 13.6 Summary 177

14. Overdispersion, Zero-Inflation, and Offsets in the GLM

- 14.1 Overdispersion 180
- 14.2 Zero-Inflation 184
- 14.3 Offsets 188
- 14.4 Summary 190

15. Poisson ANCOVA

- 15.1 Introduction 193
- 15.2 Data Generation 194
- 15.3 Analysis Using R 196
- 15.4 Analysis Using WinBUGS 197
- 15.5 Summary 201

16. Poisson Mixed-Effects Model (Poisson GLMM)

- 16.1 Introduction 203
- 16.2 Data Generation 205
- 16.3 Analysis Under a Random-Coefficients Model 206
- 16.4 Summary 209

17. Binomial "t-Test"

- 17.1 Introduction 211
- 17.2 Data Generation 213
- 17.3 Analysis Using R 213
- 17.4 Analysis Using WinBUGS 214
- 17.5 Summary 216

18. Binomial Analysis of Covariance

- 18.1 Introduction 219
- 18.2 Data Generation 221
- 18.3 Analysis Using R 223
- 18.4 Analysis Using WinBUGS 224
- 18.5 Summary 228

19. Binomial Mixed-Effects Model (Binomial GLMM)

- 19.1 Introduction 229
- 19.2 Data Generation 230
- 19.3 Analysis Under a Random-Coefficients Model 231
- 19.4 Summary 236

20. Nonstandard GLMMs 1: Site-Occupancy Species Distribution Model

- 20.1 Introduction 237
- 20.2 Data Generation 242
- 20.3 Analysis Using WinBUGS 246
- 20.4 Summary 251

21. Nonstandard GLMMs 2: Binomial Mixture Model to Model Abundance

- 21.1 Introduction 253
- 21.2 Data Generation 257
- 21.3 Analysis Using WinBUGS 262
- 21.4 Summary 273

22. Conclusions

Appendix 279
