## SECTION I EPIGENETIC CHANGES INDUCED BY ENVIRONMENTAL AND DIETARY/LIFESTYLE FACTORS 1

### 1 Induction of Epigenetic Alterations by Dietary and Other Environmental Factors 3

John C. Mathers, Gordon Strathdee, and Caroline L. Relton

- I. Introduction 4
- II. Induction of Epigenetic Alterations by Dietary and Other Environmental Factors 9
- III. Conclusions 27
- References 30

### 2 Induction of Epigenetic Alterations by Chronic Inflammation and Its Significance on Carcinogenesis 41

Tohru Niwa and Toshikazu Ushijima

- I. Introduction 42
- II. Traditional Views on How Inflammation Leads to Cancers 43
- III. Epigenetic Alteration Induced by Inflammation and Its Significance on Carcinogenesis 44
- IV. Mechanisms for Induction of Epigenetic Alterations by Inflammation 49
- V. Conclusions 52
- References 53

### **3 *In Utero* Life and Epigenetic Predisposition for Disease 57**

Kent L. Thornburg, Jackilen Shannon, Philippe Thuillier, and Mitchell S. Turker

- I. Introduction to Programming 58
- II. Programming and Cancer 61
- III. Dynamic Changes in the Epigenome During Mammalian Development 63
- IV. Environmental Perturbation of the Epigenome and the Developmental Origins of Disease 65
- V. Mechanisms Involved in Dietary Modulation of Epigenetic Modification 66
- VI. Maternal Diet and Risk of Cancer in Offspring: Human Studies 69
- VII. The Placenta as a Programming Factor 71
- VIII. Conclusions 69
- References 73

### **4 Folate and One-Carbon Metabolism and Its Impact on Aberrant DNA Methylation in Cancer 79**

Jia (Jenny) Liu and Robyn Lynne Ward

- I. Introduction 80
- II. Chemistry and Metabolism of Folate 81
- III. Biochemistry of Cellular Folate-Mediated One-Carbon Metabolism 84
- IV. Characteristics of DNA Hypomethylation in Cancer 96
- V. Folate Deficiency, DNA Hypomethylation, and CRC: A Critical Review 97
- VI. Conclusion 109
- References 111

## **SECTION II EPIGENETIC BIOMARKERS 123**

### **5 Epigenetic Alterations as Cancer Diagnostic, Prognostic, and Predictive Biomarkers 125**

Dajun Deng, Zhaojun Liu, and Yantao Du

- I. Introduction 126
- II. DNA Methylation 128

|                                  |     |
|----------------------------------|-----|
| III. MicroRNAs                   | 147 |
| IV. Other Epigenetic Alterations | 155 |
| V. Prospective and Challenges    | 156 |
| References                       | 158 |

## **6 Detection of DNA Methylation Changes in Body Fluids 177**

Triantafillos Liloglou and John K. Field

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| I. Introduction                                                            | 178 |
| II. DNA Methylation Detection Techniques and Methodologies                 | 179 |
| III. DNA Methylation Biomarker Discovery and Validation                    | 181 |
| IV. DNA Methylation Detection in Sputum and Bronchial Washings             | 184 |
| V. DNA Methylation Detection in Saliva                                     | 186 |
| VI. DNA Methylation Detection in Blood, Plasma, and Serum                  | 187 |
| VII. DNA Methylation Detection in Urine                                    | 189 |
| VIII. DNA Methylation Detection in Pancreatic, Duodenal, and Gastric Juice | 195 |
| IX. DNA Methylation Detection in Breast Ductal Fluid                       | 196 |
| X. Conclusions                                                             | 196 |
| References                                                                 | 198 |

## **SECTION III APPLICATION OF EPIGENETICS IN MOLECULAR EPIDEMIOLOGY AND EPIGENETIC CANCER PREVENTION 209**

### **7 Epigenetics in Molecular Epidemiology of Cancer: A New Scope 211**

Yasuhito Yuasa

|                                                                           |     |
|---------------------------------------------------------------------------|-----|
| I. Introduction                                                           | 212 |
| II. Factors Affecting Epigenetic Statuses                                 | 213 |
| III. Blood Leukocyte DNA Methylation Statuses in Cancer Cases and Control | 226 |
| IV. Conclusion                                                            | 230 |
| References                                                                | 232 |

|                                                       |            |

| <b>8 Diet, Epigenetic, and Cancer Prevention</b>      | <b>237</b> |
| Jia Chen and Xinran Xu                                |            |
| I. Introduction                                       | 238        |
| II. Dietary Compounds Affecting DNA Methylation       | 239        |
| III. Dietary Compounds Affecting Histone Modification | 244        |
| IV. Dietary Compounds Affecting MicroRNA              | 248        |
| V. Perspectives                                       | 249        |
| References                                            | 250        |

## **SECTION IV EPIGENETIC DATABASES 257**

|                                                                                                      |            |
|------------------------------------------------------------------------------------------------------|------------|
| <b>9 Epigenetic Databases and Computational Methodologies in the Analysis of Epigenetic Datasets</b> | <b>259</b> |
| Maté Ongenaert                                                                                       |            |
| I. Introduction                                                                                      | 260        |
| II. Basic Epigenetic Tools                                                                           | 261        |
| III. Epigenetic Databases                                                                            | 273        |
| IV. Cancer Databases                                                                                 | 280        |
| V. Computational Approaches in Epigenetics                                                           | 282        |
| VI. Applications and Data Analysis in Cancer Epigenetics                                             | 284        |
| VII. Conclusions                                                                                     | 292        |
| References                                                                                           | 293        |
