Preface vii

Acknowledgements xiii

Note on Taxonomy xv

1. Fungal Diversity

NICHOLAS P. MONEY

Evolutionary Origins of the Fungi and Their
Relationships to Other Eukaryotes 1

The Classification of Fungi 2

Fungal Phyla 8

Microsporidia 34

Miscellaneous Microorganisms Studied by
Mycologists 35

Further Reading 36

Weblinks 36

2. Fungal Cell Biology and Development

NICHOLAS P. MONEY

Organelles, Cells, Organs 37

Cell Structure 37

Growth and Cell Division 47

The Mycelium 56

Multicellular Organs 58

Further Reading 66

Weblink 66

3. Spore Production, Discharge, and Dispersal

NICHOLAS P. MONEY

Diversity, Development, and Functions of
Spores 67

Spore Size and Shape 72

Spore Discharge 72

Dispersal of Spores and Aeromycology 89

Dispersal of Spores by Animals 92

Aquatic Spores 94

Further Reading 97

4. Genetics – Variation, Sexuality, and Evolution

LYNNE BODDY

Defining Individuals, Populations, and Species 99

Life Cycles and the Sexual Process 109

Variation, Microevolution, and Speciation 123

Further Reading 137

5. Physiology and Adaptation

SARAH C. WATKINSON

Introduction 141

Nutrient Acquisition, Uptake, and
Assimilation 141

Secondary Metabolism 161

Sensing and Responding to the Environment 166

Developmental Adaptation for Nutrient

Acquisition 175

Geomycology 180

Further Reading and References 184

6. Molecular Ecology

SARAH C. WATKINSON

The Application of DNA Technology in the Ecology
of Fungi 189

Fungal Diversity in the Environment 190

Linking Fungal Diversity and Ecosystem

Processes 196

Whole-Genome Sequencing and Comparative

Genomics 198

Further Reading 202

7. Mutualistic Symbiosis Between Fungi and Autotrophs

SARAH C. WATKINSON

- Mycorrhiza 205
- Lichens 228
- Endophytes 234
- Further Reading 239
- Journal Articles and Reviews 240

8. Pathogens of Autotrophs

LYNNE BODDY

- Spectrum of Interactions of Fungi with Plants 246
- Distribution of Pathogens Amongst Fungal Groups 247
- Susceptibility to and Defence Against Fungal Pathogens 252
- Key Events in the Disease Cycle of Pathogens 257
- Case Studies 265
- Development of Disease in Natural Ecosystems and Crops 282
- Diseases of Other Autotrophs: Lichens and Seaweeds 284
- Emerging Diseases and the Biosecurity Threat 285
- Further Reading 290

9. Interactions with Humans and Other Animals

LYNNE BODDY

- Fungi and Humans: Medical Mycology 293
- Pathogens of Other Vertebrates 309
- Killers of Invertebrates 314
- Fungi as Food and Habitat for Animals 325
- Mutualistic Associations Between Fungi and Animals 328
- Further Reading 334

10. Interactions Between Fungi and Other Microbes

LYNNE BODDY

- Fungal-Fungal Interactions 339
- Interactions Between Fungi and Bacteria 354
- Viruses of Fungi 357
- Interactions Between Fungi and Protists 358
- Further Reading 359

11. Fungi, Ecosystems, and Global Change

LYNNE BODDY

- Introduction 361
- The Roles of Fungi in Element Cycles, Bioconversions, and Energy Flows 362
- Biodiversity and Biogeography of Fungi 365
- Climate Change Responses of Fungi 368
- Land Use Change 381
- Pollution, Pesticides, Fertilisers, Nutrient Distribution, and Recycling 383
- Movement of Biota 390
- Fungal Conservation 391
- Further Reading 398

12. Fungi and Biotechnology

NICHOLAS P. MONEY

- The Industrial Significance of Fungi 401
- The Cultivation of Mushrooms for Food and Pharmaceuticals 401
- Production of Food and Drink Using Yeasts and Filamentous Fungi 404
- Fermentation Technology 411
- Genetic Manipulation of Fungi for Biotechnology 413
- Modern Biotechnological Applications of Filamentous Fungi and Yeasts 415
- Further Reading 424

- Appendix: Glossary of common Mycological (and Related) Terms 425
- Index 431
