

Preface	xiii	2.4. Development of Insect Pathogens for Biological Control	19
Foreword	xv	2.4.1. Viruses	19
Contributors	xvii	2.4.2. Bacteria	20
		<i>Bacillus (Paenibacillus) popilliae</i>	20
		<i>Bacillus thuringiensis</i>	20
		<i>Bacillus sphaericus</i>	21
		2.4.3. Fungi	21
		2.4.4. Microsporidia	21
		2.4.5. Nematodes	22
		2.5. Events that Brought Scientists Together and Advanced the Field	22
		2.6. Unexpected Products of Research on Insect Pathogens	22
		2.7. Conclusions	23
		References	23
1. Scope and Basic Principles of Insect Pathology	1	3. Principles of Epizootiology and Microbial Control	29
<i>Harry K. Kaya and Fernando E. Vega</i>		<i>David I. Shapiro-Ilan, Denny J. Bruck, and Lawrence A. Lacey</i>	
1.1. Introduction	1	3.1. Introduction	29
1.2. Categories of Disease	3	3.2. Epizootiology: Basic Principles	30
1.3. Basic Principles in Insect Pathology	3	3.2.1. The Pathogen Population	31
1.3.1. Entomopathogens	4	Pathogen Density	31
1.3.2. Some Major Classification and Taxonomic Changes	4	Dispersal	32
1.3.3. Portal of Entry	5	Infectivity and Latency	32
1.3.4. Microbial Toxins	5	Virulence	32
1.3.5. Infectivity	7	Strain Effects and Genetics	33
1.3.6. Pathogenicity and Virulence	7	3.2.2. The Host Population	34
1.3.7. Dosage	8	Genetic Resistance	34
1.3.8. Signs, Symptoms, and Syndromes	8	Behavioral Resistance	35
1.3.9. Course of Infection	8	Host Associations	35
1.3.10. Acute, Chronic, and Latent Infections	9	3.2.3. Transmission	36
1.3.11. Koch's Postulates	10	Methods of Transmission	36
1.3.12. Diagnosis	11	Modes of Dissemination	38
References	11	3.2.4. The Environment	38
		Aerial and Aquatic Environments	39
		Edaphic Environment	39
		Interactions among Trophic Levels	40
2. History of Insect Pathology	13		
<i>Elizabeth W. Davidson</i>			
2.1. Introduction	13		
2.2. Early History of the Discovery of Insect Pathogens	13		
2.2.1. Honey Bees	13		
2.2.2. Silkworms	17		
2.3. Early Discoveries of Other Pathogens	17		
2.3.1. Viruses	17		
2.3.2. Bacteria	18		
2.3.3. Fungi	18		
2.3.4. Microsporidia	19		
2.3.5. Nematodes	19		

3.2.5. Modeling Epizootics	41	Transport and Entry into the Nucleus	87
General Concepts in Epizootiological Modeling	41	4.3.2. Replication and Virion Assembly	87
Examples of Epizootiological Models	42	Viral DNA Uncoating	87
3.3. Microbial Control (Applied Epizootiology)	43	Temporally Regulated Viral Gene Expression	87
3.3.1. Basic Concepts in Microbial Control	43	Virogenic Stroma and Peristomal Region Formation, and DNA Replication	89
3.3.2. Factors Affecting Efficacy in Microbial Control	44	Virion Assembly and Budded Virion Egress	91
3.3.3. Improving Efficacy in Microbial Control	46	4.3.3. Secondary Infection	92
Improving the Entomopathogen	46	Route of Infection; Penetration of Basement Membranes	92
Improving Production and Application Methods	48	Tissue Tropism	93
Improving the Environment	50	Cell Entry	93
3.3.4. Approaches to Microbial Control	50	Occlusion-Derived Virion	93
Case Studies: Classical Biological Control	51	Occlusion and Morphogenesis	93
Case Studies: Inoculation	52	4.3.4. Host Response and Pathology	95
Case Studies: Inundation	53	Developmental Resistance Between and Within Instars	95
Case Studies: Conservation	55	Apoptosis	95
3.4. Future Research Directions	55	Immune Responses	96
References	56	Behavioral and Developmental Effects	97
		Cytopathology, Tissue Liquefaction, and Cuticular Weakening	98
4. Baculoviruses and Other Occluded Insect Viruses	73	4.3.5. Ecology	98
Robert Harrison and Kelli Hoover		Transmission	98
4.1. Introduction	74	Host Resistance and Specificity	99
4.2. Classification and Phylogeny	75	Genetic Variation	100
4.2.1. General Characteristics	75	Multitrophic Interactions	101
Morphology: Virions, Occlusion Bodies, and Genomes	75	4.4. Use of Baculoviruses for Insect Pest Control	102
Genetic Definition of a Baculovirus: The Core Genes	79	4.4.1. Factors Involved in Controlling Pests with Baculoviruses	102
4.2.2. Organization of <i>Baculoviridae</i>	79	Host Range	102
Current Classification Scheme: Four Genera	79	Survival Time	102
Phylogeny and Evolution	81	Mass Production	103
4.2.3. Other Occluded Viruses and		Formulation	103
Nudiviruses	81	4.4.2. Case Studies from the Field	104
Entomopoxviruses	81	<i>Helicoverpa zea/Helicoverpa armigera</i> SNPVs	104
Cypoviruses	84	<i>Lymantria dispar</i> MNPV	105
Nudiviruses	84	<i>Anticarsia gemmatilis</i> MNPV	106
4.3. Baculovirus Infection, Replication, Pathology, and Transmission	85	<i>Neodiprion</i> spp. NPVs	106
4.3.1. Primary Infection	85	<i>Cydia pomonella</i> GV	107
Solubilization of Occlusions	85	4.4.3. Recombinant Baculoviruses	107
Penetration of the Peritrophic Matrix and Midgut Cell Entry	86	4.5. Future Research Directions	109
		Acknowledgments	110
		References	110

5. RNA Viruses Infecting Pest Insects 133

*Yan Ping Chen, James J. Becnel,
and Steven M. Valles*

5.1. Introduction	133
5.2. Classification, Phylogeny, Structure, and Genome Organization	135
5.2.1. Alphanodaviruses	136
5.2.2. Dicistroviruses	136
5.2.3. Flaviviruses	141
5.2.4. Iflaviruses	141
5.2.5. Tetraviruses	142
5.2.6. Cypoviruses	142
5.3. Infection, Replication, Pathology, Transmission, and Host Range	144
5.3.1. Alphanodaviruses	144
5.3.2. Dicistroviruses	145
5.3.3. Flaviviruses	150
5.3.4. Iflaviruses	151
5.3.5. Tetraviruses	154
5.3.6. Cypoviruses	156
5.4. Future Research Directions	159
References	160

6. Fungal Entomopathogens 171

*Fernando E. Vega, Nicolai V. Meyling, Janet
Jennifer Luangsa-ard, and Meredith Blackwell*

6.1. Introduction	172
6.2. Classification and Phylogeny	172
6.2.1. Classification of Fungi and Fungus-like Organisms	172
6.2.2. An Overview of Fungal Entomopathogens in a Phylogenetic Context	174
Stramenopiles (Oomycetes)	174
Phylum Microsporidia	175
Zoosporic Fungi	175
Zygosporic Fungi	175
Phylum Ascomycota	176
Phylum Basidiomycota	180
6.3. Biology	181
6.3.1. Reproduction	182
6.3.2. Types of Infective Propagules and Cell Wall Surface Properties	182
6.3.3. The Infection Process	184
Attachment to the Cuticle	184
Spore Germination	185
Cuticle Penetration	186
Insect Responses to Infection	186
6.3.4. Secondary Metabolites	187

6.3.5. Environmental Factors Influencing Stability	188
Ultraviolet Light	188
Temperature	189
Humidity	189

6.4. Ecology 189

6.4.1. Host Range of Fungal Entomopathogens	190
Narrow and Broad Host Ranges: Specialist and Generalist Entomopathogens	190
Cryptic Species and the Use of Molecular Methods for Ecological Studies	191
Host Range Beyond Insects	192
6.4.2. Distribution and Abundance of Fungal Entomopathogens	192
Distribution Patterns of Generalist Fungal Entomopathogens	193
Linking Below- and Above-ground Distribution of Fungal Entomopathogens	195
Are Fungal Entomopathogens Only Associated with Arthropods?	196
Distribution of Specialist Fungal Entomopathogens	196
6.4.3. Trophic Interactions Involving Fungal Entomopathogens	198
Community Modules Including Arthropod-Fungus Interactions: Tritrophic Context	198
Effects of Interactions Among Plants and Fungal Entomopathogens	199
Fungal Entomopathogens as Part of Natural Enemy Communities	201
6.5. Use of Fungal Entomopathogens as Biological Control Agents	202
6.5.1. Pathogenicity, Virulence, and Bioassays	202
6.5.2. Production, Formulation, and Application	203
6.5.3. Some Important Case Studies	204
Gypsy Moth in the USA	204
Locusts and Grasshoppers	205
Spittlebugs in Brazil	205
6.5.4. Commercial Products	205
6.5.5. Genetic Modification of Fungal Entomopathogens	205
6.6. Future Research Directions	206
Acknowledgments	206
References	206

7. Microsporidian Entomopathogens 221

Leellen F. Solter, James J. Becnel,
and David H. Oi

7.1. Introduction	221
7.2. Classification and Phylogeny	222
7.2.1. Overview of Microsporidian Entomopathogens in a Phylogenetic Context	223
<i>Amblyospora/Parathelohania</i> Clade	223
<i>Nosema/Vairimorpha</i> Clade	225
7.2.2. General Characteristics of Microsporidia	226
Morphology	226
Genetic Characters	227
7.3. Life History	229
7.3.1. Infection and Replication	229
7.3.2. Pathology	229
7.3.3. Transmission	230
7.3.4. Environmental Persistence	231
7.3.5. Life Cycles	231
Life Cycles of Microsporidia in the <i>Nosema/Vairimorpha</i> Clade	231
Life Cycle of <i>Vavraia culicis</i>	233
Life Cycle of <i>Edhazardia aedis</i>	233
7.3.6. Epizootiology and Host Population Effects	234
7.3.7. Host Specificity	234
7.4. Biological Control Programs: Case Histories	235
7.4.1. Use of Microsporidia in Biological Control Programs	235
7.4.2. Aquatic Diptera	236
<i>Edhazardia aedis</i>	237
<i>Amblyospora connecticus</i>	238
Life-cycle Based Management Strategies	238
7.4.3. Lepidopteran Pests in Row Crop Systems	239
7.4.4. Grasshoppers and <i>Paranosema</i> <i>locustae</i>	240
7.4.5. Fire Ants in Urban Landscapes	242
<i>Kneallhazia solenopsae</i>	242
<i>Vairimorpha invictae</i>	245
7.4.6. Control of Forest Insect Pests	246
Impacts of Naturally Occurring Microsporidia on Forest Pests	247
Spruce Budworm Microsporidia	247
Microsporidian Pathogens of Gypsy Moth	249
7.4.7. Microsporidia Infecting Biological Control Agents	250

7.5. Future Research Directions	251
References	252

8. Bacterial Entomopathogens 265

Juan Luis Jurat-Fuentes and Trevor A. Jackson

8.1. Introduction	266
8.2. Classification and Phylogeny	267
8.2.1. General Characteristics	268
8.2.2. Classification of Bacterial Entomopathogens	268
8.3. Infection, Replication, Pathology, and Transmission	269
8.3.1. Portals of Entry	269
8.3.2. Pathologies, Symptoms, and Factors Influencing Host Susceptibility	271
8.3.3. Host Response to Infection	272
8.4. Gram-Positive Entomopathogens: Phylum Firmicutes, Class Bacilli, Order Bacillales	272
8.4.1. Family Bacillaceae, Genus <i>Bacillus</i>	272
<i>Bacillus cereus (sensu stricto)</i>	274
<i>Bacillus thuringiensis</i> : Characteristics and Classification	275
<i>Bacillus thuringiensis</i> Ecology, Biology, and Infection	278
General Characteristics of <i>Bacillus thuringiensis</i> Crystal Toxins	281
Regulation of Cry Gene Expression	282
Structure and Classification of Crystal Toxins	283
Crystal Toxin Structure—Function	287
Midgut Proteins Interacting with Crystal Toxins and Toxin Receptors	288
Crystal Intoxication Process	289
Cytolytic Toxins: Description, Regulation, and Classification	293
Structure—Function Relationship in Cytolytic Toxins	294
Non-Crystal Toxins: Vegetative Insecticidal Proteins	295
Exotoxins	295
Other <i>Bacillus thuringiensis</i> Virulence Factors	296
Host Range	297
Improvement of <i>Bacillus</i> <i>thuringiensis</i> Activity	298
Formulation, Delivery Systems, and Enhancers	298
Safety of <i>Bacillus thuringiensis</i> Pesticides and Crops	300

8.4.2. Family Bacillaceae, Genus			
<i>Lysinibacillus</i>	301		
Binary Toxin	302		
Crystal Toxins of <i>Bacillus</i>			
<i>sphaericus</i>	303		
Mosquitocidal Toxins	304		
Other Toxins in <i>Bacillus sphaericus</i>	304		
Formulation, Improvement,			
and Safety	304		
8.4.3. Family Paenibacillaceae	305		
Genus <i>Paenibacillus</i>	305		
Genus <i>Brevibacillus</i>	307		
8.4.4. Other Entomopathogenic Bacteria			
in the Order Bacillales	307		
8.5. Gram-Negative Bacteria	308		
8.5.1. General Introduction to the Group	308		
8.5.2. Family Enterobacteriaceae	309		
<i>Serratia</i> spp.	309		
<i>Serratia</i> Virulence Factors: Sep			
and Tc Toxins	309		
Host Range and Ecology	311		
<i>Yersinia</i> spp	311		
8.5.3. Family Pseudomonadaceae:			
<i>Pseudomonas</i> spp.	312		
8.5.4. Family Coxiellaceae: <i>Rickettsiella</i>			
spp.	312		
8.5.5. New Pathologies from Other Genera	313		
8.5.6. Safety and Registration of			
Non-spore-forming Bacteria	313		
8.6. Other Potentially Pathogenic Bacteria:			
Infection by Mollicutes	314		
8.7. Field use: Examples, Success, and			
Constraints	314		
8.8. Future Research Directions	316		
References	317		
9. <i>Wolbachia</i> Infections in Arthropod			
Hosts	351		
<i>Grant L. Hughes and Jason L. Rasgon</i>			
9.1. Introduction	351		
9.2. Classification and Phylogeny	351		
9.3. Pathogen Versus Mutualist	352		
9.4. Historical Overview of <i>Wolbachia</i> and			
Vector Control	352		
9.5. Reproductive Manipulations	353		
9.5.1. Cytoplasmic Incompatibility	353		
Case Study: <i>Drosophila</i>	354		
Case Studies: <i>Aedes</i> and <i>Culex</i>	354		
9.5.2. Sex Ratio Distorters	356		
Male Killing	356		
Feminization	357		
9.5.3. Parthenogenesis	357		
9.6. Pathogen Interference and			
Pathogen Protection	358		
9.7. Applied Use of <i>Wolbachia</i>	359		
9.8. Future Research Directions	360		
References	360		
10. Protistan Entomopathogens	367		
<i>Carlos E. Lange and Jeffrey C. Lord</i>			
10.1. Introduction	367		
10.2. Classification and Phylogeny	368		
10.3. Associations, Signs, and Symptoms	368		
10.4. Amoebozoa	368		
10.5. Apicomplexa	372		
10.5.1. Eugregarinorida	372		
10.5.2. Neogregarinorida	376		
10.5.3. Coccidia	379		
10.6. Ciliophora	381		
10.7. Euglenozoa	384		
10.8. Helicosporidia	385		
10.9. Future Research Directions	387		
References	387		
11. Nematode Parasites and			
Entomopathogens	395		
<i>Edwin E. Lewis and David J. Clarke</i>			
11.1. Introduction	395		
11.2. Classification and Phylogeny	396		
11.2.1. Insect-parasitic Nematodes	396		
11.2.2. Entomopathogenic Nematodes			
and Symbiotic Bacteria	396		
11.3. Insect-Parasitic Nematodes	398		
11.3.1. Facultative Parasite: <i>Beddingia</i>			
<i>siricidicola</i>	398		
11.3.2. Monoxenous Obligate Parasites:			
No Symbionts	399		
<i>Romanomermis culicivorax</i> :			
Obligate, Lethal Parasite	399		
<i>Paraiontonchium autumnale</i> :			
Obligate, Non-lethal Parasite	400		
11.4. Entomopathogenic Nematodes:			
Monoxenous, Lethal Parasites with			
Symbionts	400		
11.4.1. Life Cycle	401		
11.4.2. History	402		
11.4.3. Symbiotic Relationship	402		
11.4.4. Sampling	402		
11.5. Biodiversity	402		
11.5.1. Entomopathogenic Nematodes	402		
11.5.2. Symbiotic Bacteria	403		

11.6. Infective Stage Juvenile and Bacterial Storage	403	13. Physiology and Ecology of Host Defense Against Microbial Invaders	461
11.7. Infection	404	<i>Jonathan G. Lundgren and Juan Luis Jurat-Fuentes</i>	
11.7.1. Infective Stage Juvenile Host Finding, Recognition, and Penetration	404	13.1. Introduction	461
11.7.2. Release of Bacteria	407	13.2. Behavioral and Physical Barriers to Infection	462
11.7.3. Overcoming the Insect Immune System	408	13.2.1. Behavioral Avoidance of Pathogens	462
Nematode Contribution	408	Avoidance Behavior	462
Bacterial Contribution	408	Antiseptic Behavior	463
11.8. Nutrition Within the Insect	409	13.2.2. Morphological Barriers to Infections	463
11.9. Natural Populations and Host Associations	410	Cuticle	464
11.9.1. Natural Host Affiliations	410	Digestive and Tracheal Systems	464
11.9.2. Population Structure in Nature	412	13.3. Physiological Response to Infections	465
11.10. Aging and Lifespan	413	13.3.1. Distinguishing Self from Non-self from Altered Self	465
11.11. Survival Mechanisms	415	13.3.2. Humoral Response System	466
11.11.1. Desiccation	415	Antimicrobial Peptides	466
11.11.2. Osmotic Stress	416	Regulation of Humoral Defenses	467
11.11.3. Temperature Extremes	416	13.3.3. Cellular Response System	467
11.12. Future Research Directions	417	Hemocytes	467
