Preface xv

1. Developmental Checkpoints and Feedback Circuits Time Insect Maturation 1

Kim F. Rewitz, Naoki Yamanaka, and Michael B. O'Connor

- 1. Introduction 2
- 2. Checkpoint Controls for Progression of Development 4
- 3. Signals Converging on the PG 14
- 4. Shaping Discrete Ecdysone Pulses 21
- 5. Summary and Perspectives 23
- Acknowledgments 26
- References 26

2. What Goes Up Must Come Down: Transcription Factors Have Their Say in Making Ecdysone Pulses 35

Qiuxiang Ou and Kirst King-Jones

- 1. Introduction 36
- 2. Historical Perspective 37
- 3. The Ecdysone Hierarchy I: Hormone Action at the Onset of Metamorphosis 39
- 4. The Ecdysone Hierarchy II: Early Response Genes 41
- 5. The Ecdysone Hierarchy III: Early-Late Response Genes and *ftz-ft* 43
- 6. Upstream of the Hormone: Ecdysone Synthesis in the Prothoracic Glands 44
- 7. Role Reversal: The Ecdysone Hierarchy Regulates Its Own Hormone 49
- 8. *broad* Controls a Key Component of Cellular Cholesterol Transport 52
- 9. *DHR4* is a Key Mediator of PTTH Signaling 54
- 10. *DHR3/E75*-Mediated NO Signaling Is a Critical Player of Ecdysteroidogenesis 56
- 11. Other Transcription Factors with Known Expression in the Prothoracic Gland 59
- References 63

3. Hormonal Regulation of Insect Metamorphosis with Special Reference to Juvenile Hormone Biosynthesis 73

Kiyoshi Hiruma and Yu Kaneko

- 1. Introduction 74
- 2. Regulation of JH Biosynthesis 77

3. Molecular Action of JH on Insect Molting and Metamorphosis	90
4. Conclusion	93
Acknowledgments	94
References	94
4. The Role of Autophagy in <i>Drosophila</i> Metamorphosis	101
Kirsten Tracy and Eric H. Baehrecke	
1. Introduction	102
2. Autophagy	102
3. <i>Drosophila</i> as a Model for Studying the Interface Between Steroid Signaling, Nutrition, and Growth During Development	105
4. Autophagy and <i>Drosophila</i> Development	109
5. Conclusions	117
Acknowledgments	118
References	118
5. Metamorphosis in Teleosts	127
Sarah K. McMenamin and David M. Parichy	
1. Introduction and Definitions	128
2. Metamorphic Diversity in Teleosts	130
3. Endocrine Controls of Teleost Metamorphosis	140
4. Local Mechanisms of Morphogenetic Changes	148
5. Conclusions	153
References	154
6. Flatfish: An Asymmetric Perspective on Metamorphosis	167
Alexander M. Schreiber	
1. Introduction	168
2. Genetic Basis of Flatfish Asymmetry	169
3. Metamorphic Asymmetry of the Brain, Sensory Organs, and Behavior	178
4. Asymmetric Craniofacial Remodeling and the Basis of Eye Migration	181
5. Flatfish Evolution: A Developmental Perspective	187
Acknowledgments	188
References	188
7. Neuroendocrinology of Amphibian Metamorphosis	195
Robert J. Denver	
1. Hormonal Control of Metamorphosis	196
2. Neuroendocrine Control of Metamorphosis	205

3. Role of the Neuroendocrine System in Mediating Environmental Influences on the Timing of Metamorphosis	214
Acknowledgment	217
References	217

8. Salamander Paedomorphosis: Linking Thyroid Hormone to Life History and Life Cycle Evolution 229

Carlena K. Johnson and S. Randal Voss

1. What is Paedomorphosis and Why Salamanders?	230
2. Paedomorphosis and Salamander Life History Variation	234
3. Hormonal Basis of Salamander Metamorphosis	237
4. Hormonal Basis of Paedomorphosis	239
5. Paedomorphosis in the Mexican Axolotl	241
6. Genomic Analysis of Salamander Metamorphosis and Paedomorphosis	243
7. Genetic Analysis of Paedomorphosis	246
8. The Link Between <i>met1</i> and TH Regulation of Metamorphosis	248
9. What Genes Map to Metamorphic Timing QTL?	249
10. Synthesis: Evolution of Salamander Paedomorphosis	250
References	252

9. Metamorphosis in a Frog That Does Not Have a Tadpole 259

Richard P. Elinson

1. Introduction	260
2. Loss of Tadpole Structures in Frog Direct Development	260
3. Thyroid Hormone Dependency in Frog Direct Development	263
4. Mechanisms Underlying Tadpole Deletion	265
5. Precocious Appearance of Frog Features in Direct Developers	267
6. A Possible Role for Maternal Thyroid Hormone and Thyroid Hormone Receptor	269
7. Questions for the Future	271
References	272

10. High-Throughput Sequencing Will Metamorphose the Analysis of Thyroid Hormone Receptor Function During Amphibian Development 277

Alexis G. Grimaldi, Nicolas Buisine, Patrice Bilesimo, and Laurent M. Sachs

1. Introduction	278
2. <i>Xenopus tropicalis</i> Genomic Sequence and Annotation: Current State	280
3. TH and TR Regulating Network Using NGS-Based Transcriptome Analysis	287

4. TR Interactome	292
5. Conclusion	299
Acknowledgments	300
References	300
11. Establishment of Intestinal Stem Cell Niche During Amphibian Metamorphosis	305
Atsuko Ishizuya-Oka and Takashi Hasebe	
1. Introduction	306
2. Adult Epithelial Development During Intestinal Remodeling	307
3. Origin of Adult Stem Cells	309
4. Niche Essential for Adult Stem Cell Development	311
5. Signaling Pathways Involved in Establishment of Stem Cell Niche	313
6. Evolutionary Consideration and Prospect	319
Acknowledgments	321
References	321
12. Developmental Programs and Endocrine Disruption in Frog Metamorphosis: The Perspective from Microarray Analysis	329
Saurabh S. Kulkarni and Daniel R. Buchholz	
1. Introduction	330
2. Developmental Programs	340
3. Endocrine Disruption	351
4. Special Topics	356
5. Summary and Conclusions	358
Acknowledgments	361
References	361
13. Is Thyroid Hormone Signaling Relevant for Vertebrate Embryogenesis?	365
G. Morvan-Dubois, J.B. Fini, and B.A. Demeneix	
1. Introduction	366
2. Both TRs and Deiodinases are Expressed During Embryogenesis	367
3. Both T_3 and T_4 are Present During Embryonic Stages	373
4. What Roles Does TH Signaling Have During Early Development?	377
5. Does TH Signaling During Early Development Represent a New Scenario for Endocrine Disruption?	379
6. Conclusion	383
Acknowledgments	387
References	387

14. Thyroid Hormones and Postembryonic Development in Amniotes 397

Guillaume Holzer and Vincent Laudet

1. Introduction	398
2. TH Signaling: The Basics	399
3. TH Controls Metamorphosis in Amphibians	402
4. TH-Regulated Metamorphosis is an Ancestral Chordate Character	405
5. Mammals	406
6. Sauropsids	415
7. Conclusion	419
Acknowledgments	420
References	420

Index 427

Guillaume Holzer
Laboratoire d'Evolution des Régulations Endocriniennes, Muséum National d'Histoire
Naturelle, Département Régulation, Développement et Diversité Moléculaire, UMR 7221
CNRS, Paris, France

Vincent Laudet
Laboratoire d'Evolution des Régulations Endocriniennes, Muséum National d'Histoire
Naturelle, UMR 7221 CNRS, Département R.D.M., Paris, France

Robert J. Denver
Department of Molecular, Cellular and Developmental Biology, and Department of Ecology
and Evolutionary Biology, The University of Michigan, Ann Arbor, Michigan, USA

Richard P. Ekinsen
Department of Biological Sciences, Duquesne University, Pittsburgh, Pennsylvania, USA

J.B. Flol
Laboratoire d'Evolution des Régulations Endocriniennes, Muséum National d'Histoire
Naturelle, UMR 7221 CNRS, Département R.D.M., Paris, France

Alexis C. Grimaldi
Laboratoire d'Evolution des Régulations Endocriniennes, Muséum National d'Histoire
Naturelle, Département Régulation, Développement et Diversité Moléculaire, UMR 7221
CNRS, Paris, France

Takanishi Harabe
Department of Biology, Nippon Medical School, Kawasaki, Kanagawa, Japan

Kiyoshi Hiruma
Faculty of Agriculture and Life Sciences, Yamaguchi University, Yamaguchi, and Graduate School
of Agricultural Sciences, Iwate University, Morioka, Japan

Present address: The Graduate Research Center, Perleberg School of Management, University of Pennsylvania,
Philadelphia, Pennsylvania, USA
