Preface.....	xi

Dynamics of Lesion Processing by Bacterial Nucleotide Excision Repair Proteins 1

Neil M. Kad and Bennett Van Houten

I. Structural Insights of Bacterial Nucleotide Excision Repair.....	2
II. So Few DNA Repair Proteins, So Much DNA: Defining the Big Problem	4
III. Damage Searching by UvrA ₂ and UvrA ₂ B ₂	14
IV. Future Directions	17
References	19

Transcription-Coupled DNA Repair in Prokaryotes 25

Ann Ganesan, Graciela Spivak, and Philip C. Hanawalt

I. Introduction	25
II. Background: Genomic Heterogeneity in NER and the Discovery of TCR	26
III. The Role of RNA Polymerase in TCR.....	28
IV. The Role of <i>Mfd</i> in TCR	29
V. The Role of <i>UvrA</i> in TCR	32
VI. The Role of <i>UvrB</i> in TCR	33
VII. Other Examples of Transcription-Related DNA Damage Processing in Bacteria.....	34
VIII. Conclusions	35
Acknowledgments	36
References	36

The Functions of MutL in Mismatch Repair: The Power of Multitasking 41

Alba Guarné

I. Overview of DNA Mismatch Repair.....	42
---	----

II. MutL is a Multidomain Protein.....	47
III. Architecture of the Endonuclease Domain.....	53
IV. Regulation of the Endonuclease Activity of MutL.....	58
V. Concluding Remarks.....	62
References.....	63

The Fpg/Nei Family of DNA Glycosylases: Substrates, Structures, and Search for Damage 71

Aishwarya Prakash, Sylvie Doublié, and Susan S. Wallace

I. Introduction.....	71
II. Fpg/Nei Phylogeny.....	73
III. Fpg/Nei Structures.....	74
IV. Glycosylases Search for Lesions.....	83
V. Concluding Remarks.....	85
Acknowledgments.....	85
References.....	85

Regulation of Base Excision Repair in Eukaryotes by Dynamic Localization Strategies 93

Daniel B. Swartzlander, Nicholas C. Bauer, Anita H. Corbett, and Paul W. Doetsch

I. Base Excision Repair.....	94
II. Dynamic Localization of BER Proteins.....	102
III. Hypotheses on the Orchestration of Dynamic Localization.....	107
References.....	109

Oxidized Base Damage and Single-Strand Break Repair in Mammalian Genomes: Role of Disordered Regions and Posttranslational Modifications in Early Enzymes 123

Muralidhar L. Hegde, Tadahide Izumi, and Sankar Mitra

I. Oxidative DNA Damage and Its Repair in Mammalian Cells.....	124
II. Complexity and Sub-pathways of BER/SSBR.....	132
III. Nonconserved Terminal Extensions in Mammalian Early BER Proteins.....	134
IV. Posttranslational Modifications in Early BER Proteins.....	137
V. BER/SSBR Deficiency in Human Diseases.....	139
VI. Conclusions and Future Perspectives.....	142
Acknowledgments.....	143
References.....	143

Homologous Recombination in Eukaryotes 155

Ravindra Amunugama and Richard Fishel

I. Meiosis	156
II. DSB Repair in Somatic Cells	158
III. RAD52 Epistasis Group	163
IV. Recombination Mediators	167
V. RAD51 Paralogs	172
VI. DSB Repair in Chromatin	175
VII. Postsynaptic Removal of RAD51	180
VIII. Second-End Capture	181
IX. dHJ Dissolution	181
X. Holliday Junction Resolution	181
XI. Homologous Recombination: The Interplay Between Mismatch Repair and HR	183
XII. Conclusion	184
References	184

Overview for the Histone Codes for DNA Repair 207Elizabeth A. Williamson, Justin W. Wray, Pranshu Bansal,
and Robert Hromas

I. Histone Modifications of Homologous Recombination Repair	208
II. Histone Modifications of NHEJ	215
III. Histone Modifications of Nucleotide Excision Repair	217
IV. Histone Modifications of Base Excision Repair	219
V. DNA Mismatch Repair and Histone Modifications	220
References	222

**The RSC and INO80 Chromatin-Remodeling
Complexes in DNA Double-Strand Break
Repair 229**

Anna L. Chambers and Jessica A. Downs

I. Introduction	230
II. RSC	232
III. INO80	244
IV. Perspectives	253
Acknowledgments	254
References	254

Mechanistic Links Between ATM and Histone Methylation Codes During DNA Repair 263

Ye Xu, Chang Xu, and Brendan D. Price

I. The DNA Damage Response.....	264
II. <i>Ataxia telangiectasia</i> and the ATM Kinase.....	265
III. The Tip60 Acetyltransferase.....	269
IV. H3K9me3 and DDR.....	275
V. Conclusions and Implications for Cancer Therapy.....	280
Acknowledgments.....	281
References.....	281

Exploiting Synthetic Lethal Interactions Between DNA Damage Signaling, Checkpoint Control, and p53 for Targeted Cancer Therapy 289

Sandra Morandell and Michael B. Yaffe

I. Introduction.....	290
II. The Concept of Synthetic Lethality in Cancer Therapy.....	295
III. Synthetic Lethality Between PARP1 and BRCA1/2 as a Model for Enhancing DNA Damage-Induced Cell Death.....	295
IV. Synthetic Lethality in the Context of p53 Mutations.....	297
V. Potential for Future Therapies.....	305
References.....	307
Index.....	315
