

Contents

Preface ix

A Note on References xi

I

INTRODUCTORY SECTION

1. Introduction: The Aims and Structure of This Book 3
2. Key Principles of Morphogenesis 7
3. The Power and Limitations of Self-Assembly 17

II

CELL SHAPE AND CELL MORPHOGENESIS

4. Morphogenesis of Individual Cells: A Brief Overview 33
5. Animal Cell Shape: The Importance of the Cytoskeleton 41
6. Cellular Morphogenesis in Plants 61

III

CELL MIGRATION

7. Cell Migration in Development: A Brief Overview 77
8. The Nano-Machinery of Locomotion 85
9. Guidance by Chemotaxis 99
10. Guidance by Galvanotaxis 117

11. Guidance by Contact 129
12. Waypoint Navigation in the Embryo 147
13. Cooperative Migration of Mesenchymal Cells 163
14. Condensation of Cells 171

IV

EPITHELIAL MORPHOGENESIS

15. The Epithelial State: a Brief Overview 183
16. Neighbour Exchange and Convergent Extension 195
17. Closure of Holes 207
18. Invagination and Evagination: The Making and Shaping of Folds and Tubes 217
19. Epithelial Fusion 235
20. Epithelial Branching 247
21. Boundaries to Epithelial Movement 273

V

MORPHOGENESIS BY CELL PROLIFERATION AND DEATH

22. Growth, Proliferation and Death: A Brief Overview 283
23. Morphogenesis by Orientated Cell Division 307
24. Morphogenesis by Elective Cell Death 325

VI

**MODELLING
MORPHOGENESIS**

25. Modelling Morphogenesis: A Brief
Overview 339
26. Mechanical and Mathematical Models of
Morphogenesis 347
27. Modelling Using Living Cells: Tissue
Engineering and Synthetic
Morphology 365

VII

**CONCLUSION AND
PERSPECTIVES**

28. Conclusions and Perspectives 377

Index 391
