Volumes in Series

xix

1. Expression of GPCRs in *Pichia pastoris* for Structural Studies 1

Christoph Krettler, Christoph Reinhart, and Carville G. Bevans

1. Introduction 2
2. Generation of Expression Clones 4
3. Screening Transformants 10
4. Characterization and Optimization of Initial Target Receptor Production 15
5. Large-Scale Production 21
6. Prospects for Large-Scale GPCR Production in *P. pastoris* 26
- Acknowledgments 27
- References 27

2. Conformational Ensemble View of G Protein-Coupled Receptors and the Effect of Mutations and Ligand Binding 31

Ravinder Abrol, Soo-Kyung Kim, Jenelle K. Bray, Bartosz Trzaskowski, and William A. Goddard III

1. Introduction 32
2. Overview of the Conformational Ensemble Prediction 35
3. Generating Starting Structures Based on Templates 36
4. BiHelix: TM Bundle Conformational Sampling of Helix Rotation Angles 38
5. SuperBiHelix TM Bundle Sampling of All Helix Orientation Angles 40
6. Effect of Mutations on the WT Conformational Ensemble 41
7. Ensemble Docking of Ligands to WT or Mutant Receptors 42
8. Summary 46
- Acknowledgments 46
- References 46

3. Structural Evolution of G-Protein-Coupled Receptors: A Sequence Space Approach 49

Jean-Michel Bécu, Julien Pelé, Patrice Rodien, Hervé Abdi, and Marie Chabbert

1. Introduction 50

2. The Puzzle of GPCR Evolution	51
3. The Evolution of Class A GPCRs Viewed by MDS	54
4. Evolutionary Trends	58
5. Structural Evolution of GPCRs	62
6. Summary	64
Acknowledgments	64
References	64
 4. Directed Evolution of G-Protein-Coupled Receptors for High Functional Expression and Detergent Stability	67
Karola M. Schlinkmann and Andreas Plückthun	
1. Introduction	68
2. Methods	74
Acknowledgments	94
References	95
 5. The Role of Hydrophobic Amino Acids in the Structure and Function of the Rhodopsin Family of G Protein-Coupled Receptors	99
Gianluigi Caltabiano, Angel Gonzalez, Arnau Cordoní, Mercedes Campillo, and Leonardo Pardo	
1. Introduction	100
2. The Structure of GPCRs	100
3. Sequence Analyses of the 7TM Segments of the Rhodopsin Family of GPCRs	102
4. Importance of the Highly Conserved Hydrophobic Amino Acid at Position 3.40 in the Process of Agonist-Induced Receptor Activation	103
5. The Hydrophobic Cages of Arginine of the (D/E)RY Motif in TM3, Tyrosine of the (N/D)PxxY Motif in TM7, and Tyrosine in TM5	104
6. The Transmembrane Aqueous Channel is Interrupted by a Layer of Hydrophobic Residues	106
7. The Role of Highly Conserved Hydrophobic Residues in G Protein Binding	106
8. The Role of Highly Conserved Hydrophobic Residues in Receptor Oligomerization	108
9. Conclusions	110
Acknowledgments	110
References	110

6. Structure of β-Adrenergic Receptors	117
Florian Brueckner, Chayne L. Piscitelli, Ching-Ju Tsai, Jörg Standfuss, Xavier Deupi, and Gebhard F.X. Schertler	
1. Introduction	118
2. Toward the Structures of β -Adrenergic Receptors	119
3. Lessons from the Structures of β -Adrenergic Receptors	141
4. Outlook	146
Acknowledgments	147
References	147
7. Advances in Methods to Characterize Ligand-Induced Ionic Lock and Rotamer Toggle Molecular Switch in G Protein-Coupled Receptors	153
Xiang-Qun Xie and Ananda Chowdhury	
1. Introduction	154
2. Experimental Principles	158
3. Detailed Experimental Procedure	161
Acknowledgments	171
References	171
8. Crystallogensis of Adenosine A_{2A} Receptor—T4 Lysozyme Fusion Protein: A Practical Route for the Structure	175
Yashwanth Ashok, Rahul T. Nanekar, and Veli-Pekka Jaakola	
1. Introduction	176
2. Generation of Fusion Receptors for Crystallogensis	178
3. Small-Scale Purification	184
4. Analytical Size-Exclusion Chromatography	185
5. Other Analytical Methods	188
6. Ligand and Additive Selection	188
7. Large-Scale Purification of Receptors	191
8. Crystallization	193
9. Crystal Testing and Data Collection	195
10. Summary	196
Acknowledgments	196
References	196
9. Probing GPCR Structure: Adenosine and P2Y Nucleotide Receptors	199
Kenneth A. Jacobson, Stefano Costanzi, and Francesca Deflorian	
1. Introduction	200

2. Receptors for Extracellular Nucleosides and their Modeled Structures	202
3. Receptors for Extracellular Nucleotides and their Modeled Structures	207
4. Neoreceptors: Reengineering GPCRs for Recognition of Modified Agonists	210
Acknowledgment	214
References	215
10. Strategies for Studying the Ligand Binding Site of GPCRs: Photoaffinity Labeling of the VPAC1 Receptor, a Prototype of Class B GPCRs	219
Alain Couvineau, Yossan-Var Tan, Emilie Ceraudo, and Marc Laburthe	
1. Introduction	220
2. The VPAC1 Receptor, an Archetype of the Class B GPCRs	223
3. Photoaffinity Labeling of the VPAC1 Receptor	224
4. Chemical and Enzymatic Cleavages of Photoaffinity-Labeled VPAC1	227
5. Identification of the VPAC1 Residue Covalently Linked to the ¹²⁵ I-Bpa Probe by Edman Degradation Sequencing or "Met-Scan" Procedures	230
6. Summary	233
Acknowledgments	234
References	234
11. Expression of Mammalian G Protein-Coupled Receptors in <i>Caenorhabditis elegans</i>	239
Beata Jastrzebska, David Salom, Hui Jin, Pengxiu Cao, Wenyu Sun, Krzysztof Palczewski, and Zhaoyang Feng	
1. Introduction	240
2. Expression of Transgenic GPCRs in <i>C. elegans</i>	240
3. Detection of Heterologous GPCR Gene Expression	242
4. Large-Scale Expression of Heterologous GPCRs	245
5. Purification of Heterologous GPCRs	246
6. Determination of Transgenic GPCR Activity and Function	248
7. Concluding Remarks	254
Acknowledgments	254
References	254
12. Expression, Purification, and Structural Analysis of Intracellular C-Termini from Metabotropic Glutamate Receptors	257
Angela Seebahn, Heinrich Sticht, and Ralf Enz	
1. Introduction	259
2. Synthesis of mGluR-CT	261

3. Structural Analysis	266
Acknowledgments	278
References	278
13. Unnatural Amino Acid Mutagenesis of GPCRs Using Amber Codon Suppression and Bioorthogonal Labeling	281
Thomas Huber, Saranga Naganathan, He Tian, Shixin Ye, and Thomas P. Sakmar	
1. Introduction	282
2. Site-Specific Introduction of Chemically Reactive Handles in Proteins by UAA Mutagenesis	283
3. Luciferase as a Tool to Optimize the UAA Mutagenesis Method	286
4. Luciferase as a Tool to Evaluate Bioorthogonal Chemical Ligation Reactions to Modify UAAs	288
5. Synthesis of Probes with Reactive Groups for Bioorthogonal Reactions	291
6. Site-Specific Labeling of Membrane Proteins using Chemically Reactive Handles Introduced by Site-Directed UAA Mutagenesis	294
7. Extension of the Labeling Strategy to GPCRs of Unknown Structure	299
8. Engineering Constraints of Site-Specific Attachment of Fluorophores	300
9. Conclusions	302
Acknowledgments	303
References	303
14. Mapping a Ligand Binding Site Using Genetically Encoded Photoactivatable Crosslinkers	307
Amy Grunbeck, Thomas Huber, and Thomas P. Sakmar	
1. Introduction	308
2. Targeted Photocrosslinking in Live Cells Using Genetically Encoded Photocrosslinkers	309
3. Analysis of GPCR–Ligand Complexes	313
4. Conclusion	319
References	321
15. Alternative mRNA Splicing of G Protein-Coupled Receptors	323
Danijela Markovic	
1. Introduction	324
2. Establishment of Primary hMSMCs	326
3. Detection of Alternatively Spliced mRNA	327
4. Quantification of Alternatively Spliced mRNAs Using Real-Time qPCR	331

5. Summary	333
Acknowledgments	334
References	334
16. Functional Residues Essential for the Activation of the CB1 Cannabinoid Receptor	337
Joong-Youn Shim and Lea Padgett	
1. Introduction	338
2. The HU210-CB1 Receptor Model Representing an Early Stage of the Activated State	339
3. The HU210-CB1 Receptor in the Active State	340
4. Potential Functional Residues of the CB1 Receptor	346
5. Emerging Picture of the Molecular Mechanism of CB1 Receptor Activation	352
Acknowledgments	353
References	353
Author Index	357
Subject Index	375
