III

SOMATO-DENDRITIC PROCESSING AND PLASTICITY OF POSTSYNAPTIC POTENTIALS

I NEURONS: EXCITABLE AND SECRETORY CELLS THAT ESTABLISH SYNAPSES

1. Neurons	3
2. Neuron-glial cell cooperation	25
3. Ionic gradients, membrane potential and ionic currents	39
4. The voltage-gated channels of Na ⁺ action potentials	55
5. The voltage-gated channels of Ca ²⁺ action potentials: Generalization	93
6. The chemical synapses	121
7. Neurotransmitter release	145

II

IONOTROPIC AND METABOTROPIC RECEPTORS IN SYNAPTIC TRANSMISSION

8. The ionotropic nicotinic acetylcholine receptors	173
9. The ionotropic GABA _A receptor	199
10. The ionotropic glutamate receptors	221
11. The metabotropic GABA _B receptors	245
12. The metabotropic glutamate receptors	269

13. Somato-dendritic processing of postsynaptic potentials I: Passive properties of dendrites	285
14. Subliminal voltage-gated currents of the somato-dendritic membrane	293
15. Somato-dendritic processing of postsynaptic potentials II. Role of sub-threshold depolarizing voltage-gated currents	311
16. Somato-dendritic processing of postsynaptic potentials III. Role of high-voltage-activated depolarizing currents	327
17. Firing patterns of neurons	343
18. Synaptic plasticity	361

IV

THE HIPPOCAMPAL NETWORK

19. The adult hippocampal network	393
20. Maturation of the hippocampal network	411
Contributors	425
Index	427
