Preface	xi
Acknowledgments	xv

I INTRODUCTION AND OVERVIEW

1.1 Interesting Times: The Translational Dilemma and the Need for Translational Systems Biology of Inflammation.....	3
Primary Goal: Facilitate the Translation of Basic Biomedical Research to the Implementation of Effective Clinical Therapeutics	6
How to Approach This Book	7
References.....	8

II THE CURRENT LANDSCAPE: WHERE IT CAME FROM, HOW WE GOT HERE, AND WHAT IS WRONG

2.1 A Brief History of the Philosophical Basis of the Scientific Endeavor: How We Know What We Know, and How to Know More	11
Models in the Cave.....	12
Earth at the Center: A Reasonable Mistake, and an Unreasonable Perpetuation	13
The Scientific Method of Francis Bacon.....	13
Newton: The (Justifiable) Origins of Physics Envy	14
The Problem of Induction: Hume's Empiricism.....	16
Logic and Its True/False Promise: Logical Positivism, Godel and Popper.....	16
Charles Peirce Suggests Taking a Guess: The Abductive Approach	17
The Mapping Problem: Back to Plato?.....	18
Suggested Additional Readings.....	19
2.2 A Brief History of Biomedical Research up to the Molecular Biology Revolution.....	21
Reference	25
Suggested Additional Readings.....	25
2.3 Biomedical Research Since the Molecular Revolution: An Embarrassment of Riches.....	27
References.....	33
2.4 Randomized Clinical Trials: A Bridge Too Far?.....	35
References.....	40
2.5 Complexity in Biomedical Research: Mysticism Versus Methods.....	41
References.....	44
Suggested Additional Readings.....	44

2.6 Human Nature, Politics, and Translational Inertia	45
Setting the Table with Bacon	46
An Embarrassment of Riches	49
Shibboleths in Science: The Problem with Pedigrees	50
Incentives and the Professionalization of Science	51
Deep Pockets, with Holes: The Pharma Conundrum	52
Reference	53

III TRANSLATIONAL SYSTEMS BIOLOGY: HOW WE PROPOSE TO FIX THE PROBLEMS OF THE CURRENT BIOMEDICAL RESEARCH LANDSCAPE

3.1 Towards Translational Systems Biology of Inflammation	57
Primary Goal: <i>Facilitate the Translation of Basic Biomedical Research to the Implementation of Effective Clinical Therapeutics</i>	58
References	61
3.2 Dynamic Knowledge Representation and the Power of Model Making	63
References	68
3.3 A Roadmap for a Rational Future: A Systematic Path for the Design and Implementation of New Therapeutics	69
Rational Evaluation of Drug Candidates: Knowing What Might Work, and More Importantly, What Won't	69
<i>In silico</i> Clinical Trials: Crossing the "Bridge Too Far"	71
From Populations to Individuals: Personalizing Medical Care	76
References	78

IV TOOLS AND IMPLEMENTATION OF TRANSLATIONAL SYSTEMS BIOLOGY: THIS IS HOW WE DO IT

4.1 From Data to Knowledge in Translational Systems Biology: An Overview of Computational Approaches Across the Scientific Cycle	81
Patterns in Physiology: Is There a "There" There?	84
Patterns of Molecules	84
References	86
4.2 Data-Driven and Statistical Models: Everything Old Is New Again	89
Traditional Statistical Approaches to Analyzing Data	90
Data-Driven Modeling in Systems and Computational Biology	91
Statistical and Data-Driven Modeling: A Place for Big Data in Translational Systems Biology?	95
References	96
4.3 Mechanistic Modeling of Critical Illness Using Equations	99
Modeling Inflammation Using ODEs	99
References	108

4.4 Agent-Based Modeling and Translational Systems Biology: An Evolution in Parallel.....	111
Things Doing Things and the Wisdom of Crowds	111
Properties of Agent-Based Models.....	113
Agent-Based Modeling of Inflammation and the Development of Translational Systems Biology.....	115
Initial Simulations of Clinical Populations and <i>In Silico</i> Clinical Trials.....	116
Providing New Perspectives on Clinical Conditions.....	117
Integration and Unification: Linking Disease Processes, Biological Knowledge and Clinical Phenotypes.....	121
Integration and Unification: Bringing Together Biomedical Knowledge by Putting Humpty Dumpty Together Again	128
Resources for Agent-Based Modeling and Suggested Reading.....	132
References.....	132
4.5 Getting Science to Scale: Accelerating the Development of Translational Computational Models.....	137
The Structure of the CMA.....	141
Knowledge Bases in the CMA.....	142
Fulfilling the Goals of Translational Systems Biology and the Democratization of Biomedical Science	144
References.....	145

V A NEW SCIENTIFIC CYCLE FOR TRANSLATIONAL RESEARCH AND HEALTH-CARE DELIVERY

5.1 What Is Old Is New Again: The Scientific Cycle in the Twenty-First Century and Beyond	149
Everything Old Is New Again	149
"Data" Is not the Answer; Knowledge Is.....	150
High-Throughput Dynamic Knowledge Representation: A Community Effort.....	152
Success Through Failure	154
A Case for Disruption of the Fragmented Continuum.....	155
References.....	157
Index.....	159
