Preface

xi

1. Functional Architecture of the Cell's Nucleus in Development, Aging, and Disease

1

Brian Burke and Colin L. Stewart

1. Introduction	2
2. The Laminopathies	13
3. Mouse Models for the A-Type Laminopathies	14
4. Laminopathies Associated with Mutations in the B-Type Lamins	28
5. Diseases Resulting from NE Protein Mutations	29
Acknowledgments	37
References	38

2. Mouse Models of Lipodystrophy and Their Significance in Understanding Fat Regulation

53

Justin J. Rochford

1. Introduction	54
2. Lipodystrophy Syndromes	57
3. Genes Mutated in Congenital Generalized Lipodystrophy	61
4. Genes Disrupted in Familial Partial Lipodystrophies	73
5. Limitations of the Current Models and Perspectives for the Future	84
6. Conclusions	86
References	86

3. Mouse Models of Neurodevelopmental Disease of the Basal Ganglia and Associated Circuits

97

Samuel S. Pappas, Daniel K. Leventhal, Roger L. Albin, and William T. Dauer

1. Introduction	98
2. Diseases and Links to Striatal Dysfunction	99
3. Striatal Organization and Function	107
4. Disease Mechanisms and Mouse Models	123
5. OCD-Spectrum Disorders and Rodent Models	124
6. Rett Syndrome and Mouse Models	133
7. Primary Dystonia	138

8. Concluding Remarks	146
References	147
4. Mouse Models of Heart Failure: Cell Signaling and Cell Survival	171
Lorna R. Fiedler, Evie Maifoshie, and Michael D. Schneider	
1. Heart Failure: The Unmet Need	172
2. Pathobiological Features	175
3. Cardiac Muscle Cell Apoptosis in Heart Failure: Death Kills	177
4. Pathways Executing Cardiac Muscle Cell Death	183
5. Recapitulating Specific Mutations Associated with Heart Failure in Mice	192
6. Mitogen-Activated Protein Kinases in Heart Failure	201
7. Neurohormonal Responses: G proteins and G protein-Coupled Receptors	208
8. Neurohumoral Responses: TNF- α	218
9. Discussion: Protecting the Myocardium	220
References	227
5. Mouse Models and Aging: Longevity and Progeria	249
Chen-Yu Liao and Brian K. Kennedy	
1. Introduction	249
2. Mouse Models Analyzing the GH/IGF-1 Axis	254
3. Mouse Models Analyzing Target of Rapamycin Signaling	258
4. Mouse Models Analyzing Sirtuin Function	260
5. Mouse Models of Inflammation	261
6. Mouse Models of DR or Calorie Restriction	262
7. Mouse Models of Progeria	264
8. Mouse Models Analyzing DNA Repair and Genomic Stability	268
9. Mouse Models Resulting in Tumorigenesis	270
10. Mouse Models Analyzing Oxidative Stress	271
11. Summary	273
Acknowledgments	274
References	274
6. LINC Complex Proteins in Development and Disease	287
Henning F. Horn	
1. Introduction to the LINC Complex	288
2. The LINC Complex in Plants	293
3. LINC Complex in Yeast	293
4. The LINC Complex in <i>Caenorhabditis elegans</i>	294
5. The LINC Complex in <i>Drosophila melanogaster</i>	295
6. LINC Complex Proteins in Mammals	296

7. Mouse Models of LINC Complex Proteins	302
8. Diseases of the LINC Complex	311
9. Conclusions	314
Acknowledgments	314
References	315
