Contributors.....	xi
Preface.....	xv

Generation of Induced Pluripotent Stem Cells from Somatic Cells 1

Young-Doug Sohn, Ji Woong Han, and Young-sup Yoon

I. Generation of iPSCs	2
II. Methods of Delivering Transcription Factors into Cells.....	4
III. Nongenetic Approaches for Reprogramming.....	8
IV. Generation of Human iPSCs from Different Somatic Cell Types.....	10
V. Characterization of iPSCs.....	11
VI. Conclusion	18
References	19

Induced Pluripotent Cells in Cardiovascular Biology: Epigenetics, Promises, and Challenges 27

Eneda Hoxha and Raj Kishore

I. Introduction	28
II. Non-iPS-Cell-Based Therapies and Their Limitations	28
III. Therapeutic Cloning and Embryonic Stem Cells.....	30
IV. Induced Pluripotent Stem cells from Differentiated Somatic Cells	32
V. Cardiovascular Lineage Differentiation of iPS Cells.....	38
References	44

Reprogramming of Somatic Cells 51

Johnson Rajasingh

I. Introduction	51
II. Reprogramming of Somatic Cells into Pluripotent Stem Cells	52
III. Future Perspectives.....	72
References	73

Induction of Somatic Cell Reprogramming Using the MicroRNA miR-302 83

Karen Kelley and Shi-Lung Lin

I. Introduction.....	84
II. Mechanism of Reprogramming.....	86
III. Role of miR-302 in Early Embryogenesis.....	92
IV. Dual Role of miR-302: Reprogramming Effector and Tumor Suppressor.....	96
V. Balancing Stem Cell Tumorigenicity and Senescence.....	99
VI. Conclusion.....	102
References.....	103

From Ontogenesis to Regeneration: Learning how to Instruct Adult Cardiac Progenitor Cells 109

Isotta Chimenti, Elvira Forte, Francesco Angelini, Alessandro Giacomello, and Elisa Messina

I. Regeneration: From Urodeles and Teleosts to Mammals.....	110
II. To the "Heart" of the Problem.....	111
III. Lessons from Development.....	113
IV. Understanding the Stem Cell "Niche" and Its Roles.....	121
V. Recreating the Niche: The Importance of 3D Models.....	124
VI. Cardiac Cell Therapy: The Era of Clinical Trials.....	126
VII. Concluding Remarks.....	130
Acknowledgment.....	131
References.....	132

Roles of MicroRNAs and Myocardial Cell Differentiation 139

Tomohide Takaya, Hitoo Nishi, Takahiro Horie, Koh Ono, and Koji Hasegawa

I. Introduction.....	140
II. Myocardial Differentiation of ES Cells and miRNA.....	145
III. Somatic Cell Reprogramming and miRNA.....	147
IV. Heart Disease and MicroRNAs.....	148
V. Conclusion.....	150
References.....	150

Wnt Signaling and Cardiac Differentiation 153

Michael P. Flaherty, Timothy J. Kamenzell, and
Buddhadeb Dawn

I. Introduction	154
II. Wnt Signaling	154
III. Wnt Proteins and Cardiogenesis	158
IV. Concluding Remarks	168
Acknowledgments	169
References	169

Cross Talk Between the Notch Signaling and Noncoding RNA on the Fate of Stem Cells 175

Yaoliang Tang, Yingjie Wang, Lijuan Chen, Neal Weintraub,
and Yaohua Pan

I. Introduction	176
II. Direct Role of Notch Signaling in Stem Cell Maintenance and Differentiation	179
III. Cross Talk Between MicroRNA and Notch Signal on Stem Cell Fate	183
IV. Epigenetic Regulation of Stem Cell Fate via Notch Signaling	187
V. Conclusions	188
Acknowledgements	188
References	188

Myocardial Regeneration: The Role of Progenitor Cells Derived from Bone Marrow and Heart 195

Xiaohong Wang, Arthur H.L. From, and Jianyi Zhang

I. Introduction	196
II. Is There Cardiomyocyte Regeneration from Endogenous CPCs Post-MI?	196
III. Paracrine Effects of Transplanted Cells in the Injured Heart	201
IV. IGF + HGF Administration Can Activate <i>In Situ</i> CPCs to Generate Cardiomyocytes	201
V. Do Transplanted BM-Derived and/or Transplanted or <i>In Situ</i> CPCs Transdifferentiate into Cardiomyocytes and Vascular Cells?	202
VI. Do CDCs and/or MSCs Stimulate Endogenous CPCs to Regenerate Cardiomyocytes and Vascular Cells?	210
VII. Can Differentiated Cardiomyocytes Be Induced to Dedifferentiate and Reenter the Cell Cycle?	210

VIII. Conclusions and Future Perspectives	211
Acknowledgments	212
References	212

Role of GATA-4 in Differentiation and Survival of Bone Marrow Mesenchymal Stem Cells 217

Meifeng Xu, Ronald W. Millard, and Muhammad Ashraf

I. Introduction	218
II. Cytotherapy in Myocardial Infarction	218
III. Genetic Engineering of MSCs with Cytoprotective Factors	224
IV. Conclusions	233
References	235

Progenitor Cell Mobilization and Recruitment: SDF-1, CXCR4, α 4-integrin, and c-kit 243

Min Cheng and Gangjian Qin

I. Introduction	244
II. Progenitor Cell Mobilization	244
III. Progenitor Cell Recruitment and Retention	249
IV. Therapeutic Implications	251
V. Summary	253
Acknowledgment	253
References	254

Genetically Manipulated Progenitor/Stem Cells Restore Function to the Infarcted Heart Via the SDF-1 α /CXCR4 Signaling Pathway 265

Yigang Wang and Kristin Luther

I. Importance of SDF-1 α and CXCR4 Interaction in Ischemic Hearts	266
II. Role of SDF-1 α /CXCR4 as Therapeutic Targets in Heart Disease	267
III. SDF-1 α /CXCR4 as Therapeutic Targets in Vascular Diseases	271
IV. Role of SDF-1 α /CXCR4 in Cell-Based Therapy	272
V. Genetically Manipulated Cell Patch for Repair of Infarcted Myocardium	275
VI. Conclusions	279
Acknowledgments	280
References	281

Genetic Modification of Stem Cells for Cardiac, Diabetic, and Hemophilia Transplantation Therapies . . . 285

M. Ian Phillips and Yaoliang Tang

I. Introduction	286
II. Genetic Engineering	286
III. The Application of Genetic Modification of Stem Cells	294
References	300

Role of Heat Shock Proteins in Stem Cell Behavior 305

Guo-Chang Fan

I. Introduction	306
II. Hsps in the Modulation of SC Self-Renewal	307
III. Expression Profiles of Hsp in Differentiated SCs	308
IV. Roles of Hsps in Tissue Genesis	309
V. Protective Effects of Hsps in Transplanted SCs	313
VI. Roles of Hsps in SC Aging	315
VII. Conclusions	316
References	316

Preconditioning Approach in Stem Cell Therapy for the Treatment of Infarcted Heart. 323

Khawaja Husnain Haider and Muhammad Ashraf

I. Introduction	324
II. Stem Cell Therapy and the Heart	325
III. Stem Cell Survival: Major Determinant of Efficacy of Stem Cell Therapy	327
IV. Preconditioning: A Strategy to "Prime" the Cells for Improved Survival Under Stress	329
V. Conclusions	343
Acknowledgments	344
References	344
