

CONTENTS

Contributors	ix
--------------	----

Preface	xiii
---------	------

1. Whole Genome Sequencing of Fruit Tree Species 1

David Chagné

1. Introduction	2
2. Fruit Tree Genomes Sequenced to Date	4
3. Fruit Trees Gene Expansions and Genome Evolution	24
4. Applications of Whole Genome Sequence and Genome-Wide Genotyping Technologies for Breeding	27
5. The Future of Fruit Tree Genomics	31
Acknowledgements	32
References	32

2. Forest Tree Genomics: Review of Progress 39

Geneviève J. Parent, Elie Raherison, Juliana Sena and John J. MacKay

1. Introduction	40
2. Why Research Forest Tree Genomics?	41
3. Gene Discovery and Derived Genomic Resources	45
4. Genome Analysis and Evolution	49
5. Gene Expression and Transcriptome Profiling	55
6. Trait Variation of Forest Trees	68
7. Future Directions: Integrating Genetic Diversity and Genome Function	74
8. Conclusion	78
References	79

3. Acceleration of Forest and Fruit Tree Domestication by Genomic Selection 93

Fikret Isik, Satish Kumar, Pedro J. Martínez-García,
Hiroyoshi Iwata and Toshiya Yamamoto

1. Introduction	94
2. Current Status of Breeding and Selection in Major Forest Tree Species	96
3. Current Status of Breeding and Selection in Apple	104
4. Current Status of Breeding and Selection in Peach	109
5. Current Status of Breeding and Selection in Pear	113
References	117

4. Population and Conservation Genomics in Forest and Fruit Trees	125
Filippos A. Aravanopoulos, Ioannis Ganopoulos and Athanasios Tsaftaris	
1. Introduction	126
2. Population Genomics	128
3. Association Mapping	138
4. Comparative Genomics	142
5. Conservation Genomics	146
6. Future Perspectives	148
References	149
5. Genetics and Genomics of Tree Architecture	157
Evelyne Costes and Jean-Marc Gion	
1. Introduction	158
2. Highlighting the Genetic Control of Tree Architecture: From Plant Material to New Phenotyping Methods	159
3. Genetics and Genomics of Tree Growth and Architectural Traits: A Field in Fast Evolution	163
4. Methodological Improvements: From Low and Medium towards High-Throughput Phenotyping	169
5. Understanding the Biological Processes Underlying Tree Architecture	172
6. Perspectives: Integrating Architectural Traits in Breeding Programs and Assisting Ideotype Definition by Computer-Based Modelling	184
References	185
6. The Genetic Control of Bud-Break in Trees	201
Albert G. Abbott, Tatyana Zhebentyayeva, Abdelali Barakat and Zongrang Liu	
1. Introduction	202
2. Molecular Genetic Mapping of Flowering/Bud-Break	206
3. Genome-Wide Association Studies on Bud-Break Timing	208
4. The DAM Genes	209
5. Genome Sequences and Candidate Genes for Dormancy-Associated QTLs	210
6. Genomics and Bud-Break Candidate Gene Discovery	211
7. Epigenomics and Dormancy	213
8. Small RNA-mediated Posttranscriptional Expression Regulation and 'De novo' Methylation	214
9. Chromatin Remodelling and Control of Flowering	216

10. Forward Genetic/Transgenic Studies	218
11. Perspectives and Conclusions	219
References	220
7. Tree Responses to Environmental Cues	229
Ingo Ensminger, Christine Yao-Yun Chang and Katharina Bräutigam	
1. Introduction	230
2. Drought	232
3. Heat	236
4. Cold	239
5. Light	243
6. Interactions of Multiple Cues	247
7. Perspectives	250
References	254
8. Molecular Signatures of Adaptation and Selection in Forest Trees	265
Juan P. Jaramillo-Correa, Julien Prunier, Alejandra Vázquez-Lobo, Stephen R. Keller and Alejandra Moreno-Letelier	
1. Introduction	266
2. Quantitative Traits Variation	268
3. Linkage Mapping and QTL Detection	270
4. Association Mapping	273
5. Genome Scans	276
6. Surveying Sequence Variation at Candidate Genes	286
7. Functional Genetics of Tree Adaptation	290
8. Applications in Breeding and Tree Selection	292
9. Perspectives and Conclusions	295
Acknowledgements	296
References	297
<i>Subject Index</i>	307
<i>Author Index</i>	319
