Preface

xiii

1	Control Systems in the Living World	1
	The Nature of Living Systems	1
	Living Systems Have Clear-Cut Boundaries	2
	Metabolism	3
	Control Systems Are Prerequisites of Living Systems	3
	Biological Reproduction	4
	Evolvability	7
	Growth	7
	Homeostasis and Adaptability	8
	The Principle of Entropy and Erosion of Material Structures	8
	What Does It Take to Build Improbable Structures?	13
	Nature's Artworks	13
	Artificial Improbable Structures	14
	Biological Improbable Structures	16
	Homeostasis	16
	The Maintenance of Constant Internal Environment Is Prerequisite of Living Systems	16
	Control Systems	19
	The Control System in Unicellulars	22
	Cytoskeleton Induces DNA Replication	24
	Cytoskeleton Regulates Gene Expression	24
	Microtubules of Spindle Poles Regulate Chromosome Segregation	24
	Cytoskeleton Regulates the Directed Release of Golgi Units from Nurse Cells via Ring Canals	26
	Cytoskeleton Determines the Position of the Nucleus in the Cell	26
	Cytoskeleton Determines the Position of Organelles Within the Cell	26
	Cytoskeleton Controls the Formation of the Eyespot in Unicellulars	27
	Cytoskeleton Controls Locomotion in Unicellulars	28
	Cytoskeleton Controls Cytokinesis	30
	The Structure of the Cytoskeleton	32
	Microtubules	32
	Actin (Micro-) Filaments	34
	Intermediate Filaments	34
	Centrosomes as Microtubule-Organizing Centers	35
	Can the Cytoskeleton Compute?	36
	The Control System in Plants	41
	The Plant Bauplan and Control System	42

Hormones in the Plant Control System	44
Searching for the Plant Control System	46
Searching for the Controller of the Control System in Plants	47
References	51
2 Epigenetics of Reproduction in Animals	59
Newmann's Machines: Living Organisms Defy Human Imagination	59
Biological Information	62
The Spatial Arrangement of Cells Needs a New Kind of Information	62
Biological Information	64
Genetic Information	65
Epigenetic Information	68
DNA Methylation/Demethylation	72
Histone Modification and Chromatin Remodeling	74
Genetic Versus Epigenetic Information	86
Reproduction in Unicellulars	87
Reproduction in Single-Celled Prokaryotes	87
Asexual Reproduction	87
Binary Fission in Bacteria	88
Budding in Bacteria	88
Reproduction in Single-Celled Eukaryotes	89
Asexual Reproduction in Ciliates	89
Binary Fission in Paramecium	90
Sexual Reproduction in Paramecium—Conjugation	91
Reproduction in Fungi	91
Asexual Reproduction in Fungi	92
Reproduction by Budding in Yeasts	92
Reproduction Through Sporulation	93
Sexual Reproduction in Yeasts	93
Sexual Reproduction in Green Algae (<i>Chlorophyta</i>)	93
Asexual Reproduction in Green Algae	94
Sexual Reproduction	95
Asexual Reproduction in Metazoans	95
Reproduction by Fragmentation	95
Sexual Reproduction in Sponges	95
Reproduction in Eumetazoans	96
Asexual Reproduction in Eumetazoans	96
Reproduction by Fragmentation	96
Reproduction by Budding	97
Sexual Reproduction—the Prevalent Mode of Reproduction of Multicellulars	97
Production of Egg Cells—Oogenesis	99
Hermaphroditism in Metazoans	101
Sex Evolution and Sex Determination in Eumetazoans	102
Epigenetic Determination of the Primary Sex in Vertebrates	104

Epigenetic Determination of Secondary Sex in Fish	104
Epigenetic Determination of Sex in Reptiles	105
A Single Genetic Toolkit, but Breathtaking Diversity of Forms	105
A User of the Genetic Toolkit	106
Epigenetic Programming of Gene Expression in the Egg	110
Deposition of Maternal Determinants in the Egg	110
Regulation of the Length of Microtubules—Key to Transport of Maternal Determinants in the Oocyte	111
The Nervous System Regulates "At Will" the Length of Microtubules	112
References	113
3 Epigenetic Control of Animal Development	121
Fertilization—Fusion of the Egg and Sperm Cell	121
Egg Activation	122
Genomic Restoration in the Zygote	124
Epigenetic Regulation of Cell Differentiation	127
Epigenetic Modes of Cell Differentiation	128
Epigenetic Determination of Early Development—The Embryonic Genome Is Still Dormant	131
Epigenetic Determination of Cleavage Divisions	131
Epigenetic Control of Early Development	133
The Mid-Blastula or Maternal-Embryonic Transition	134
Gastrulation—Formation of Embryonic Layers	136
Embryonic Induction	137
Formation of Embryonic Germ Layers	138
Formation of Endoderm	139
Formation of Mesoderm	139
Formation of the Neural Tube	140
Neural Induction	140
The Primary Neurulation	141
The Phylotypic Stage	144
Formation of the Neural Crest	145
Epigenetic Control of Postphylotypic Development in Animals	149
Parental Epigenetic Information Is Exhausted at the Phylotypic Stage—Where Does the Information for Further Development Come from?	149
Apoptosis in Invertebrates	150
Left-Right Asymmetry	151
Myogenesis in Invertebrates	153
Myogenesis in Vertebrates	155
Development of the Heart	157
Vasculogenesis and Angiogenesis	159
Formation of the Gastrointestinal Tract	161
Pneumogenesis	163
Nephrogenesis	165

Neural Control of Primary Sex Determination	166
Osteogenesis—Formation of Skeletal Bones	168
Neural Control of Bone Remodeling	170
How Animals Know When to Stop Growing—The Body Size Set Point	172
How Long Animals Live—An Epigenetic Decision	174
Metamorphosis: The Same Organism Produces Two Radically Different Body Plans	176
References	180
4 Living and Adapting to Its Own Habitat	193
Adaptation—Surviving in a Changing Environment	193
Neural Control of Gene Expression	197
Making Environmental Signals Intelligible to Genes	199
Restricting Gene Expression to Relevant Cells Alone: Binary Neural Control of Gene Expression	202
The Source of Information for Selecting Sites of Histone Modification	204
From Where Does the Epigenetic Information for DNA Methylation Come?	208
Clocks and Calendars for Timing Phenotypic Changes	211
Discrete Phenotypic Changes Are Designed by the Brain	218
Diapause—the Predictive Form of Insect Larval Dormancy	218
Parents Transmit Epigenetic Instructions for Switching Their Offspring to Alternative Life Histories	219
A Quick Change of the Phenotype—Phase Transition in Locusts	221
Transgenerational Developmental Plasticity—Insights into the Nature of Evolutionary Morphological Change	224
Where Is the Epigenetic Information for TDPs Generated?	228
Epigenetics of Behavior and Social Attachment in Animals	230
References	233
5 Rise of the Animal Kingdom and Epigenetic Mechanisms of Evolution	239
The Prelude to the Cambrian Burst of Animal Diversity	239
Cambrian Explosion	240
Is the Cambrian Explosion a Fact or a Paleontological Artifact?	241
The Cambrian Explosion Conundrum	242
Presumed External Factors Involved in the Cambrian Explosion	244
Ecological Factors	244
Glaciation	244
Oxygenation of Oceans and Earth Atmosphere	245
Current Hypotheses of Organic Evolution	245
The Modern Synthesis—The neoDarwinian Hypothesis of Evolution	246
Other Hypotheses on Evolution	249
Updating the Explanations of the neoDarwinian Paradigm	249
The “Regulatory” Hypothesis of Morphological Evolution	249
The GRN Hypothesis of Evolution	250

The Hypothesis of Punctuated Equilibria—Challenging the neoDarwinian Hypothesis “from Within”	251
The Hypothesis of Facilitated Variation	252
The Developmental Plasticity Hypothesis	254
The Genetic Assimilation Hypothesis	255
The Hypothesis of the Genotype Network	256
The Hypothesis of Epigenetic Variation	257
The Hypothesis of Generic Factors	258
The Control System Hypothesis of Evolution	259
The Control System in Animals	259
The Evolution of the Integrated Control System in Metazoans	263
An Obscure Control System in Sponges	263
Rise of the Eumetazoan Control System: Evolution of the Synapse, Neuron, and the Diffuse Neural Net in Cnidarians	266
Evolution of the Integrated Control System and the Cambrian Explosion	267
Other Insights into the Possible Role of the Centralized Nervous System in the Cambrian Diversification	271
Centralization of the Nervous System and Evolution of the Animal	
Complexity in Bilaterians	272
Acoela (Acoelomates)	273
Evolution of the “True” Brain	274
Annelids	274
Arthropods	276
Vertebrates	277
On the Generation of Epigenetic Information in the CNS	279
The Antientropic Demon and the Advent of Cambrian Biota—Fine-Tuning Gene Expression	282
The Biological Demon 1—Precise Spatial Restriction of Gene Expression	283
The Biological Demon 2—Selective Recruitment of Genes	288
References	291
