|---------------------------------------------------------------------------------------------------------|-----------|
| <b>1. New Insights into Mechanisms of Stem Cell Daughter Fate Determination in Regenerative Tissues</b> | <b>1</b>  |
| Aiko Sada and Tudorita Tumber                                                                           |           |
| 1. Introduction                                                                                         | 2         |
| 2. Stem Cells in Invertebrate Model Systems                                                             | 9         |
| 3. Characteristics of Mammalian Stem Cells                                                              | 14        |
| 4. Cancer Cell Dynamics with the Stochastic Cell-State Transition Model                                 | 37        |
| 5. Self-Renewal and Differentiation of Stem Cells in Culture                                            | 38        |
| 6. Concluding Remarks                                                                                   | 40        |
| Acknowledgments                                                                                         | 42        |
| References                                                                                              | 42        |
| <b>2. Insights into Skeletal Muscle Development and Applications in Regenerative Medicine</b>           | <b>51</b> |
| T. Tran, R. Anderson, S. P. Sherman, and A. D. Pyle                                                     |           |
| 1. Introduction                                                                                         | 52        |
| 2. Developmental Myogenesis                                                                             | 53        |
| 3. Muscle Stem Cell Lineages                                                                            | 54        |
| 4. Transcriptional and Posttranscriptional Regulation of Myogenesis                                     | 58        |
| 5. Differentiation of Pluripotent Stem Cells Toward Skeletal Muscle                                     | 61        |
| 6. Regenerative Myogenesis in Adult Muscle                                                              | 67        |
| 7. Modeling Muscular Dystrophy and Potential Therapeutic Approaches                                     | 71        |
| 8. Conclusions                                                                                          | 74        |
| References                                                                                              | 75        |
| <b>3. Cellular and Molecular Biology of Neuronal Dystonin</b>                                           | <b>85</b> |
| Andrew Ferrier, Justin G. Boyer, and Rashmi Kothary                                                     |           |
| 1. Introduction to the Cytoskeleton and Cytoskeletal Linking Proteins                                   | 86        |
| 2. Dystonin Gene Organization and Isoform Diversity                                                     | 88        |
| 3. Structural and Molecular Properties of Dystonin                                                      | 92        |
| 4. Expression and Subcellular Localization                                                              | 97        |
| 5. Dystonin Deficiency in Murine and Cell Culture Models                                                | 105       |
| 6. Dystonin and Human Disease                                                                           | 112       |

|                                                                                            |            |
|--------------------------------------------------------------------------------------------|------------|
| 7. Conclusion and Future Directions                                                        | 113        |
| Acknowledgments                                                                            | 114        |
| References                                                                                 | 114        |
| <b>4. Kinase-Kinase Interaction and Modulation of Tau Phosphorylation</b>                  | <b>121</b> |
| Mitsuko Hashiguchi and Toshio Hashiguchi                                                   |            |
| 1. Introduction                                                                            | 122        |
| 2. Multisite Phosphorylation of Tau                                                        | 125        |
| 3. Proteins of TPPC                                                                        | 131        |
| 4. Modulation of Tau Phosphorylation by a Topographical Mechanism                          | 142        |
| 5. Synergism and Antagonism between Tau Kinases                                            | 144        |
| 6. Modulation of Tau Phosphorylation by A Temporal Mechanism                               | 146        |
| 7. Implications of Modulatory Tau Phosphorylation                                          | 149        |
| 8. Concluding Remarks                                                                      | 152        |
| References                                                                                 | 152        |
| <b>5. New Insights into the Role of the Small Ubiquitin-like Modifier (SUMO) in Plants</b> | <b>161</b> |
| Hee Jin Park and Dae-Jin Yun                                                               |            |
| 1. Introduction                                                                            | 162        |
| 2. Sumoylation in Non-Plant Eukaryotes                                                     | 163        |
| 3. Plant SUMOs                                                                             | 167        |
| 4. SUMO Cycle                                                                              | 168        |
| 5. SUMO Functions in Plants                                                                | 177        |
| 6. Searching for SUMO Targets                                                              | 192        |
| 7. Crosstalk between Sumoylation and Other Posttranslational Modifications                 | 196        |
| 8. Perspectives                                                                            | 199        |
| Acknowledgments                                                                            | 199        |
| References                                                                                 | 199        |
| <b>6. Role of Melatonin and Its Receptors in the Vertebrate Retina</b>                     | <b>211</b> |
| Allan F. Wichmann and David M. Sherry                                                      |            |
| 1. Introduction                                                                            | 212        |
| 2. Phylogenic Relationship between Retina and Pineal Gland                                 | 213        |
| 3. Melatonin Biosynthesis in Retina                                                        | 214        |
| 4. Melatonin Receptor Structure and Function                                               | 215        |
| 5. Cell Types and Organization of Visual Circuits in Retina                                | 218        |
| 6. Expression of Melatonin Receptors in Retina                                             | 223        |

|                                                                      |            |
|----------------------------------------------------------------------|------------|
| 7. Physiological Actions of Melatonin in Retina                      | 226        |
| 8. Concluding Remarks                                                | 235        |
| References                                                           | 235        |
| <b>7. Photoinhibition of Photosystem II</b>                          | <b>243</b> |
| Esa Tyystjärvi                                                       |            |
| 1. Introduction                                                      | 244        |
