Volumes in Series	xvii

Section I

H₂O₂ Metabolism: Determination of a Cellular Steady-State

1. The Cellular Steady-State of H₂O₂: Latency Concepts and Gradients	3
H. Susana Marinho, Luísa Cyrne, Enrique Cadenas, and Fernando Antunes	
1. Introduction	4
2. Experimental Components and Considerations When Measuring the H ₂ O ₂ Gradient in <i>S. cerevisiae</i> Cells	9
3. Experimental Components and Considerations When Measuring the H ₂ O ₂ Gradient in Mammalian Cell Lines	12
4. Data Handling/Processing	16
5. Summary	17
Acknowledgments	18
References	18
2. Evaluating Peroxiredoxin Sensitivity Toward Inactivation by Peroxide Substrates	21
Kimberly J. Nelson, Derek Parsonage, P. Andrew Karplus, and Leslie B. Poole	
1. Introduction	22
2. Materials	26
3. Measuring Inactivation Sensitivity by Steady-State NADPH-Linked Assays	27
4. Measuring Inactivation Sensitivity by Multiturnover Cycling with ROOH and DTT Followed by Mass Spectrometry Analysis	34
5. Measuring Inactivation Sensitivity of Prx1/AhpC Prxs Under Single Turnover Conditions Followed by Gel Electrophoresis	35
6. Conclusions/Summary	38
Acknowledgment	39
References	39

3. Peroxiredoxins as Preferential Targets in H₂O₂-Induced Signaling	41
Lía M. Randall, Gerardo Ferrer-Sueta, and Ana Denicola	
1. Introduction	42
2. Reaction of H ₂ O ₂ with Cellular Thiols	43
3. H ₂ O ₂ Diffusion Versus Reaction with Cellular Thiols	47
4. Sulfenic Acids as Signal Transduction Intermediates	49
5. Prxs as Preferential Targets for H ₂ O ₂	51
6. Prxs as Primary H ₂ O ₂ Sensors and Transducers	52
7. Prx-Protein Interactions are Needed to Transmit the Signal	52
8. Posttranslational Regulation of Prxs	55
9. Summary	57
Acknowledgments	58
References	58
4. Selenium in the Redox Regulation of the Nrf2 and the Wnt Pathway	65
Regina Brigelius-Flohé and Anna Patricia Kipp	
1. Some Historical Background for Introduction	66
2. Selenium Status and Selenoprotein Synthesis	68
3. Selenium Status and the Keap1/Nrf2 System	69
4. Selenium and the Wnt Pathway	72
5. Common Players and Events in Nrf2 and Wnt Signaling	75
6. How Does Selenium Come into Play?	78
References	80
5. Selenoprotein W as Biomarker for the Efficacy of Selenium Compounds to Act as Source for Selenoprotein Biosynthesis	87
Anna Patricia Kipp, Janna Frombach, Stefanie Deubel, and Regina Brigelius-Flohé	
1. Introduction	88
2. Experimental	90
3. Results	94
4. Discussion	102
5. Conclusions	108
Acknowledgments	109
References	109

6. Peroxiredoxins and Sulfiredoxin at the Crossroads of the NO and H₂O₂ Signaling Pathways	113
Kahina Abbas, Sylvie Riquier, and Jean-Claude Drapier	
1. Introduction	114
2. The Effect of NO on the Level of 2-Cys-Prx Overoxidation	116
3. Detection of Srx	122
4. Comments	123
Acknowledgments	125
References	125
7. Glutathione and γ-Glutamylcysteine in Hydrogen Peroxide Detoxification	129
Ruben Quintana-Cabrera and Juan P. Bolaños	
1. Introduction	130
2. Materials	131
3. Previous Considerations	132
4. Procedure with Purified Enzymes and Substrates	133
5. Analysis in Biological Samples	137
6. Further Applications: H ₂ O ₂ Produced by NOS	140
7. Conclusions	140
Acknowledgments	141
References	141
8. Peroxiredoxin-6 and NADPH Oxidase Activity	145
Daniel R. Ambruso	
1. Introduction	146
2. Experimental Components and Considerations	149
3. Peroxiredoxin Activity of Prdx6	155
4. Effect of Prdx6 on NADPH Oxidase Activity	157
5. Summary	163
References	165
9. Study of the Signaling Function of Sulfiredoxin and Peroxiredoxin III in Isolated Adrenal Gland: Unsuitability of Clonal and Primary Adrenocortical Cells	169
In Sup Kil, Soo Han Bae, and Sue Goo Rhee	
1. Introduction	170
2. Hyperoxidation of PrxIII by H ₂ O ₂ Generated During Corticosterone Synthesis	171

3. Induction of Srx by ACTH	173
4. Unsuitability of Clonal and Primary Adrenocortical Cells for Studies of the Srx-PrxIII Regulatory Pathway	174
5. Adrenal Gland Organ Culture as an <i>In Vitro</i> Model for the Srx-PrxIII Regulatory Pathway	176
6. Concluding Remarks	179
Acknowledgment	179
References	179

Section II

H₂O₂ in the Regulation of Cellular Processes in Plants

10. The Use of HyPer to Examine Spatial and Temporal Changes in H₂O₂ in High Light-Exposed Plants	185
Marino Exposito-Rodriguez, Pierre Philippe Laissue, George R. Littlejohn, Nicholas Smirnov, and Philip M. Mullineaux	
1. Introduction	186
2. Experimental Procedures	191
3. Pilot Experiments Using HL Stress	196
4. Conclusions	198
Acknowledgments	198
References	198
11. A Simple and Powerful Approach for Isolation of <i>Arabidopsis</i> Mutants with Increased Tolerance to H₂O₂-Induced Cell Death	203
Tsanko Gechev, Nikolay Mehterov, Iliya Denev, and Jacques Hille	
1. Introduction	204
2. Generation and Isolation of Mutants More Tolerant to H ₂ O ₂ -Induced Oxidative Stress	206
3. Identification of Mutations in the Genome	209
4. Analysis of the Mutants with Enhanced Tolerance to H ₂ O ₂ -Induced Oxidative Stress	211
5. Conclusion	217
Acknowledgments	218
References	218

12. Analysis of Environmental Stress in Plants with the Aid of Marker Genes for H₂O₂ Responses	221
Ayaka Hieno, Hushna Ara Naznin, Katsunobu Sawaki, Hiroyuki Koyama, Yusaku Sakai, Haruka Ishino, Mitsuro Hyakumachi, and Yoshiharu Y. Yamamoto	
1. Introduction	222
2. Experimental Materials and Procedures	224
3. Example of Analysis	231
Appendix: Recipes of Stock Solutions, Buffers, and Media	235
References	236
13. The Role of Plant Bax Inhibitor-1 in Suppressing H₂O₂-Induced Cell Death	239
Toshiki Ishikawa, Hirofumi Uchimiya, and Maki Kawai-Yamada	
1. Introduction	240
2. Morphological Changes of Mitochondria Under ROS Stress	242
3. Assay for Inhibitory Effect of BI-1 on ROS Stress-Induced Cell Death Using Heterologous Expression System in Suspension Cultured Cells	246
4. Summary	253
References	253
14. Comparative Analysis of Cyanobacterial and Plant Peroxiredoxins and Their Electron Donors: Peroxidase Activity and Susceptibility to Overoxidation	257
Marika Lindahl and Francisco Javier Cejudo	
1. Introduction	258
2. Expression and Purification of Recombinant Prxs and Thioredoxins	259
3. Prx Activity Assays <i>In Vitro</i>	260
4. Peroxide Decomposition in Cyanobacteria <i>In Vivo</i>	264
5. Overoxidation of Plant and Cyanobacterial 2-Cys Prx	267
6. Concluding Remarks	272
References	272

15. Using Hyper as a Molecular Probe to Visualize Hydrogen Peroxide in Living Plant Cells: A Method with Virtually Unlimited Potential in Plant Biology	275
Alejandra Hernández-Barrera, Carmen Quinto, Eric A. Johnson, Hen-Ming Wu, Alice Y. Cheung, and Luis Cárdenas	
1. Introduction	276
2. NADPH Oxidase in Plant Cells	277
3. Plant Cells Respond to External and Internal Stimuli	279
4. Visualizing Hydrogen Peroxide in Living Plant Cells	280
5. Hyper as a New Genetically Encoded Probe	281
6. Vector Description and Plant Transformation	282
7. Preparation and Sterilization of Modified Petri Dishes for Growing <i>Arabidopsis</i> Plants for Microscopy Analysis	284
8. Seeds Sterilization and Stratification	284
9. Growth Conditions	285
10. Image Acquisition and Processing	286
Acknowledgments	288
References	288
