vii

1. Sensing and Adapting to Anaerobic Conditions

by *Staphylococcus aureus*

1

Jeffrey W. Hall and Yinduo Ji

1. Introduction	2
2. Oxygen-Independent Regulation	5
3. Oxygen-Dependent Regulators	12
4. Conclusion	20
Acknowledgments	21
References	21

2. The Clinical Importance of Fungal Biofilms

27

Gordon Ramage and Craig Williams

1. Introduction	28
2. Clinical Relevance	29
3. Clinical Management	41
4. Learning from Resistance Mechanisms	52
5. Concluding Remarks	62
References	63

3. The Natural History of Yeast Prions

85

Mick F. Tuite

1. Introduction	86
2. The History of Prions	87
3. The Underlying Principles of Prion Formation and Propagation in Animals and Fungi	88
4. Prions in <i>S. cerevisiae</i>	92
5. Prion-Dependent Phenotypic Variation	107
6. Fungal Prions in the "Natural World"	111
7. Fungal Prions: Friend or Foe?	117
Acknowledgments	126
References	126

4. Carbon-Rich Wastes as Feedstocks for Biodegradable Polymer (Polyhydroxyalkanoate) Production Using Bacteria **139**

Jasmina Nikodinovic-Runic, Maciej Guzik, Shane T. Kenny, Ramesh Babu, Alan Werker, and Kevin E. O Connor

1. Introduction	141
2. Food Waste	142
3. Polyhydroxyalkanoate from Food Waste and Food Production By-Products	144
4. PHA from Mixed Food Waste and Food Processing Residues	146
5. PHA from Whey	147
6. PHA from Waste Lipids	149
7. PHA from Sugar Industry	154
8. PHA from Agricultural Crop Residues	159
9. Petrochemical Plastic Waste	163
10. From Petrochemical Plastic Waste to PHA	163
11. Syngas as a Substrate for PHA Production	168
12. Waste Glycerol from Industrial Processes	168
13. Microbial Metabolism of Glycerol	170
14. PHA Production from Glycerol Waste	170
15. Forest Residuals as a Potential Source for PHA Production	172
16. Other Woody Residuals as a Potential Source for PHA Production	178
17. Discussion, Conclusion, and Outlook	181
References	188
Index	201
Contents of Previous Volumes	209
