<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>

Section A

Neural Crest Cells

1. Neural Crest Cell Evolution: How and When Did a Neural Crest Cell Become a Neural Crest Cell	3
William A. Muñoz and Paul A. Trainor	
1. Introduction	4
2. Defining Neural Crest Cells	5
3. Chordate Evolution and Vertebrate Origins	8
4. Neural Crest Cell Origin	9
5. Neural Crest Cell Evolution in Vertebrates	11
6. Cranial Neural Crest Cell Gene Regulatory Network	13
7. Evolution of Neural Crest Cell Gene Regulatory Networks	15
8. Conclusions and Perspectives	18
Acknowledgments	20
References	20
 2. Resolving Time and Space Constraints During Neural Crest Formation and Delamination	 27
Jean-Loup Duband, Alwyn Dady, and Vincent Fleury	
1. Integrating Space During NCC Induction and Specification: Roles of Cell Movements and Cadherin-Mediated Cell Sorting	29
2. Coordinating NCC Delamination Timely and Spatially: Regulation of Cadherin Activity	34
3. Coordinating NCC Specification and Delamination: Spatiotemporal Control of the Core EMT Regulatory Factors	41
4. Spatial Control of the Activity of the Zeb-2 Transcription Factor	59
5. Future Prospects	60
Acknowledgments	61
References	61

3. Extended Multipotency of Neural Crest Cells and Neural Crest-Derived Cells	69
Tsutomu Motohashi and Takahiro Kunisada	
1. Introduction	70
2. Postmigratory NCSC: Multipotent Cells are Maintained in the Tissues	72
3. Cultured NCSC-Like Cells Originating from the Hair Follicle and Dermis	76
4. Retention of Multipotency in Differentiated NCC-Derived Cells	78
5. Maintained Multipotency in Postmigrating NCC and NCC Derivatives	82
6. Remarks on the Origin of Melanomas	86
7. Concluding Remarks	88
Acknowledgments	89
References	89
4. The Ciliary Baton: Orchestrating Neural Crest Cell Development	97
Ching-Fang Chang, Elizabeth N. Schock, Aria C. Attia, Rolf W. Stottmann, and Samantha A. Brugmann	
1. Introduction	98
2. The Primary Cilium: Defining the Organelle	98
3. The Role of Primary Cilia during NCC Ontogeny	103
4. Craniofacial Phenotypes in Animal Models and Human Patients Support a Role for Primary Cilia in NCC Development	108
5. Beyond the Face: Trunk NCCs are Also Affected by the Loss of Primary Cilia	115
6. NCCs Utilize Primary Cilia for Tissue-Tissue Interactions	116
7. The Role for Primary Cilia in Molecular Signal Transduction	119
8. Conclusions	124
References	125
5. Receptor Tyrosine Kinase Signaling: Regulating Neural Crest Development One Phosphate at a Time	135
Katherine A. Fantauzzo and Philippe Soriano	
1. Introduction	136
2. RTK Signaling in Mammalian NCC Development	142
3. Current Methods to Investigate RTK Signaling	160
4. Concluding Remarks	166
Acknowledgments	166
References	167

6. Neural Crest Cells in Cardiovascular Development	183
Alice Plein, Alessandro Fantin, and Christiana Ruhrberg	
1. Introduction	183
2. Cardiac NCCs Enable Pharyngeal Arch Artery Remodeling	184
3. Cardiac NCCs are Essential for Cardiac OFT Septation	187
4. Signaling Pathways in Cardiac NCC-Mediated Vascular Remodeling	188
5. Cardiac NCCs Contribution to the Cardiac Valves	191
6. Possible Roles for Cardiac NCCs in Myocardial Development	192
7. Possible Roles for Cardiac NCCs in the Development of the Cardiac Conduction Systems	193
8. Congenital Abnormalities Caused by Defective Cardiac NCC Development	193
9. Outstanding Questions	195
References	196
 7. Molecular Control of the Neural Crest and Peripheral Nervous System Development	 201
Jason M. Newbern	
1. Introduction	202
2. Neural Crest Specification	202
3. Migratory Patterns of Trunk Neural Crest	204
4. Molecular Regulators of Neural Crest Migration	207
5. Boundary Cap	209
6. Sensory Neurogenesis in the DRG	210
7. Neurotrophic Factors in Sensory Neuron Development	212
8. Gliogenesis in the PNS	213
9. Trophic Signaling Mechanisms During PNS Development	215
10. Conclusions	217
Acknowledgment	218
References	218

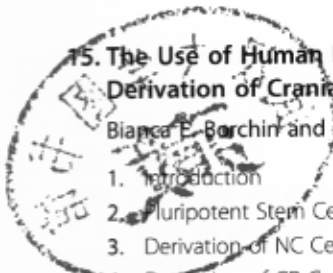

Section B

Placodes

8. Vertebrate Cranial Placodes as Evolutionary Innovations— The Ancestor's Tale	235
Gerhard Schlosser	
1. Introduction	236
2. A Brief Primer on Metazoan Phylogeny	239
3. Vertebrates	240

4. The Tunicate-Vertebrate Clade	251
5. Chordates	260
6. Deuterostomes	265
7. Bilateria	268
8. Eumetazoa and Metazoa	272
9. Summary and Conclusions	276
References	278
9. Transcriptional Regulation of Cranial Sensory Placode Development	301
Sally A. Moody and Anthony-Samuel LaMantia	
1. Introduction	302
2. Induction and Specification of the Preplacodal Field	304
3. Breaking the PPE into Individual Placodes with Different Developmental Fates	319
4. Regulation of Cellular Differentiation	321
5. NB Zone, PPE, and Placode Genes Involved in Human Congenital Syndromes	330
6. Conclusions	335
Acknowledgments	336
References	336
10. Neural Crest and Placode Contributions to Olfactory Development	351
Jun Suzuki and Noriko Osumi	
1. Introduction	352
2. The OP Formation	355
3. The OE Development	356
4. The Adult OE Maintenance	357
5. The Multipotent Stem Cells in the LP	359
6. Contribution of NCDCs in the OM	359
7. The Limitation of Current Techniques and Future Perspectives	367
Conflict of Interests	368
Acknowledgments	368
References	368
11. Epithelial Morphogenesis: The Mouse Eye as a Model System	375
Bharesh Chauhan, Timothy Plageman, Ming Lou, and Richard Lang	
1. Introduction	376
2. Eye Morphogenesis	376

3. Dynamic Changes in the Actin Cytoskeleton Drive Morphogenesis	378
4. Shaping of the Optic Cup	389
5. Conclusions	392
Acknowledgments	392
References	392
12. Developing and Regenerating a Sense of Taste	401
Linda A. Barlow and Ophir D. Klein	
1. How Are Taste Buds Patterned?	403
2. Regulation of Taste Cell Fate	406
3. How Can We Link Embryonic Development and Adult Taste Cell Renewal?	409
4. Is There a Specialized Taste Bud Stem Cell Population, or Are Extrinsic Signals Responsible for Defining which Cell Lineages Are Generated, and When?	410
5. Is Molecular Regulation of Taste Cell Renewal Analogous to That of Taste Bud Development?	411
Acknowledgments	414
References	414
13. Signaling in Tooth, Hair, and Mammary Placodes	421
Youngwook Ahn	
1. Introduction	422
2. Early Patterning and Morphogenesis of Skin Appendages	422
3. Perspectives	447
Acknowledgments	448
References	448
14. The Role of Foxi Family Transcription Factors in the Development of the Ear and Jaw	461
Renée K. Edlund, Onur Birol, and Andrew K. Groves	
1. The Anatomy and Embryonic Origins of the Inner, Middle, and Outer Ears	462
2. Forkhead Proteins as Transcription Factors and Pioneer Factors	474
3. The Role of Foxi Family Members in Inner Ear Development	476
4. The Role of Foxi Family Members in Middle Ear, Outer Ear, and Jaw Development	481
5. Conclusions	484
References	486

15. The Use of Human Pluripotent Stem Cells for the *In Vitro* Derivation of Cranial Placodes and Neural Crest Cells

497

Bianca E. Borchini and Tiziano Barberi

1. Introduction 498
2. Pluripotent Stem Cells 499
3. Derivation of NC Cells from hESC/hIPSC 499
4. Derivation of CP Cells from hESC/hIPSC 508
5. Conclusions 510
- References 511
