Introduction	xix
Part I: Epigenetic Basis of Metazoan Heredity	1
1 Control Systems and Determination of Phenotypic Traits in Metazoans	3
The Thermodynamic Enigma of Living Systems	3
On the Meaning of Biological Information	4
Genetic Versus Epigenetic Information	4
Novel Properties of the Biological Information	5
The Control System in Metazoans and the von Neumann's Machine	6
Central Control of Animal Physiology	9
Neural Control of Water Content	9
Neural Control of Glucose and Insulin Biosynthesis	10
Neural Control of Thermoregulation	12
Central Control of Animal Behavior	16
Neural Control of Locomotion	17
Neural Determination of Monogamy in Prairie Voles	17
Central Control of Metazoan Morphology	18
Control of Expression of Nonhousekeeping Genes	20
Chromatin Remodeling in Control of Gene Expression	21
Extracellular Control of Signal Transduction Pathways and Transcription Factors	22
Hormonal Control of Secreted Proteins and Growth Factors	23
Neural Control of the Endocrine Function	24
Examples of Central Control of Metazoan Morphology	27
Development of the Mammary Gland	27
Central Determination of Body Mass	28
Central Determination of Normal Obesity	29
The Integrated Control System	31
The Hypothesis of the Epigenetic System of Heredity and its Predictions	32
2 Neural Manipulation of Gene Expression	39
Predetermined Versus Manipulative Expression of Genes	39
Processing of External/Internal Stimuli in the CNS Generates Information for Adaptive Phenotypic Responses	41
Molecular Mechanisms of Manipulative Expression of Genes in the CNS	49

Epigenetic Manipulation of Genetic Information in the CNS	51
Selective Elimination of Genetic Information in the CNS	56
Neural Circuits Generate Epigenetic Information	57
Neural Processing of Stimuli Generates Information for Postphylogenic Development	61
Processing-Dependent Expression of Genes and the Blood-Brain Barrier	66
Generation of Information for Adaptive Camouflage in <i>Xenopus</i>	66
What Do Neural Circuits Do: Sum Up Stimuli or Figure Out Adaptive Responses?	69
3 Epigenetic Control of Reproduction	81
Epigenetic Control of Reproductive Physiology and Behavior	81
Neuroendocrine Regulation of the Gonadal Function in Insects	81
Local Neural Control of the Reproductive Function in Insects	84
Neuroendocrine Regulation of Reproductive Function in Vertebrates	84
Local Neural Control of the Reproductive Function in Vertebrates	88
Epigenetic Control of Gametogenesis	89
Neural Control of Oogenesis in Insects and Gastropod Molluscs	89
Neural Control of Oogenesis in Vertebrates	93
Neural Control of Spermato-/Spermiogenesis	94
Neural Control of Deposition of Parental Epigenetic Information in Gametes	96
Neural Control of Deposition of Maternal Factors in Insect Oocytes	97
Neural Control of the Squeezing of Nurse Cell Content into the Oocyte	98
Other Modes of Neural Control of Deposition of Parental Epigenetic Information in Vertebrate Eggs	106
Role of the Ovarian Innervation in the Ovarian Function	110
Paternal Cytoplasmic Factors in the Sperm Cell	111
Neural Control of Gene Imprinting	112
4 Epigenetic Control of Early Development	127
Epigenetic Control of Formation of Primordial Germ Cells and Formation of Zygote	127
Epigenetic Control of Migration of PGCs	128
Epigenetic Control of Early Development in Insects	129
Epigenetic Control of Early Development in Vertebrates	130
Epigenetic Control of Early Development in Mammals	132
Epigenetic Control of Formation of Embryonic Germ Layers	136
Maternal Control of Endoderm Formation	136
Maternal Control of Mesoderm Formation	137
Epigenetic Control of Neural Induction and Formation of the CNS	137
5 Neural Control of Postphylogenic Development	147
Neural Control of Metamorphosis	148
Apoptosis in Invertebrates	148

Neural Control of Metamorphosis in Vertebrates	153
Neural Control of Metamorphosis in Amphibians	153
Postphylotypic Development in Vertebrates	154
The Embryonic CNS Controls the Postphylotypic Development in Vertebrates—Empirical Evidence	154
Development of the Dermomyotome and Sclerotome	156
Neural Control of the Primary Sex Determination	184
Neural Control of Sex Conversion	186
Osteogenesis	187
Neural Control of the Development of the Mammary Gland	193
Neural Control of the Development of Body Mass	194
Neural Control of the Life Span	198
Neural Control of the Onset of Puberty	198
Neural Control of Apoptosis	201
Neural Control of Regeneration	204
6 The Epigenetic System of Inheritance—An Outline	229
The Epigenetic System of Inheritance	229
Gametogenesis and Provision of Maternal Epigenetic Information to Oocytes	232
Biphasic CNS Control of Reproduction	238
The Parental CNS-Controlled Phase of Reproduction: Formation of Bauplan and the CNS	238
The Embryonic CNS-Controlled Phase: The Postphylotypic Development	241
The Binary Neural Control of Gene Expression	243
Novel Features of the Epigenetic System of Inheritance	247
Part II: Neural-Developmental Premises of Evolutionary Adaptation	255
7 Evolution and Stress Responses to Changes in Environment	257
Evolution of Animal Kingdom Is Related to Changes in Environment	257
Neuroendocrine System	259
Stress and Stressors in Vertebrates	262
Neuroendocrine Response to Stress	263
Environmental Stress as a Cue for Adaptive Developmental Plasticity	267
Environmental Stress Induces Evolutionary Changes Without Changes in Genes	268
8 Behavioral Adaptation to Changed Conditions of Living	275
Adaptation to Changed Conditions of Living	275
Neural Basis of Animal Behavior	275
Neural Basis of Learned Behavior	282
Animal Behavior Is Not Determined by Genes	286
Learned Behaviors Evolve into Innate Behaviors	290

Behavioral Atavisms—Activation of Ancestral Behavioral Circuitries	294
Developmental and Evolutionary Relationship Between Behavior and Morphology	297
9 Ontogeny: The Workshop of Evolutionary Change	307
Ontogeny and the Phylotypic Stage—Why Do All	
Developmental Pathways Converge to the Common Bauplan?	309
Ontogeny May Change Without Changes in Genes	312
Generation of Epigenetic Information for Organogenesis	
After the Phylotypic Stage	315
Stress-Induced Developmental Instability and Evolution	319
Developmental Constraints and Adaptive Evolutionary Innovations	321
10 Intragenerational Developmental Plasticity	327
Developmental Plasticity: Beyond the Reaction Norm	327
Developmental Plasticity and Possible Evolutionary Implications	331
Adaptive Intragenerational Developmental Plasticity	332
Camouflage (Adaptive Coloration, Cryptic Coloration, and Crypsis)	332
Polyphenisms in Invertebrates	338
Polyphenisms in Vertebrates	350
Predator-Induced Defenses	355
Inborn Developmental Plasticity	357
Developmental Polymorphisms Are Not Genetic Polymorphisms	357
Part III: Epigenetics of Circumevolutionary Phenomena and the Mechanism of the Evolutionary Change	367
11 Transgenerational Developmental Plasticity—An Epitome of Evolutionary Change	369
TDP—Inherited Changes Without Changes in Genes	370
TDP in Nature	370
Phase Transition in Locusts	374
TDP in Experiments	379
Reconstructing the Chain of Events in Transgenerational Plasticity	383
The Mechanism of Induction of Sexually Reproducing	
Generation in <i>D. magna</i>	383
Insect Diapause	385
A Neurotransmitter Coding for a Life History Character	386
The Mechanism of Transgenerational Phase Transition in Locusts	387
The Origin of the Information for TDP	393
12 Evolution of Metazoans and Their Control System	405
Principles of Organization of the Multicellular Structure	405
Unicellular Antecedents of Metazoan Life	407

Unicellular Premises of Coordination of Cell Activity in Metazoans	408
Unicellular Precursors of the Metazoan Epigenetic Informational Structure	411
Impulse Conduction and Sensory-Motor Properties in Protozoans	412
Epigenetic Information in Unicellulars	413
The Origin of Eumetazoan Life	416
Precambrian Metazoans: An Obscure Control System	418
The Diffuse Control System and the Neural Controller:	
The Eumetazoan's Eureka	423
Centralization of the Neural Control System	432
Evolution of the Neuroendocrine Control System	435
Neuroendocrine Control System in Invertebrates	435
Evolution of the Neuroendocrine Control in Vertebrates	439
Part IV: Epigenetics of Metazoan Evolution	447
13 Origins of Evolutionary Novelty	449
The Epigenetic Hypothesis of Evolution and its Predictions	449
The Nature of the Evolutionary Change	450
Interactions Organism-Environment in Evolution: The Causal Relationship	452
Behavioral Prelude of Evolutionary Modifications of Animal Morphology	458
Epigenetic Determination of Modifications of Existing Phenotypes	459
Evolution of Body Size in <i>Manduca sexta</i>	461
The Growth Rate	462
Critical Weight	463
PTTH Delay Time	463
Evolution of Wings in Insects	465
Neural Control of Developmental Pathways and Gene	
Regulatory Networks of Insect Wings	466
Neo-Darwinian Explanation	470
Epigenetic Explanation	471
Evolution of Caste Developmental Polymorphisms in Insects	472
Neo-Darwinian Explanation of the Caste-Specific Wing	
Developmental Polymorphism in <i>P. megacephala</i>	479
Epigenetic Explanation of Caste-Specific Wing Developmental	
Polymorphism in <i>P. megacephala</i>	480
Evolution of the Seasonal Diphenism in the Butterfly <i>Bicyclus anynana</i>	481
Neo-Darwinian Explanation	482
Epigenetic Explanation	482
Evolution of Horns in Beetles	483
Neo-Darwinian Explanation	487
Epigenetic Explanation	488
Evolution of Appendages and Tetrapod Limbs	488
From Fish Fins to Tetrapod Limbs	494
Evolution of Digits	497
Role of the Nervous System in Limb Development	497

Neo-Darwinian Explanation	502
Epigenetic Explanation	502
Evolution of Wings in Bats	503
Neo-Darwinian Explanation	505
Epigenetic Explanation	505
Evolution of Blood Circulatory System	506
Evolution of Air-Breathing and Surfactant System in Vertebrates	506
Neo-Darwinian Explanation	510
Epigenetic Explanation	510
Evolution of Dentition in Vertebrates	510
Role of the Nervous System in Tooth Development	513
Neo-Darwinian Explanation	516
Epigenetic Explanation	517
Sudden Evolution of Morphology in the Threespine Stickleback, <i>Gasterosteus aculeatus</i>	518
Evolution of the Auditory System	519
Evolution of Ears and Ultrasonic Echolocation in Insects	520
Evolution of Ears in Vertebrates	522
Neo-Darwinian Explanation	524
Epigenetic Explanation	524
Evolution of Eyes	524
Evolution of Feathers	525
Molecular Mechanism of Feather Development	525
Successive Stages in Evolution of Feathers	528
Neo-Darwinian Explanation	528
Epigenetic Explanation	528
Evolution of Sexual Dichromatism in Birds	529
Neo-Darwinian Explanation	529
Epigenetic Explanation	532
Evolution of Life Histories	535
Evolution of Sexual Reproduction and Alternation of Asexual and Sexual Modes of Reproduction	535
Neo-Darwinian Explanation	538
Epigenetic Explanation	539
Evolution of Paedomorphosis in a Salamander Species	540
Evolution of Viviparity	542
Neo-Darwinian Explanation	547
Epigenetic Explanation	549
Evolution of Behavioral Characters in Insects	550
Evolution of Flight in Insects	550
Evolution of Avoidance Behavior in the Green Tree- and Red-Bellied Snakes	553
Neo-Darwinian Explanation	554
Epigenetic Explanation	554
Evolution of a New Ovulation Character in House Finches	555

Evolution of the Circadian System in Blind Moles	555
Neural Mechanisms of Metazoan Migration	556
Light-Dependent Magnetic Orientation	556
Trigeminal System of Geomagnetic Orientation	558
Experimental Induction and Evolution of New Characters	560
Rapid Evolution of Physiological Characters in <i>Drosophila</i>	560
Neo-Darwinian Explanation	560
Epigenetic Explanation	560
Evolution of Life History Characters in <i>D. melanogaster</i>	561
14 Evolution by Loss	579
Vestigialization of Metazoan Structures	579
Vestigialization of Limbs in Squamates	580
Simplification of the Brain and Morphology in Plethodontid Salamanders	581
Loss of Animal Structures in Nature	581
Loss of Wings in Insects	582
Loss of Wings in Phasmids	582
Loss of the Gasbladder in Fish	583
Loss of Teeth in Birds	583
Loss of Tetrapod Limbs	585
Loss of Limbs in Amphibians and Reptiles	585
Loss/Reduction of Limbs in Aquatic Mammals	588
Loss of Lungs in Salamanders	595
Loss of Eyes in the Mole Rat <i>Spalax ehrenbergi</i>	596
Loss of Characters in Cave-Dwelling Animals	596
Loss of Eyes in <i>Astyanax fasciatus</i> (mexicanus): Epigenetics of an Evolutionary Event	598
Loss of Pigmentation in the Cavefish <i>A. mexicanus</i>	607
Loss of the Male Conspicuous Coloration in Lizards	609
Loss of Sexual Dichromatism in Birds	609
Loss of Stages in Complex Life Cycles in Insects	610
Loss of Adult Stage of Development—Paedomorphosis in Insects	610
Loss of Terrestrial Mature Stage in Amphibians—Paedomorphosis	611
Neo-Darwinian Explanation	614
Epigenetic Explanation	614
Loss of Physiological Characters in <i>Drosophila melanogaster</i>	615
Loss of Resistance to Environmental Stressors in <i>D. melanogaster</i>	615
Loss of Behaviors	615
Loss of the Acoustic Startle Response in Moths	
Endemic to Bat-Free Habitats	615
15 Evolution by Reverting to Ancestral Characters	623
Evolutionary Reversions: The Course of Evolution Is Not Unidirectional	623
Atavisms: Ancestral Developmental Pathways May Be Conserved and Reactivated	627

Neo-Darwinian Explanation of Atavisms	629
Epigenetic Explanation of Atavisms	629
Evolutionary Reversions in Nature	629
Reversion of Shell Coiling in Gastropods	629
Reversion of Cartilaginous Skeleton in Fish	630
Reversion of the Hydrodynamic Body Shape in Marine Mammals	631
Reversion of Wings in Stick Insects	632
Reversion of Mandible in a Collembolan Insect	633
Reversion of Eyes in Ostracods	633
Reversion of Limbs in Snakes	633
Reappearance of <i>Musculus</i> IFE in the Bowerbird <i>Loria loriae</i> and the New Zealand Thrush, <i>Turnagra capensis</i>	633
Reversion of an Ancestral Digit in Guinea Pigs	634
Evolutionary Reversion of Life Histories	634
Evolutionary Reversions in Experiments	634
Experimental Reversion of Teeth in Birds	634
Neo-Darwinian Explanation	636
Epigenetic Explanation	636
Reversion of Ancestral Genetic Systems in Insects	636
Reversion of Life History Characters	637
Reversion of Ancestral Modes of Development in Gastropods	637
Reversion of Direct and Biphasic Development in Plethodontid Salamanders	637
Neo-Darwinian Explanation	638
Epigenetic Explanation	638
Reversion of Ancestral Reproductive Modes in Vertebrates	638
Reversion to Ancestral Oviparity in Sharks and Rays	640
Reversion of Viviparity in Reptiles	640
Re-Evolution of Oviparity in Bovides	641
Reversion of Arboreal Carabids to the Ground-Dwelling Habitat	641
Experimental Reversion of Ancestral Characters	642
Experimental Reversion of Ancestral Characters in <i>Drosophila</i>	642
Neo-Darwinian Explanation	642
Epigenetic Explanation	643
Experimental Reversion of "Hip Glands" in Voles	644
Neo-Darwinian Explanation	645
Epigenetic Explanation	645
Reversion of Sexuality in Parthenogenetic Lizards	645
Modified Ancestral Structures Reappear Stepwise	646
16 Neural Crest-Determined Evolutionary Novelties	651
Neural Crest-Determined Evolution in Vertebrates	651
Origin of the Neural Crest	652
Development of the Neural Crest	654
Migration of Neural Crest Cells to Target Sites	656

	The Source of Epigenetic Information of Neural Crest Cells	657
	Neural Crest and Vertebrate Morphogenesis	658
	Neural Crest–Determined Evolutionary Novelty in Vertebrates	662
	The Vertebrate Head	662
	Evolution of the Vertebrate Jaw	664
	Paleontological Evidence of the Evolution of the Middle Ear Ossicles	666
	Ontogeny of the Middle Ear Ossicles	667
	Neural Crest in Evolution of Dentition in Vertebrates	670
	An Evolutionary Event in Darwin's Finches	670
	The Role of the Neural Crest in Beak Development	671
	Evolution of the Adult Pigment Patterns in Danio Fish	679
	Evolution of the Cardiac Tract Outflow	680
	Evolution of the Forebrain Vasculature	681
	Neural Crest–Determined Development of Feathers in Bird's Head	681
17	Evolutionary Convergences: The Trend Toward	
	Sameness in Metazoan Evolution	687
	Predictability in Metazoan Evolution: Evolutionary Sameness	687
	Evolutionary Convergences in the Animal Kingdom	688
	Convergent Evolution of Eyes	689
	Convergence of Electrical Organs and Electoreception in Fish	689
	Evolutionary Convergences of the Nervous System	691
	Convergence of Cerebellum-Like Structures	693
	Convergence of Ear Asymmetry in Owls	693
	Convergence of the Ballistic Tongue	693
	Convergence of Plumage Patterns in Orioles	696
	Convergence of the Tribosphenic Molar Teeth	697
	Multifaceted Convergence in Tunas and Lamnid Sharks	698
	Convergence to a Common Mode of Reproduction in Frogs	698
	Convergence of Overall Body Form in Aquatic	
	Mammals and the Reptilian <i>Ichthyosaurus</i>	698
	Convergence of Placental Mammals and Australian Marsupials	701
	Paleontological Evidence for Convergence	701
	Neo-Darwinian Explanation of Convergent Evolution	703
	Epigenetic Explanation of Evolutionary Convergences	703
18	Species and Allopatric Speciation	707
	The Concept of Species	707
	The Neo-Darwinian Theory and the Problem of Speciation	709
	Speciation Modes According to the Spatial Occurrence	712
	Allopatric Speciation	712
	Verification of Allopatric Models of Speciation	714
	The Basic Allopatric Model	714
	The Reinforcement Model	716
	Divergence-with-Gene-Flow Model	718

Peripatric Speciation	718
The Founder Effect Model	719
The Bottleneck Model	720
Ecological Speciation	720
19 Epigenetics of Sympatric Speciation—Speciation as a Mechanism of Evolution	725
Recognition of the Reality of Sympatric Speciation	725
Sympatric Speciation: No Changes in Genes Are Involved	726
Natural Selection and Sexual Selection in Sympatric Speciation	729
Neurocognitive Populational Breakup	731
Reproductive Isolation via Mate Choice	732
Evolution of Mating Preferences	733
Fisher's Runaway Hypothesis	734
The "Good Gene" Hypothesis	734
Sensory Exploitation Hypothesis	736
Neurocognitive Mechanisms of Sympatric Reproductive Isolation	737
Evolution of Receiver Biases	737
Evolution of Sender's Signaling	742
Mate Recognition System	745
Neurocognitive Mechanism of Reproductive Isolation	751
Visual-Cognitive Mechanism of Reproductive Isolation	751
Neural Reception of Visual Signaling	751
Neural Reception and Processing of Bioluminescent Signals	752
Olfactory-Cognitive Mechanism of Reproductive Isolation	755
Neural Reception and Processing of Olfactory Signals	755
Olfactorily Determined Reproductive Isolation in Sympatry	757
Auditory-Cognitive Reproductive Isolation	759
Neural Reception and Processing of Acoustic Signals	759
The Song Circuit in the Brain of Birds	761
Acoustically Determined Reproductive Isolation in Sympatry	762
Electrocognitive Mechanism of Reproductive Isolation	766
Electrogenesis in Fish	766
The Structure of the System of Electoreception in Fish	767
Electrosensory Communication in Social and Reproductive Behavior	769
Evolution of Electrosignals, Electrocognitive Isolation of Populations, and Sympatric Speciation in Fish	774
Neo-Darwinian Explanation of Sympatric Reproductive Isolation and Speciation of <i>Brienomyrus</i> spp.	776
Epigenetic Explanation of Sympatric Reproductive Isolation and Speciation of <i>Brienomyrus</i> spp.	776
Brain, Behavior, and Evolution	777
Behavioral Drive or Brain Size—Environmental Change Hypothesis	778
Neo-Darwinian Explanation of the Correlation Between the Brain Size and Evolutionary Rates	779

Epigenetic Explanation of the Correlation Between the Brain Size and Evolutionary Rates	780
Neurocognitive Sympatric Speciation	781
Neurocognitive Basis of Sympatric Speciation	782
Neurocognitive Sympatric Speciation in Nature	783
Neurocognitive Sympatric Speciation in Insects	783
Neo-Darwinian Explanation of Sympatric Speciation by Host Plant Shifting	787
Epigenetic Explanation of Sympatric Speciation by Host Plant Shifting	788
Neurocognitive Sympatric Speciation in Fish	790
Neurocognitive Sympatric Speciation in Salamanders	792
Neurocognitive Sympatric Speciation in Birds	793
Despeciation or Fusion of Species	793
