Section I Human Diseases: In Vivo and In Vitro Models

1. *Drosophila*: A Model for Biotechnologists

K. Ravi Ram and D. Kar Chowdhuri

Summary	3
What You Can Expect to Know	3
History and Methods	3
Introduction	3
Classical Aspects of <i>Drosophila melanogaster</i>	4
History	7
Principle	9
Methodology	10
Culturing of <i>Drosophila</i>	10
Preparation of <i>Drosophila</i> Food Medium	10
Handling of Flies	10
Fly Disposal	10
Egg Collection	10
Dechorination of Eggs	10
Preparation of DNA for Injection	11
Protocols	11
Protocol for Germ-Line Transformation in <i>Drosophila</i>	11
Ethical Issues	12
Translational Significance	13
<i>Drosophila</i> Models of Human Disease	13
<i>Drosophila</i> -Based Models for Understanding Human Neurodegenerative Diseases	13
<i>Drosophila</i> as a Model for Understanding Human Metabolic Disorders	14
<i>Drosophila</i> as a Model for Understanding Nephrolithiasis (Kidney Stones)	15
<i>Drosophila</i> -Based Model for Understanding HIV Pathology	15

<i>Drosophila</i> -Based Therapeutic Peptide Production	15
World Wide Web Resources	17
References	17
Further Reading	18
Glossary	18
Abbreviations	19
Long Answer Questions	19
Short Answer Questions	19
Answers to Short Answer Questions	19

2. Animal Models of Tuberculosis

*Devyani Dube, Madhu Gupta, Udit Agrawal
and Suresh P. Vyas*

Summary	21
What You Can Expect to Know	21
History and Methods	22
Introduction	22
Comparative Pathology of TB in Humans and Animals	22
Pathogen Diversity: Crossing Species Barriers	22
Host Diversity: Fundamental Processes and Fine Tuning	23
Animal Models of TB: Limits and Lessons	24
Various Animal Models	25
Mouse Model	25
Guinea Pig Model	26
Rabbit Model	26
Non-Human Primate Model	26
Cattle Model	28
Ethical Issues	28
Translational Significance	30
World Wide Web Resources	30
Protocols	30
Preparing <i>M. tuberculosis</i> Inoculum for Aerosol Exposure	30
Aerosol Infection of Mice Using the Middlebrook Apparatus	30
Aerosol Infection of Guinea Pigs Using a Madison Chamber	31
Bacterial Loading	31

Intravenous Infection of Mice with <i>M. tuberculosis</i>	31	4. Epigenetics and Animal Models: Applications in Cancer Control and Treatment	
Isolation of Samples for Determining <i>M. tuberculosis</i> Load by RT-PCR	32	<i>Mukesh Verma, Neelesh Agarwal and Mudit Verma</i>	
Determination of Bacterial Loads in Target Organs	32	Summary	57
Preparation of Lungs or Other Tissues for Histology	35	What You Can Expect to Know	57
Preparation of Lung Cell Suspension	35	History and Methods	58
References	35	Introduction	58
Further Reading	36	History: Landscape of Epigenetics	58
Glossary	36	Principle	61
Abbreviations	36	Use of Mouse Models in the Epigenetics of Cancer	61
Long Answer Questions	36	Examples with Applications	61
Short Answer Questions	36	Methodology	64
Answers to Short Answer Questions	36	Methylation Profiling	64
		Histone Profiling	64
		Nucleosome Mapping	64
		Data Storage and Processing	64
		Protocols	65
		Some Useful Points to Consider in a Project Involving Epigenetic Profiling	65
		Ethical Issues	67
		Translational Significance	67
		World Wide Web Resources	69
		References	70
		Further Reading	71
		Glossary	71
		Abbreviations	72
		Long Answer Questions	72
		Short Answer Questions	72
		Answers to Short Answer Questions	72
3. Animal Models for Neurodegenerative Disorders		5. Development of Mouse Models for Cancer Research	
<i>Hitomi Tsuiji and Koji Yamanaka</i>		<i>Amrita Datta and Debasis Mondal</i>	
Summary	40	Summary	73
What You Can Expect to Know	40	What You Can Expect to Know	73
History and Methods	40	History and Methods	74
Introduction	40	Introduction	74
Neurodegenerative Diseases	40	History	75
Amyotrophic Lateral Sclerosis (ALS)	40	Principle	75
Spinal Muscular Atrophy (SMA)	41	IACUC Approval	75
Spinal and Bulbar Muscular Atrophy (SBMA)	42	IACUC Guidelines	76
Principles	43	Methodology	76
Genetics of ALS	43	Inbred Mice	76
Genetics of SMA	44	Examples with Applications	78
Genetics of SBMA	44	Immunocompetent Mice	78
Methodology	44	Immunodeficient Mice	81
Generation of Transgenic Mice	45	Checklist for a Successful <i>In Vivo</i> Experiment	83
Cre-loxP Technology	46		
ALS Models	47		
SMA Models	49		
SBMA Models	49		
Examples and their Applications	49		
SOD1-Linked ALS	50		
Other ALS	51		
SMA	52		
SBMA	52		
Ethical Issues	53		
Translational Significance	53		
World Wide Web Resources	54		
References	54		
Further Reading	55		
Glossary	55		
Abbreviations	55		
Long Answer Questions	56		
Short Answer Questions	56		
Answers to Short Answer Questions	56		

Protocols	85	Public Health Concerns with Screening	
An Orthotopic Mouse Model of Colorectal Cancer	85	Implementation	109
A Xenograft Model of Prostate Cancer	87	Risk	109
Metastasis	87	Benefit vs. Cost	110
Ethical Issues	88	Patient Autonomy and Coercion	110
Translational Significance	88	Public Health Concerns about Vaccine	
World Wide Web Resources	89	Implementation	110
References	90	Treatment	110
Further Reading	91	Ablative Techniques	110
Glossary	91	Excisional Techniques	110
Abbreviations	92	Follow-Up for Excisional/Ablative Treatment	111
Long Answer Questions	92	Hysterectomy	111
Short Answer Questions	92	Therapeutic Interventions	111
Answers to Short Answer Questions	93	Preventive Measures	112
6. Human Papillomavirus (HPV): Diagnosis and Treatment		Translational Significance	112
<i>Mausumi Bharadwaj, Showket Hussain, Richa Tripathi, Neha Singh and Ravi Mehrotra</i>		Prophylactic HPV Vaccines	112
Summary	96	Therapeutic HPV Vaccines	113
What You Can Expect to Know	96	Genetic-Based DNA Vaccines	113
History and Methods	96	Issues/Unanswered Questions Associated with HPV Vaccines	113
Cancer Overview	96	Vaccine Efficacy	113
Classification of Cancer	96	Vaccine Protection	113
Carcinoma	96	Who Should be Vaccinated?	114
Sarcoma	97	Future Prospects of HPV with Respect to Biotechnology	114
Myeloma	97	Conclusion	115
Leukemia	97	Key Points	115
Lymphoma	97	World Wide Web Resources	116
Mixed Types	97	References	117
Tumor Grading	97	Further Reading	117
Cancer Staging	97	Glossary	118
Cancer-Causing Agents	98	Abbreviations	118
Oncogenic Viruses	98	Long Answer Questions	119
Chemicals	98	Short Answer Questions	120
Radiation	99	Answers to Short Answer Questions	120
Cervical Cancer	99	7. Human DNA Tumor Viruses and Oncogenesis	
Anatomy of the Female Pelvis	99	<i>Pravinkumar Purushothaman and Subhash Chandra Verma</i>	
Historical Overview	100	Summary	121
Mistaken Theories of Causation	100	What You Can Expect to Know	121
The First Breakthrough	101	History and Methods	122
Nobel Prize for Discovering HPV	101	Introduction	122
Prevalence and Epidemiology of Cervical Cancer	101	Transformation and Oncogenesis	122
Global Scenario	101	History of Human DNA Tumor Viruses and Cancer	123
Symptoms of Cervical Cancer	102	Epstein-Barr Virus	125
Types of Cervical Cancer	102	Kaposi's Sarcoma-Associated Herpesvirus (KSHV)	125
Risk Factors for Cervical Cancer	102	Human Papillomavirus (HPV)	126
Pre-Cancer Classification	102	Hepatitis B Virus (HBV)	127
Cancer Classification	103		
Human Papillomaviruses (HPVs)	104		
Ethical Issues	109		

Human Polyomaviruses	128
Principle	129
Current Research Perspectives	134
Ethical Issues	135
Translational Significance	135
World Wide Web Resources	135
References	136
Further Reading	136
Glossary	137
Abbreviations	137
Long Answer Questions	137
Short Answer Questions	137
Answers to Short Answer Questions	137

8. Animal Models for Human Disease

Mohammad Reza Khorramizadeh and Farshid Saadat

Summary	139
What You Can Expect to Know	139
History and Methods	140
Introduction	140
Rheumatoid Arthritis	140
Epidemiology and Etiology	140
Pathogenesis	140
Clinical Manifestations	141
Treatment	141
Experimental Models	142
Methodology and Protocols	143
Multiple Sclerosis	144
Epidemiology and Etiology	144
Pathogenesis	145
Clinical Manifestations	145
Treatment	146
Experimental Models	146
Methodology and Protocol	146
Ethical Issues	149
Translational Significance	150
World Wide Web Resources	150
References	150
Further Reading	151
Glossary	151
Abbreviations	153
Long Answer Questions	153
Short Answer Questions	153
Answers to Short Answer Questions	154

9. HIV and Antiretroviral Drugs

*Ashish Swarup Verma, Iqram Govind Singh,
Ruby Bansal and Anchal Singh*

Summary	155
What You Can Expect to Know	155
History and Methods	156
Introduction	156

Discovery and Origin of HIV	156
History of HIV and AIDS	156
Global Disease Burden	157
Clinical Stages of HIV	158
Classification of Clinical Stages	159
Molecular Biology of HIV	160
Envelope (Env)	161
Group Specific Antigen (Gag)	161
Long-Terminal Repeats (LTR)	161
Negative Factor (Nef)	161
Polymerase (Pol)	161
Regulator of Expression of Viral Proteins (Rev)	162
Transactivator of Transcription (Tat)	162
Viral Infectivity Factor (Vif)	162
Viral Protein U (Vpu)	162
Viral Protein R (Vpr)	162
Replication: Steps and Drug Targets	162
Antiretroviral Drugs	164
HIV Resistance and Antiretroviral Treatment	165
Highly Active Antiretroviral Treatment (HAART)	165
Salvage Therapy	165
Drug Holiday	165
New Types of Antiretrovirals	166
Methodology and Principles	167
Growing HIV Stock	167
Assays for Antiretroviral Drugs	168
Monitoring Antiretroviral Drug Toxicity	169
Evaluating Anti-HIV Effects of Antiretroviral Drugs	170
NeuroAIDS: An Emerging Health Concern	171
Bone Marrow Transplantation: A Probable Cure for HIV	172
Ethical Issues	173
Translational Significance	173
World Wide Web Resources	174
References	174
Further Reading	175
Glossary	175
Abbreviations	175
Long Answer Questions	176
Short Answer Questions	176
Answers to Short Answer Questions	176

10. Animal Biotechnology as a Tool to Understand and Fight Aging

Pawan Kumar Maurya

Summary	177
What You Can Expect to Know	178
History and Methods	178
Introduction	178
Theories of Aging	178

Principle	181	Techniques for the Generation of Spheroids	200
Reactive Oxygen Species – Causative Agent of Aging	181	Hanging-Drop Method	200
Methodology: Measurement of Free Radicals and Methods to Monitor Aging	183	Liquid Overlay Method	201
Protein Oxidation/Protein Carbonyl Content	183	Microfabricated Microstructures Method	202
Common Laboratory Animal Experimental Models for Aging Research	184	Rotatory Flask Methods	202
Mouse	184	Surface Modification-Based Methods	202
Fish	184	Chip-Based Spheroid Generation	202
Other Models	185	Protocol for Tumor Spheroid Generation	203
Polyphenols as an Agent to Fight Aging	185	Drug Treatment Protocol	203
Flavonoids	185	Parameters to Monitor Drug Efficacy in 3-D Cultures	203
Tea as a Source of Anti-Aging Compounds	185	Radiation Response of Tumor Cells and its Modifications	203
Types of Teas	186	Response to Anticancer Drugs	204
Tea Catechins	187	Response to Photodynamic Therapy	205
Health Benefits of Tea	187	Response to Anti-Angiogenesis Therapeutics	205
Molecular Mechanisms of Green Tea Effects	187	Evaluation of Response to Immunotherapy	206
Green Tea in Aging and Neurodegenerative Diseases	188	Application of 3-D Cultures in Other Diseases	207
Animal Biotechnology as a Tool to Understand and Fight Aging	188	Conclusions	207
Ethical Issues	188	Ethical Issues	207
Translational Significance	189	Translational Significance	207
World Wide Web Resources	189	World Wide Web Resources	208
References	189	References	208
Further Reading	190	Further Reading	209
Glossary	190	Glossary	210
Abbreviations	190	Abbreviations	210
Long Answer Questions	190	Long Answer Questions	210
Short Answer Questions	191	Short Answer Questions	210
Answers to Short Answer Questions	191	Answers to Short Answer Questions	210

Section II

Animal Biotechnology: Tools and Techniques

11. MultiCellular Spheroid: 3-D Tissue Culture Model for Cancer Research

Suchit Khanna, Anant Narayan Bhatt and Bilikere S. Dwarakanath

Summary	195
What You Can Expect to Know	195
History and Methods	196
Introduction	196
MultiCellular Tumor Spheroids	196
Historical Facts Towards the Development of Tissue Culture Technology from 2-D and 3-D Cultures	199
An Example where 3-D Culture is More Beneficial over 2-D Culture	200

12. Animal Tissue Culture: Principles and Applications

Anju Verma

Summary	212
What You Can Expect to Know	212
History and Methods	212
Introduction	212
Development of Animal Cell Culture	213
Basic Concept of Cell Culture	214
How are Cell Cultures Obtained?	214
Cell Passage and Use of Trypsin	214
Quantitation	215
Reconstruction of Three-Dimensional Structures	215
Types of Cell Culture	215
Primary Cell Culture	215
Secondary Cell Culture	216
Cell Line	216
Finite Cell Lines	216
Indefinite Cell Lines	216
Commonly Used Cell Lines	216
Advantages of Continuous Cell Lines	216
Growth Cycle	217
Phases of the Growth Cycle	217

Monitoring Cell Growth	217	History	234
Characteristics of Cell Cultures	218	Basic Approach to Tissue Engineering:	
Cell Viability	218	Principles and Methodology	234
Cytotoxicity	218	Cells	234
Hayflick's Phenomenon	219	Scaffolds	235
Culture Media	219	Media	235
Basic Components in Culture Media	220	Bioreactors	235
Serum	220	Methodology	235
Serum-Free Media	221	Scaffold Design	235
Chemically Defined Media	221	Materials for Scaffolds	237
Protein-Free Media	221	Scaffold Fabrication Methods	237
Characterization of Cell Lines	221	Fiber Bonding	237
Identity Testing	221	Solvent Casting and Particulate Leaching	238
Purity Testing	222	Melt Molding	238
Stability Testing	222	Membrane Lamination	239
Viral Testing Assays	222	Phase Separation	239
Advantages of Animal Cell Culture	222	Gas Foaming	239
Disadvantages of Animal Cell Culture	222	Polymer Ceramic Composite Foam	239
Ethical Issues	223	Solid Free form Techniques	239
Use of Fetal Bovine Serum in Animal		Pressure-Assisted Micro Syringe Method	239
Culture Media	223	Freeze Drying	240
Translational Significance	223	Examples of Tissue-Engineered Organs	240
Anti-Viral Vaccines	223	Skin	240
Viral Particles Production by Cell Culture	223	Pancreas	240
Production of Virus-Like Particles (VLPs)	224	Liver	240
Recombinant Therapeutic Proteins	225	Kidney	240
Main Therapeutic Proteins	225	Bone/Cartilage	240
Gene Therapy	227	Nerves	241
Importance of Cell Culture in Gene Therapy	227	Blood Vessels	241
Clinical Studies	227	Tissue Engineering Using Stem Cells	241
Biopesticides	227	Issues and Challenges	241
Baculovirus Production in Animal Cell Culture	227	Ethical Issues	242
Cell Lines for Biopesticide Production	228	Translational Significance	242
Viral Mutant Formation in Cell Culture	228	World Wide Web Resources	242
Monoclonal Antibodies	228	References	242
Stem Cells	228	Further Reading	244
Culturing Embryonic Stem Cells in the		Glossary	244
Laboratory	228	Abbreviations	244
World Wide Web Resources	229	Long Answer Questions	244
References	229	Short Answer Questions	244
Further Reading	230	Answers to Short Answer Questions	244
Glossary	230		
Abbreviations	230		
Long Answer Questions	231		
Short Answer Questions	231		
Answers to Short Answer Questions	231		
13. Concepts of Tissue Engineering		14. Nanotechnology and Its Applications	
<i>Poonam Verma and Vipin Verma</i>		to Animal Biotechnology	
Summary	233	<i>Ashok K. Adya and Elisabetta Canetta</i>	
What You Can Expect to Know	233	Summary	247
History and Methods	234	What You Can Expect to Know	247
Introduction	234	History and Methods	248
		Introduction	248
		Methodologies	249
		Nanotools and Nanotechniques	249
		Chemical Modification of AFM Probes	255

Nano-Structural Features of Animal Cells and Tissues	255	Polyclonal Antibody <i>versus</i> Monoclonal Antibody	269
Nanomechanical Properties of Animal Cells and Tissues	255	Polyclonal Antibodies (PoAb)	269
Nanomanipulation	256	Monoclonal Antibodies (MoAb)	270
Nanofabrication	256	Naming Monoclonal Antibodies	271
Examples of Nanotechnology Applications to Animal Biotechnology	256	Prefix	271
AFM as a Diagnostic Tool to Identify Orthopoxvirus in Animals	256	Infix-1	272
Frictional Response of Bovine Articular Cartilage	256	Infix-2	272
Microstructure and Nanomechanical Properties of Cortical Bone Osteons from Baboons	256	Additional Words	272
Use of Calf Thymus DNA for Cancer Experiments	257	Antibodies as Therapeutics:	
Characterization of Mitochondria Isolated from Normal and Ischemic Hearts in Rats	257	Adverse Effects	272
Polymorphism and Ultrastructural Organization of Prion Protein	257	Serum Sickness	272
Ultrastructural Investigation of Animal Spermatozoa Using AFM	257	Human Anti-Monoclonal Antibody (HAMA) Response	273
Multifactor Analysis of Living Animal Cells for Biotechnology and Medicine	258	Human Anti-Chimeric Antibody (HACA) Response	273
Ethical Issues	258	Human Anti-Humanized Antibody (HAHA) Response	274
Translational Significance	258	Applications of Antibodies	274
World Wide Web Resources	259	Therapeutic Applications	274
References	259	Analytical Applications	275
Further Reading	260	Preparative Applications	276
Glossary	261	Methodology, Principles, and Protocols	276
Abbreviations	261	Polyclonal Antibodies	276
Long Answer Questions	261	Monoclonal Antibodies	278
Short Answer Questions	261	Antibody Titration	281
Answers to Short Answer Questions	262	Biochemical Pathway: Hybridoma Selection	282
15. Antibodies: Monoclonal and Polyclonal		Ethical Issues	283
<i>Anchal Singh, Sushmita Chaudhary, Ashima Agarwal and Ashish Swarup Verma</i>		Translational Significance	284
Summary	265	World Wide Web Resources	284
What You Can Expect to Know	265	References	285
History and Methods	266	Further Reading	285
Introduction	266	Glossary	286
Tiselius and Kabat's Experiment	266	Abbreviations	286
History	266	Long Answer Questions	286
Elucidation of Immunoglobulin Structure	267	Short Answer Questions	286
Edelman's Experiment	268	Answers to Short Answer Questions	286
Porter's Experiment	268		
Nisonoff's Experiment	268	16. Molecular Markers: Tool for Genetic Analysis	
Conclusion from Papain and Pepsin Digestion	268	<i>Avinash Marwal, Anurag Kumar Sahu and R.K. Gaur</i>	
Immunoglobulin G: A Prototype for Immunoglobulin	268	Summary	289
		What You Can Expect to Know	289
		History and Methods	290
		Introduction	290
		Methodology	291
		Restriction Fragment Length Polymorphism (RFLP)	291
		Allele-Specific Oligonucleotide (ASO)	292
		Allele-Specific PCR (AS-PCR)	293
		Single-Strand Conformation Polymorphism (SSCP)	293

Sequence Tagged Site (STS)	293	Glossary	324
Random Amplified Polymorphic DNA (RAPD)	293	Abbreviations	324
Restriction Landmark Genome Scanning (RLGS)	294	Long Answer Questions	324
Single Nucleotide Polymorphisms (SNP)	294	Short Answer Questions	324
Amplified Fragment Length Polymorphism (AFLP)	295	Answers to Short Answer Questions	325
Methylation Sensitive Amplification Polymorphism (MSAP)	296		
Miniature Inverted-Repeat Transposable Element (MITE)	296		
Microsatellites	296		
Ethical Issues	299		
Translational Significance	301		
World Wide Web Resources	301

		Long Answer Questions	344
		Short Answer Questions	344
		Answers to Short Answer Questions	344
		19. Next Generation Sequencing and Its Applications	
		<i>Anuj Kumar Gupta and U.D. Gupta</i>	
		Summary	345
		What You Can Expect to Know	346
		History and Methods	346
		Introduction	346
		History of DNA Sequencing	346
		Generation of Sequencing Technologies	346
		Principle of Sanger Sequencing vs. Next Generation Sequencing	347

Next Generation/Second Generation Technologies	348	Short Answer Questions	366
Pyrosequencing Technology	348	Answers to Short Answer Questions	366
Reversible Terminator Technology	349		
Sequencing by Ligation Technology	349	20. Biomolecular Display Technology: A New Tool for Drug Discovery	
Third Generation Sequencing Technologies	350	<i>Madhu Biyani, Koichi Nishigaki, and Manish Biyani</i>	
Single Molecule Real-Time Sequencing	350	Summary	369
True Single Molecule Sequencing (tSMS)	350	What You Can Expect to Know	369
Ion Semiconductor Sequencing	351	History and Methods	370
Other/4th Generation Sequencing Technologies	351	Introduction	370
Nanopore Sequencing	351	Principle	370
Polony-Based Sequencing Technology	352	Necessity: Small Molecule vs. Biomolecular (Biologics) Drugs	371
DNA Nanoball Sequencing	352	Methodology: Biomolecular Display Technologies	373
Downstream Bioinformatics	353	Phage Display	374
<i>De Novo</i> Assembly	353	Ribosome Display	376
Mapping	353	mRNA Display	377
General Principles of NGS Methods in Various Applications	354	Other Display Systems	377
Whole Genome <i>De Novo</i> Sequencing	354	A General Method for Discovery of Functional Peptide Aptamers	378
Whole Genome Re-Sequencing	355	Conclusion and Future Perspectives	380
Targeted Re-Sequencing	356	Ethical Issues	380
Transcriptome Sequencing	356	Translational Significance	380
Amplicon Sequencing	357	References	381
ChIP DNA Sequencing	357	Further Reading	382
Small RNA Sequencing	357	Glossary	383
Animal Biotechnology and the Cattle Genome	357	Abbreviations	383
Applications of NGS in Animal Biotechnology	358	Long Answer Questions	383
Evolutionary Research	358	Short Answers Questions	383
Epigenetics	359	Answers to Short Answers Questions	384
Metagenome Sequencing	359		
Ancient DNA	359	21. In Silico Models: From Simple Networks to Complex Diseases	
Genomic Variability and SNP/CNV Discovery	360	<i>Debmalya Barh, Vijender Chaitankar, Eugenia Ch Yiannakopoulou, Emmanuel O Salawu, Sudhir Chowbina, Preetam Ghosh and Vasco Azevedo</i>	
Beef Cattle Selection	360	Summary	385
Animal Breeding and Improvement of Livestock Productivity and Health	361	What You Can Expect to Know	385
Food, Safety, and Nutrition	361	History and Methods	386
Transgenics	361	Bioinformatics in Animal Biotechnology	386
Applications of NGS in Human Health	361	Bioinformatics and Systems Biology	387
Cancer Research	361	Common Computational Methods in Systems Biology	387
Genetic Disorders	362	Experimental Methods in Systems Biology	388
Human Microbiome	362	Protein-Protein Interactions (PPIs)	388
Pre- and Post-Natal Diagnosis	362	Transcriptional Control Networks	388
Infectious Diseases	362	Signal Transduction Networks	388
Personalized Medicine	362	Mathematical Modeling Techniques	389
Future Perspectives	363	The Concept of Modeling	390
Challenges	363		
Ethical Issues	363

Section III

Animal Biotechnology: Applications and Concerns

22. Transgenic Animals and their Applications

*Shet Masih, Pooja Jain, Rasha El Baz
and Zafar K. Khan*

Summary	407
What You Can Expect to Know	407
Introduction	408
Creating Transgenic Animals	409
Construction of a Transgene	409
Microinjection	409
Embryonic Stem Cell Transfer	409
Retrovirus-Mediated Gene Transfer	411
Gene Knockdown and RNA Interference	412
Screening for Transgenic Positives	412
Transgenic Animals as Disease Models	413
OncoMouse	413
AIDS Mouse	413
Alzheimer's Mouse	413
Parkinson's Fly	414
Transgenic Animals as Biological Models	414
ANDi (Monkey)	414
Doogie (Smart Mouse)	414
Supermouse	414
Youth Mouse	414
Influenza-Resistant Mouse	415

23. Stem Cells: A Trek from Laboratory to Clinic to Industry

Bhudev C. Das and Abhishek Tyagi

Summary	426
What You Can Expect to Know	426
History and Methods	426
History of Stem Cell Research	426
What are Stem Cells and Why are they Important?	427
What Makes Stem Cells Special?	428
Differentiation Potential/Potency of Stem Cells	428
Totipotent Stem Cells	428
Pluripotent Stem Cells	429
Multipotent Stem Cells	429
Unipotent Stem Cells	429
Are Stem Cells Immortal?	429
Characteristics of Stem Cells	429
Stem Cell Plasticity	429
Mechanisms of Stem Cell Plasticity	429
Stem Cell Fate	430
Stem Cell Quiescence	430
Where to Find Stem Cells?	430
Embryos	430
Fetal Tissue	430
Amniotic Fluid-Derived Stem Cells (AFSCs)	431
Where do Stem Cells Come From?	431
Embryonic Stem Cells (ESCs)	431
Embryonic Germ Cells (EGCs)	432
Adult Stem Cells (ASCs)	432

How are Stem Cells Identified, Isolated, and Characterized?	432	Short Answer Questions	449
Embryonic Stem Cell Identification	433	Answers to Short Answer Questions	449
Adult Stem Cell Identification	433		
Methods to Identify Stem Cells	433		
The Stem Cell Niche	436	24. Role of Cytogenetics and Molecular Genetics in Human Health and Medicine	
What Keeps Stem Cells in their Niche?	436	<i>Madhumita Roy Chowdhury and Sudhisha Dubey</i>	
How Do Stem Cells Get Activated in their Niche?	437	Summary	451
Growing Stem Cells in the Laboratory	437	What You Can Expect to Know	451
iPSCs: A Stem Cell Research Breakthrough	437	History and Methods	452
Cancer Stem Cells (CSCs)	438	Introduction	452
Protocols for Hoechst 33342 or DCV Staining and Stem Cell Purification	440	Cytogenetics: An Overview	452
Hoechst or DCV Staining	440	Chromosome Morphology and Classification	453
Flow Cytometry Set-Up	440	Nomenclature	454
Tips for Optimal Resolution of SP Cells	440	Chromosomal Disorders	455
Ethical Issues	440	Structural Abnormalities	456
Stem Cell Research at the Crossroads of Religion and Social Issues	440	Chromosome Breakage and Fragile Sites	458
Greek Orthodox and Roman Catholic Churches	441	Methodology: Application of Different Cytogenetic Techniques in Diagnosis of Genetic Disorders	459
Protestant Churches	441	Identification of Chromosomes and Karyotyping	459
Judaism	441	Fluorescence <i>In Situ</i> Hybridization (FISH)	460
Islamic Countries	441	Spectral Karyotyping (SKY) and Multicolor FISH (M-FISH)	460
Hinduism and Buddhism	441	Comparative Genomic Hybridization (CGH) and array-CGH (aCGH)	461
Translational Significance	442	Principle	462
Therapeutic Potential of Stem Cells: A New Age in Health Care	442	Molecular Genetics: An Overview	462
Stem Cell Therapy: A Ray of Hope	442	Hereditary Material	462
Principles of Stem Cell Therapy	442	Single-Gene Disorders	465
How are Stem Cells Used in Cell-Based Regenerative Therapies?	443	Multigenic and Multifactorial Disorders	466
Can Stem Cells be used to Find New Medicines?	443	Mitochondrial Disorder	466
Potential Uses of Stem Cells	443	Acquired Somatic Genetic Disorders	466
Damaged Tissue Replacement	444	Methodology: Application of Different Molecular Techniques for Diagnosis of Genetic Disorders	466
Human Development Studies	444	Southern Blotting	467
New Drug Testing	444	Polymerase Chain Reaction (PCR)	468
Screening Toxins	444	DNA Sequencing	468
Testing Gene Therapy Methods	444	Principle	469
Stem Cell Banking	445	Case Study	469
What is Stem Cell Banking?	445	Ethical Issues	470
Why Bank Stem Cells?	445	Translational Significance	471
Present Scope and Future Possibilities of Stem Cell Banking	445	World Wide Web Resources	471
Stem Cell Banks in India	445	References	471
World Wide Web Resources	445	Further Reading	472
References	447	Glossary	472
Further Reading	447	Abbreviations	472
Glossary	447	Long Answer Questions	472
Abbreviations	448	Short Answer Questions	472
Long Answer Questions	449	Answers to Short Answer Questions	472

25. Antibodies and their Applications

Fahim Halim Khan

Summary	473
What You Can Expect to Know	473
History and Methods	474
Immunodiagnostics: Role of Antibodies	474
Introduction	474
History	474
Antigens and Antibodies	474
Polyclonal and Monoclonal Antibodies	475
Hybridoma Technology and Methodology	476
Application of Monoclonal Antibodies	478
Antibody Constructs	485
Diabody	485
Human Antibodies from Transgenic Mouse	485
Bispecific Antibodies	486
Ethical Issues	487
Translational Significance	487
World Wide Web Resources	488
Pros	489
Cons	489
Websites	489
References	489
Further Reading	489
Glossary	489
Abbreviations	490
Long Answer Questions	490
Short Answer Questions	490
Answers to Short Answer Questions	490

26. Vaccines: Present Status and Applications

*Dinesh K. Yadav, Neelam Yadav and
Satyendra Mohan Paul Khurana*

Summary	491
What You Can Expect to Know	491
History and Methods	491
Introduction	491
Types of Vaccines	493
Traditional Vaccines	493
Toxoid Vaccines	496
Subunit Vaccines	497
Conjugate Vaccines	498
DNA Vaccines	498
Recombinant Vector Vaccines	500
Molecular Farming using Plants as Bio-Reactors	501
Role of Adjuvants	502
Immune-Stimulating Complexes (ISCOMs)	503
Protocol for the Development of Vaccines	503
Future Challenges in Vaccine Development	504
Foremost Infectious Disease Problems	504
Infectious Disease Threats	504

Ethical Issues	505
Mandates	505
Vaccine Research and Testing	505
Informed Consent	505
Access Issues	506
Translational Significance	506
World Wide Web Resources	506
References	506
Further Reading	507
Glossary	507
Abbreviations	507
Long Answer Questions	507
Short Answer Questions	508
Answers to Short Answer Questions	508

27. Safety Assessment of Food Derived from Genetically Modified Crops

*Premendra D. Dwivedi, Mukul Das,
Sandeep Kumar and Alok Kumar Verma*

Summary	509
What You Can Expect to Know	509
History and Methods	510
Introduction	510
Rationale for the Allergenicity Assessment of GM Foods	511
Mechanism of Food Protein-Induced Allergenicity	511
Simulated Gastric Fluid (SGF) Assay	512
How the SGF Assay Works	512
Components of SGF	514
General Protocol of the SGF Assay	515
Factors Relevant to Gastrointestinal Digestion of Allergens	515
Supportive and Negative Evidence of SGF	516
Simulated Intestinal Fluid (SIF) Assay	516
General Protocol of SIF Assay	516
Effect of Assay Conditions on Protein Stability in the SIF Assay	517
Supportive and Negative Evidences of the SIF Assay	517
Contradictory Results of the SIF Digestibility of Food Proteins	517
Thermal Treatment Assay	518
Mechanism of Thermal Treatment Assay	518
Standard Protocol for Thermal Treatment Assay	519
Functional Stability of Proteins and Importance of Thermal Stability Assay	520
Contradictory Results in Thermal Treatment Procedure	521
Ethical Issues	521
Translational Significance	522
World Wide Web Resources	522

References	522
Further Reading	523
Glossary	523
Abbreviations	523
Long Answer Questions	524
Short Answer Questions	524
Answers to Short Answer Questions	524

28. Nanotechnology and Detection of Microbial Pathogens

Rishi Shanker, Gulshan Singh, Anurag Jyoti, Premendra Dhar Dwivedi and Surinder Pal Singh

Summary	525
What You Can Expect to Know	525
History and Methods	526
Introduction	526
Indicators of Microbial Water Quality	526
Need for Detection of Water- and Food-Borne Pathogens	527
Conventional Methods to Detect Fecal Indicator Organisms and Other Pathogenic Bacteria	528
Most Probable Number Method	529
Membrane Filtration Method	529
Defined Substrate Methods	529
Rapid Detection Using Chromogenic Substrates	529
Immunological Methods	529
Molecular Methods Based on Genetic Signature of Target Pathogen	530
Polymerase Chain Reaction Technique and Quantitative PCR	530
Nanotechnology and its Promise	531
Metallic Nanoparticles	532
History	532
Detection Principle	533
Methodology	533
Synthesis of Gold Nanoparticles	533
Computation of ssDNA Sequences for Functionalization of Gold Nanoparticles	534
Functionalization of Gold Nanoparticles with Thiol-Modified DNA	534
Examples	534
Colorimetric Detection of DNA of Shiga Toxin Producing <i>Escherichia Coli</i> (Using Bio-Conjugated Gold Nanoparticles)	535
Colorimetric Detection of Enterotoxigenic <i>Escherichia coli</i> (ETEC) Gene Using Gold Nanoparticle Probes	535
Clinical Significance of Nanoparticle-Based Detection	536
Ethical Issues	536

Translational Significance	537
Future Approaches	537
World Wide Web Resources	537
References	538
Further Reading	539
Glossary	539
Abbreviations	539
Long Answer Questions	539
Short Answer Questions	539
Answers to Short Answer Questions	539

29. Biotechnological Exploitation of Marine Animals

Surajit Das

Summary	541
What You Can Expect to Know	541
History and Methods	542
Introduction	542
Marine Bioresources and Biotechnology	542
Historical Background	542
Biotechnologically Important Marine Animals	542
Genetic Engineering and its Application in Aquaculture*	545
Transgenic Fish	545
Methods of Gene Transfer	545
Chromosome Manipulation	545
Sex Reversal	548
Cryopreservation of Gametes	549
Marine Ornamental Fish Trade and Chromosomal Manipulation	549
Advances in Mariculture	550
Captive Rearing Technology	550
Feed Technology: Microencapsulated, Micro-Coated, and Bio-Encapsulated Feeds	550
Application of Nanotechnology in Aquaculture	550
Marine Genomics	551
Disease Diagnosis of Cultivable Animals	552
Immunodiagnosics	552
DNA-Based Diagnosis	554
Therapeutics from Marine Animals	554
Marine Natural Products of Animal Origin	554
Commercial Bio-Products from Marine Organisms	556
Green Fluorescent Protein from Jelly Fish and its Application	557
Ethical Issues	559
Translational Significance	559
Future Directions	559
World Wide Web Resources	560
References	560
Further Reading	561
Glossary	561

Abbreviations	562	Examples with Applications	588
Long Answer Questions	562	Ethical Issues	589
Short Answer Questions	562	Translational Significance	590
Answers to Short Answer Questions	562	World Wide Web Resources	591
		References	591
		Further Reading	592
		Abbreviations	592
		Glossary	592
		Long Answer Questions	593
		Short Answer Questions	593
		Answers to Short Answer Questions	593
30. Herbal Medicine and Biotechnology for the Benefit of Human Health		32. Ethical Issues in Animal Biotechnology	
<i>Priyanka Srivastava, Mithilesh Singh, Gautami Devi and Rakhi Chaturvedi</i>		<i>Abhik Gupta</i>	
Summary	563	Summary	597
What You Can Expect to Know	563	What You Can Expect to Know	597
History and Methods	563	History and Methods	598
Introduction	563	Introduction	598
Traditional Medicine	564	A Brief Overview of Ethical Thoughts and Principles	599
Ancient System of Medicine	565	Virtue Ethics	599
Methodology	565	Deontological (Duty-Based) Ethics	600
Investigation of Medicinal Plants	565	Consequentialist Ethics	600
Biotechnological Approaches for Herbal		Principles	600
Drug Production	569	Methodology	601
Organ Cultures	569	Application of Ethics in Animal Biotechnology	601
Callus Cultures	570	Ethical Concerns in Animal Biotechnology	602
Suspension Cultures	570	Intrinsic Concerns	602
Case Study: <i>Lantana camara</i> L.	570	Extrinsic Concerns	604
Opportunities and Challenges	571	Some Challenging Ethical Issues in Animal Biotechnology	607
Conclusions and Outlook	573	Chimeras	607
Ethical Issues	573	Animal Biopharming	608
Translational Significance	573	Constitution of Ethics Committees	610
World Wide Web Resources	574	Translational Significance	610
References	574	Human Therapeutic Cloning and Other Techniques in Animal Biotechnology	610
Further Reading	574	Conclusions	611
Glossary	574	World Wide Web Resources	611
Abbreviations	575	References	612
Long Answer Questions	575	Further Reading	612
Short Answer Questions	575	Glossary	612
Answers to Short Answer Questions	575	Abbreviations	613
		Long Answer Questions	613
		Short Answer Questions	613
		Answers to Short Answer Questions	613
31. Perspectives on the Human Genome		Index	615
<i>Aruna Kumar and Kailash C. Upadhyaya</i>			
Summary	577		
What You Can Expect to Know	577		
History and Methods	577		
Introduction	577		
Human Genome Sequencing Project	578		
History	578		
Human Genome: Organization and Perspective	579		
Complexity of Human Genome	579		
Gene Content	579		
Principle	586		
Methodology	587
