## 1. Pituitary Gland Development and Disease: From Stem Cell to Hormone Production 1

Shannon W. Davis, Buffy S. Ellsworth, María Inés Pérez Millan, Peter Gergics, Vanessa Schade, Nastaran Foyouzi, Michelle L. Brinkmeier, Amanda H. Mortensen, and Sally A. Camper

|                                                                                  |    |
|----------------------------------------------------------------------------------|----|
| 1. Introduction                                                                  | 2  |
| 2. Regulating the Pituitary Organizer and the Growth and Shape of Rathke's Pouch | 3  |
| 3. Activities of Signaling Pathways Intrinsic to Rathke's Pouch                  | 11 |
| 4. The Role of Signature Transcription Factors in Cell Specification             | 15 |
| 5. Early-Acting Transcription Factors                                            | 21 |
| 6. Emerging Roles for Additional Transcription Factor Families: The Forkheads    | 23 |
| 7. Pituitary Progenitors: Stem Cells and the Niche                               | 28 |
| 8. Cell Cycle Regulation                                                         | 29 |
| 9. Vascularization and the Hypophyseal Portal System                             | 33 |
| 10. Conclusion                                                                   | 34 |
| References                                                                       | 35 |

## 2. Development of the Medial Hypothalamus: Forming a Functional Hypothalamic-Neurohypophyseal Interface 49

Caroline Alayne Pearson and Marysia Placzek

|                                                        |    |
|--------------------------------------------------------|----|
| 1. Introduction                                        | 51 |
| 2. Architecture of the Adult Medial Hypothalamus       | 52 |
| 3. Establishing the Medial Hypothalamus                | 57 |
| 4. Signaling Ligands in Induction and Regionalization  | 60 |
| 5. Neuronal Differentiation in the Medial Hypothalamus | 65 |
| 6. Establishment of Interfaces                         | 71 |
| 7. Concluding Remarks                                  | 79 |
| Acknowledgments                                        | 80 |
| References                                             | 80 |

|                                                                                                                                                    |                |
|----------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>3. Mammalian Sex Determination and Gonad Development</b>                                                                                        | <b>89</b>      |
| Dagmar Wilhelm, Jennifer X. Yang, and Paul Thomas                                                                                                  |                |
| 1. Introduction                                                                                                                                    | 90             |
| 2. Development of the Bipotential Genital Ridge                                                                                                    | 90             |
| 3. Primordial Germ Cells                                                                                                                           | 94             |
| 4. Let Us Get It on: Activation of the Testis Differentiation Pathway                                                                              | 96             |
| 5. Staying Turned on: Activation and Maintenance of Sox9                                                                                           | 98             |
| 6. Ovary Differentiation                                                                                                                           | 105            |
| 7. Molecular Genetics of Ovarian Development                                                                                                       | 107            |
| 8. Mutual Antagonism                                                                                                                               | 109            |
| 9. Conclusions and Future Perspectives                                                                                                             | 110            |
