Preface	xv
Epigraphs	xvii

Part I Vertebrate Skeletal Tissues

1. Vertebrate Skeletal Tissues	3
Bone	5
Cartilage	5
Dentine	11
Enamel	11
Intermediate Tissues	13
Cementum	14
Enameloid	14
Chondroid and Chondroid Bone	14
Cartilage into Bone: Direct and Indirect Ossification	15
Notes	16
2. Bone	17
Discovery of the Basic Structure of Bone	17
Cellular Bone	19
Osteocytes	21
Sclerostin	21
Osteocyte Connections, Function and Maintenance	22
Intramembranous and Endochondral Bone	23
Embryonic Origins	23
Subperiosteal Ossification and Suppression of the Cartilage Phase	23
Metabolic Differences Between Bone Types	24
Morphogenetic Differences Between Bones	25
Osteones	26
Growth	28
Regional Remodelling	29
Ageing	29
Ageing at the Cellular Level	29
Ageing at Cellular and Tissue Levels	30
Ageing at the Organ Level	30

Ageing of the Skeletal System	30
Osteones Over Time	30
Acellular Bone	31
Caisson Disease and Abnormal Acellular Bone in Mammals	31
Acellular Bone in Teleost Fishes	32
Aspidine	39
Bone in Sharks and Rays (Cartilaginous Fishes)	39
Notes	40

3. Vertebrate Cartilages	43
Types	43
Chondrones	43
Cartilage Growth	46
Cartilage Canals	47
Secondary Centres of Ossification	48
Elastic Cartilage	49
Elastic Fibres	49
The Cells	49
Elastic Cartilage, Adipocytes and Intermediate Tissues	51
Shark Cartilage	52
Development and Mineralisation	52
Tesserae	53
Growth	54
Inhibition of Vascular Invasion	54
Lampreys	54
Mucocartilage	55
Lamprin	56
Mineralisation	57
Hagfish	57
Acellular Cartilage in a Freshwater Stingray	58
Notes	58

Part II Origins and Types of Skeletal Tissues

4. Invertebrate Cartilages, Notochordal Cartilage and Cartilage Origins	63
Chondroid and Cartilage	63
Odontophore Cartilage in Caenogastropods	64

Branchial (Gill Book) Cartilage in the Horseshoe Crab, <i>Limulus polyphemus</i>	65		
Cranial Cartilages in Squid, Cuttlefish and Octopuses	65		
Composition of the Extracellular Matrix	66		
Tentacular Cartilage in Polychaete Annelids	69		
Lophophore Cartilage in an Articulate Brachiopod, <i>Terebratalia Transversa</i>	69		
Mineralisation of Invertebrate Cartilages	69		
Cartilage Origins	74		
Hemichordates	74		
Notochordal Cartilage	76		
Notes	77		
5. Intermediate Tissues	79		
Scleroblasts	79		
Modulation and Intermediate Tissues	80		
Cartilage from Fibrous Tissue and Metaplasia	82		
Metaplasia of Epithelial Cells to Chondroblasts or Osteoblasts	83		
Chondroid	84		
Chondroid in Teleosts	84		
Chondroid in Mammals	86		
Chondroid Bone	87		
Chondroid Bone in Teleosts	87		
Chondroid Bone in Mammals	91		
Tissues Intermediate Between Bone and Dentine	92		
Dentine	92		
Cementum	94		
Enameloid: a Tissue Intermediate Between Dentine and Enamel	95		
Notes	96		
6. Lessons from Fossils	99		
Fossilised Skeletal Tissues	99		
All Four Skeletal Tissues Are Ancient	99		
A Family of Skeletal Tissues in Fossil Agnatha	102		
Dinosaur Bone, Dinosaur Growth and Life History	103		
Patterns of Ossification and Bone Growth	104		
Developing Skeletons in Fossils	105		
Patterns of Growth and Homeostasis	105		
Palaeopathology	106		
Conodonts	106		
What Are Conodonts?	107		
Conodont Elements as Teeth and Conodonts as Chordates	108		
Notes	109		
		Part III	
		Unusual Modes of Skeletogenesis	
		7. Horns and Ossicones	113
		Horns	113
		Distribution of Horns as Organs	114
		Bovidae	114
		Rhinos	115
		Titanotheres	118
		Pronghorn Antelopes	118
		Giraffes	118
		Horn as a Tissue	120
		Development and Growth of Horns	121
		Notes	122
		8. Antlers	123
		Antlers	123
		Combat and Dominance	123
		Size and Absence of Antlers	123
		Initiation of Antler Formation	124
		Pedicle Formation	124
		The Antler Bud and Dermal—Epidermal Interactions	126
		Hormonal Control of Pedicle Development and Growth	127
		Antler Replacement	127
		The Shedding Cycle	127
		Histogenesis of Antlers	129
		White-Tailed Deer, American Elk, European Fallow and Roe Deer	129
		Rocky Mountain Mule Deer	131
		Sika Deer	131
		Hormones, Photoperiod and Antler Growth	131
		Photoperiod and Testosterone	133
		Parathyroid Hormone and Calcitonin	134
		Notes	134
		9. Tendon Skeletogenesis and Sesamoids	137
		Tendons and Skeletogenesis	137
		Difficult Cases	138
		Fibrocartilage in Tendons	138
		Rodent Achilles Tendons	139
		Ossification of Avian Tendons	141
		Formation and Composition of Tendon Fibrocartilages	141
		Sesamoids	144
		Anuran Amphibians	145
		Reptiles	146
		Birds	146
		Notes	148

Part IV Stem and Progenitor Cells

10. Embryonic Stem and Progenitor Cells

Stem Cells	153
Set-Aside Cells	155
Periosteal Progenitor Cell for Periosteal Osteogenesis in Long Bones	157
Modulation of Synthetic Activity and Differentiative Pathways of Cell Populations	160
Fibroblast—Chondroblast Modulation	160
Modulation of Glycosaminoglycan Synthesis	160
Modulation of Synthetic Activity and Differentiative Pathways in Single Cells	161
Degradative Activity	161
Notes	164

11. Stem and Progenitor Cells in Adults

Fibroblast Colony-Forming Cells	167
Niches and Haemospheres	169
Osteogenic Precursor Cells	169
Clonal Analysis	170
Lineages of Cells	170
Dexamethasone, Osteogenesis and Chondrogenesis	170
Epithelial Induction of Ectopic Bone	172
Transitional Epithelium of the Urinary Bladder	172
Epithelial Cell Lines	173
Chondrogenic Precursor Cells	175
Conversion to Stem Cells	175
Mesenchymal Stem Cells	176
miRNAs	176
Neural Crest—Derived Stem Cells	177
Notes	177

Part V Skeletogenic Cells

12. Bipotential Osteochondroprogenitor Cells

Identifying Osteochondroprogenitor Cells	181
Excrable Terminology	182
Features	182
Cell Cycle Dynamics	182
Bipotential Progenitor Cells for Osteogenesis and Chondrogenesis	183

Bipotential Cell Populations or Bipotential Cells?	183
Uncovering Bipotentiality	183
Discovering Bipotentiality	184
Condylar Cartilage on the Condylar Process of the Mammalian Dentary	189
Histodifferentiation and Scurvy	189
One or Two Cell Populations	190
Evidence Against Bipotentiality	190
Evidence Supporting Bipotentiality	191
Homogeneous or Heterogeneous Cell Population?	193
Secondary Cartilage on Avian Membrane Bones	194
Notes	198

13. Dedifferentiation of Chondrocytes and Endochondral Ossification

The Fate of Hypertrophic Chondrocytes of the Condylar Cartilage	199
The Temporomandibular Joint	199
Hypertrophic Chondrocytes Survive	200
Hypertrophic Chondrocytes Transform to Osteoprogenitor Cells	200
Meckel's Cartilage	202
Fate of Meckel's Cartilage in Mammals	202
Middle Ear Ossicles	205
The Poster Child for Evolution	205
Fossil Evidence	206
Embryological Evidence	208
Homeobox Gene Control of Mandibular Skeletal Development	209
<i>Msx</i> and <i>Dlx</i> genes	209
<i>Prx1</i> , <i>Prx2</i>	209
<i>Alx3</i>	212
<i>Pitx1</i>	212
Dedifferentiation During Endochondral Bone Formation	213
Rodent Ribs	213
Appendicular Long Bones	215
Murine Interpubic Joints	216
Notes	218

14. Dedifferentiation and Stem Cells: Regeneration of Urodele Limbs and Mammalian Fingertips

Urodele Limb Regeneration	219
Dedifferentiation	220
Blastema Formation	221
More Than One Cell Fate	222
Myoblast and Chondroblast Fates	222

Innervation	223
Aneurogenic Limbs	224
Electrical Signals?	226
<i>Hox</i> Genes	226
<i>FgfR1</i> and <i>FgfR2</i>	227
Radical Fringe	227
Why Frogs Cannot Regenerate Their Limbs	227
Anuran and Urodele Regeneration	228
Augmenting Regeneration	231
Fingertips of Mice, Monkeys and Humans	231
Monkeys and Humans	231
Mice	232
Demineralised Bone Matrix and Skeletal Repair	233
The Approach	233
Cartilage Induction but Bone Formation	234
The Active Agent: Bmp	235
Carriers	236
Notes	236

15. Cells to Make and Cells to Break	239
Clasts and Blasts	239
Resorption of Bone	239
Proximity to Bone Matrix	240
Vacuolar Proton Pump (V-ATPase)	240
Osteoclasts <i>In Vitro</i>	240
Coupling Bone Resorption to Bone Formation	241
Coupling Osteoblasts and Osteoclasts	241
Parathyroid Hormone (PTH)	241
TGF β Signalling	242
Osteoprotegerin and RankL	242
Osteocalcin and Mechanical Stimulation	242
When Coupling Goes Awry	244
Osteoporosis	245
Statins	246
Trap-Staining for Osteoclasts	246
Mammalian Osteoclasts	246
Teleost Osteoclasts	246
Nitric Oxide: It's a Gas	247
Progenitor Cells for Osteoblasts and Osteoclasts	247
Japanese Quail: Domestic Fowl Chimeras	248
Osteopetrosis and Osteoclast Origins	250
IS The Lineage Macrophage $\rightarrow$ Phagocyte $\rightarrow$ Osteoclast or is it Monocyte $\rightarrow$ Osteoclast?	252
Phagocyte-Macrophage Origin	252
Evidence Against Monocytes	255
Evidence for Monocytes	255
Chondroclasts and Osteoclasts	255
Synovial Cells and Reportion of Articular Cartilage	256
Notes	256

Part VI Embryonic Origins

16. Skeletal Origins: Somitic Mesoderm, Vertebrae, Pectoral and Pelvic Girdles	261
Somitic Mesoderm and the Origin of the Vertebral Column	262
Paraxial Mesoderm $\rightarrow$ Somites	262
Sclerotome Formation, Migration and Vertebral Development	262
Origin of Teleost Vertebrae in the Notochordal Sheath	266
Resegmentation of Somites	268
Intervertebral Discs and Nucleus Pulposus	268
Somites Provide the Muscles for Limb Buds	269
Pectoral and Pelvic Girdles	271
Pectoral Girdle	271
The Clavicle: Even More Surprising	273
Clavicular Development in Humans	274
Other Mammals	274
Mammals That Lack Clavicles	275
Avian Clavicles	275
Notes	278
17. Skeletal Origins: Neural Crest Cells	281
Different Mesenchymes, Same Tissues	281
Neural Crest as a Source of Skeletal Cells	282
Evidence of Skeletogenic Potential	282
Ablation and Transplantation of Urodele Neural Crest	283
³ H-Thymidine-Labeling of Neural Crest Cells in Chicken Embryos	285
Quail-Chick Chimeras and the Avian Neural Crest	286
Dil-Labeling and Lungfish Neural Crest	291
Transgenic Labeling of Zebrafish Embryos	292
Transgenic Labeling of Mouse Embryos	292
Mutants and the Neural Crest	294
Regionalisation of the Cranial Neural Crest	294
Cranial and Trunk and Neural Crest	295
Turtle Shells	295
Chondrogenesis from Trunk Neural Crest Cells	295
From Skeletal Origins to Skeletal Initiation	297
Notes	297
18. Epithelial-Mesenchymal Interactions Initiate Skeletogenesis	299
Urodele Amphibians: Chondrogenesis	301
Avian Mandibles: Chondrogenesis and Osteogenesis	301
Meckel's Cartilage	302

Mandibular Bones	303
Maxillary Bones	306
Mammalian Mandibular Skeleton	307
Molecular Mechanisms	307
The <i>Dlx</i> and <i>Msx</i> Gene Families	
and Murine Craniofacial Development	308
Teleost Mandibular Arch Skeleton	311
Dlx Genes	312
Fgfs	312
<i>Hoxd4</i> and Retinoic Acid	312
Mutants	313
Lateral Line, Neuromasts and Dermal Bone	313
Hope from a Single Trout	313
Notes	315

Part VII Getting Started

19. The Membranous Skeleton: Condensations	319
The Membranous Skeleton	320
Characterising and Visualising Condensations	322
How Condensations Arise	325
Altered Mitotic Activity	325
Changing Cell Density	325
Aggregation and/or Failure to Disperse	326
Molecular Control	327
Establishing Boundaries of Condensations	329
Syndecan and Tenascin	329
Notes	330
20. From Condensation to Differentiation	333
Condensation Growth	333
Lessons from Mutants	334
Adhere, Proliferate and Grow	336
Additional Molecular Signals and Condensation	336
Condensation Position and Shape	339
Establishing Condensation Size	340
Bmps	340
Fibronectin	340
Chick Fore- and Hind Limb Buds	341
Hyaluronan	341
Persistence of Condensations	342
Hoxa2 and Incipient Condensations	342
From Condensation to Overt Differentiation	344
Bmps	344
Tenascin and NCam	344
Runx2	345
'Chondrogenic' Genes and Early Intramembranous Ossification?	347
Notes	348

21. Skulls, Eyes and Ears: Condensations and Tissue Interactions	349
The Skull	349
Avian Skull Development	350
Mammalian Skull Development	351
The Cartilaginous Skull	353
Type II Collagen	353
Otic, Optic and Nasal Capsules	353
The Otic Vesicle	354
Tympanic Cartilages	355
Scleral Cartilage	356
Chondrogenic Mesenchyme	356
Pigmented Retinal Epithelium	357
Scleral Ossicles	358
Teleosts	359
Ossicles in Domestic Chickens	
<i>Gallus domesticus</i>	359
Epithelial Scleral Papillae	360
Focal Epithelial-Mesenchymal Interactions	361
Notes	365

Part VIII Similarity and Diversity

22. Chondrocyte Diversity	369
Chondrocytes Segregate from Precursors	369
Formation of Perichondria	371
Morphogenetic Specificity of Cartilages	371
Cartilages of Different Embryological Origins	373
Chondrocyte Hypertrophy	374
Vascular Invasion	374
Type X Collagen	375
Type X Does Not Always Indicate Hypertrophy	377
Regulation of Chondrocyte Hypertrophy	377
Type X and Mineralisation	379
Matrix Vesicles	379
Hypertrophic Chondrocytes and Subperiosteal Ossification	381
<i>Brachypod (bp^H)</i> Mice	382
A Role for Wnts	385
Notes	385
23. Cartilage Diversity	387
Sternal Chondrocytes	387
Synthesis of Collagen and Glycosaminoglycan	387
Differential Expression of Type II Collagen	387
Differential Synthesis and Organisation of Collagen Types	387
Type X Collagen and Hypertrophy	388

Fibronectin	388	<i>HOXD12, HOXD13</i> and Polyphalangy	423
Nanomelia	388	Oestrogen-Stimulated Deposition	
Tumour Invasion	390	of Medullary Bone in Laying Hens	424
Vascularity	390	Oestrogen-Stimulated Resorption	
Resisting Vascular Invasion	391	of Pelvic Bones in Mice	425
Inhibitors of Angiogenesis and Vascular		Notes	425
Invasion	393		
Vascular Endothelial Growth Factor	394		
PTH-PTHrP	395		
Intepubic Joints and the Transformation			
of Cartilage to Ligament	395		
Cartilage → Ligament	395		
Mediation by Oestrogen and Relaxin	398		
Modulation	399		
Notes	400		
24. Osteoblast and Osteocyte Diversity			
and Osteogenesis <i>In Vitro</i>	401		
Bone Proteins	401		
Osteocalcin	401		
Osteopontin	402		
Osteonectin	402		
Osteocytic Osteolysis	403		
Hibernation	404		
Initiating Osteogenesis <i>In Vitro</i> from			
Embryonic Mesenchyme	404		
Osteogenic Cells <i>In Vitro</i>	405		
Folded Periosteal and Mass Cultures	407		
Establishing Isolated Osteoblasts and			
Initiating Osteogenesis <i>In Vitro</i>	407		
Clonal Cultures	411		
Notes	412		
25. Diversity of Bone as a Tissue			
and as an Organ	415		
Heterogeneity of Response to Sodium			
Fluoride	415		
Enhanced Cell Proliferation and Initiation of			
Osteogenesis	415		
Interaction with Hormonal Action	417		
Osteoporosis	417		
Chondrogenesis	417		
Mineralisation	417		
Mechanical Properties of Bone	417		
Alveolar Bone of Mammalian Teeth	417		
Developmental Origin	417		
Physiology and Circadian Rhythms	420		
Penile and Clitoral Cartilages and Bones	421		
Os Penis	422		
Os Clitoridis	422		
Hormonal Control	422		
Digits and Penile Bones	423		
		Part IX	
		Maintaining Cartilage in Good Times	
		and in Bad	
		26. Maintaining Differentiated	
		Chondrocytes Through Cell-Matrix	
		Interactions	429
		Differentiated Chondrocytes	429
		Synthesis and Deposition of Cartilaginous	
		ECM	429
		Synthesis of CS	430
		Synthesis of Type II Collagen	430
		Synthesis of Collagen and CS by the Same	
		Chondrocyte	431
		Collagen Gel Culture	431
		Feedback Control of the Synthesis	
		of Glycosaminoglycans	431
		Evidence from Organ Culture	431
		Evidence from Chondrocyte Cell Cultures	
		and from a Mouse Mutant	432
		Interactions Between Glycosaminoglycans	
		and Collagens Within the ECM	432
		Synthesis of Collagen and CS Are Regulated	
		Independently	433
		Hypertrophy	433
		The Interactive ECM	434
		Notes	435
		27. Maintenance Awry —	
		Chondrodysplasias and	
		Achondroplasia	437
		Achondroplasia	437
		Ageing of Cartilage <i>In Vivo</i>	437
		Genetic Disorders of Collagen Metabolism	439
		Cartilage Anomaly (<i>Can</i>) Mice	439
		Achondroplasia (<i>ac/ac</i>) in Rabbits	440
		Achondroplasia (<i>cn/cn</i>) in Mice	441
		Achondroplasia in Humans: FGFR3	441
		Fgf18	441
		Chondrodysplasia (<i>Cho</i>) in Mice	442
		Sprouty Mice	442
		Brachymorphic (<i>bm</i>) Mice	443
		Nanomelia (<i>nm</i>) Domestic Fowl	444

Induced Micromelia	445	Skeletal Responses Mediated by cAMP	483
Metabolic Regulation and Stability of Differentiation	445	Matrix Synthesis and Condensation	484
Notes	446	Hormones	484
28. Restarting Mammalian Articular Chondrocytes	449	cAMP and Prechondroblast Proliferation	484
Mammalian Articular Chondrocytes <i>In Vitro</i>	449	Long Bones in Chick Embryos	484
A Role for Oxygen	450	Mammalian Condylar Cartilage	485
Responsiveness to Environmental Signals	452	Notes	486
Mechanisms of Articular Cartilage Repair	456	31. Growth and Morphogenesis of Long Bones	487
Dividing Again <i>In Vitro</i>	456	Fundamental Form	487
Dividing Again <i>In Vivo</i>	459	Polarised Secretion	488
Notes	460	Long-Bone Growth	488
29. Repair of Fractured Long Bones and Regeneration of Growth Plates	463	Growth Plates	491
A Brief History of Fracture Repair	463	Growth-Plate Dynamics	493
Source of the Cells for Repair	463	Growth at Opposite Ends of Long Bones	497
Standardising the Fracture	464	Diurnal and Circadian Rhythms	498
Motion	464	Rhythms Are Under Hormonal Control	498
Nonunions and Persistent Nonunions	465	The Periosteum and Regulation of the Growth Plate	498
Growth Factors and Fracture Repair	467	Pig Mandibular Periosteal	499
Bmps	469	Periosteal of Long Bones of Japanese Quail	500
Jump-Starting Repair	469	Periosteal Sectioning	500
Regeneration of Growth Plates in Rats, Opossums and Humans	470	Feedback Control	501
Notes	471	Notes	502
Part X		32. Long Bone Growth: A Case of Crying Wolff?	503
Growing Together and Growing Apart		Wolff, Von Meyer or Roux	503
30. Initiating Skeletal Growth	475	Response to Pressure	505
What Is Growth?	475	Continuous or Intermittent	
Numbers of Stem Cells	475	Mechanical Stimuli	505
Cell Movement and Cell Viability	476	Scaling and Variation: When Wolff Meets the Dwarfs	506
Epithelia, Fgf/FgfR2 and Mesenchymal Cell Proliferation	477	Rats as Scaled-up Mice	506
Metabolic Regulation	477	Gravity	508
Creeper (<i>cp</i>) Fowl	477	Prolonged Bed Rest	509
Tibia/Fibula	477	Transduction of Mechanical Stimuli	509
Growth Retardation	480	Notes	510
A Growth Inhibitor	480	Part XI	
Mechanical Stimulation and Chondroblast Differentiation and Growth	480	Staying Apart	
Mechanical Stimuli and Metabolic Activity	481	33. The Temporomandibular Joint and Cranial Synchondroses	515
Transduction of Mechanical Signals	482	MAMMALIAN TEMPOROMANDIBULAR JOINTS	515
Cellular Tensegrity	483	Mechanical Forces	516
Membrane Potential	483	Diet	519
		Other Functional Approaches and the Functional Matrix	519

Cranial Synchronoses	521
As Pacemakers	521
Limited Growth Potential	525
As Adaptive	526
Notes	526

34. Sutures and Craniosynostosis	529
Sutural Growth as Secondary and Adaptive	529
Working with the Functional Matrix	534
Sutural Cartilage	534
The Dura	536
Craniosynostosis	537
<i>Msx2</i> and <i>Ameloblastin</i>	538
Fgf Receptors	539
Sutural Growth	539
Sutural Fusion	539
Twist and Periostin	540
Notes	541

Part XII Limb Buds

35. The Mesodermal Limb Field and the Apical Epithelial Ridge	545
Introduction	545
The Mesodermal Limb Field and Limb Bud Mesenchyme	545
Regulation	547
Ectodermal/Epithelial Responsiveness	550
Limb Field Mesoderm/Limb Bud Mesenchyme Specifies Limb Identity as Fore- or Hind Limb	550
Molecular Specification of Fore- and Hind Limbs	551
Positioning Paired Appendages	551
Specification of Fore- and Hind Limbs	552
Roles for the Epithelium Associated with the Limb Field	554
Limb-Bud Growth	554
Proximo-Distal Patterning of the Limb Skeleton	556
Limb Bud Mesenchyme Maintains the AER	556
Apical Epidermal Maintenance Factor (AEMF)	556
The Posterior Necrotic Zone (PNZ)	557
Specificity of Limb-Bud Epithelium	558
Distal and Proximal Limb Bud Mesenchyme	559
A Mechanical Role for the Epithelium?	560
Notes	561

36. Adding or Deleting an Apical Epithelial Ridge	563
Regeneration of the Apical Epithelial Ridge	563
Experimental Removal of the Apical Epithelial Ridge	564
Failure to Maintain an AER: <i>Wingless (wl)</i> Mutants	565
Mutual Interaction and Molecular Bases	566
Experimental Addition of an AER	567
Mutants with Duplicated Limbs	567
An Enlarged AER	568
Duplicating the AER	568
Narrow or Subdivided AERs	571
Polyphalangy and Extra Joints	571
Polyphalangy as Normal Phenotype	571
Polyphalangy as Variant Phenotype	572
Paraphalanges	573
Notes	574

37. Limb Buds in Limbed and Limbless Tetrapods 577

Apical Epithelial Ridges Across the Tetrapods	577
Anuran Amphibians	577
Reptiles	578
Mammals	578
Limbless Tetrapods	580
Evolutionary Patterns	580
Gaining Limbs Back: Reevolution of Limbs	581
Amphisbaenians (Worm Lizards)	581
Ecological Correlates of Limblessness	582
The Developmental Basis of Limblessness in Snakes and Legless Lizards	584
Inability to Maintain an AER	585
Notes	586

Part XIII Limbs and Limb Skeletons

38. Axes and Polarity of Limb Buds and Limbs	591
Establishing Axes and Polarity	591
The A-P Axis and the ZPA	591
A Role for <i>Fgf2</i>	593
<i>dHand</i> and <i>Shh</i>	593
Wnts and <i>Fgf5</i> , 8 and 10	594
D-V Polarity	595
P-D Polarity and the Progress Zone	595
Early Specification Versus a Progress Zone	595
P-D Polarity and Amphibian Limb Regeneration	596

Connecting D–V and P–D Polarity	596	Morphogenesis	634
Thalidomide and Limb Defects	597	Spinal Ganglia and Vertebral	
Time of Action	598	Morphogenesis	636
Mode of Action	599	Chondrogenesis <i>In Vitro</i>	636
Notes	600	Spontaneous Chondrogenesis?	637
		Cell Division and Cell Death	639
		Notes	639
39. Patterning and Shaping Limb Buds and Limb Skeletons	601		
Morphogenesis and Growth	601	42. Relationships Between Notochord and Vertebral Cartilage	641
Apoptosis	601		
Posterior and Anterior Necrotic Zones (PNZ, ANZ)	602	Integrity of Notochord/Spinal Cord and Vertebral Morphogenesis	641
Interdigital Apoptosis	603	For How Long Do Notochord and Spinal Cord Interact with Sclerotomal Mesenchyme?	642
Interdigital Apoptosis in Limb Buds of Mouse Embryos	604	Can Cartilage Form from Dermomyotome or from Lateral-Plate Mesoderm?	642
The Opaque Patch	606	The Search for the Magic Bullet	643
Cell Adhesion, Morphogenesis and Growth: <i>talpid</i> (<i>ta</i>) Mutant Fowl	606	Cartilage Cells as Cartilage Inducers	645
<i>talpid</i> ² (<i>ta</i> ²)	606	Chondrocyte Extracellular Matrix	645
<i>talpid</i> ³ (<i>ta</i> ³)	607	Notochord and Spinal Cord Extracellular Matrices	646
Notes	609	Functions of Notochord and Spinal Cord Matrix Products	648
40. Before Limbs There Were Fins	611	The Magic Bullets	649
FINS AS PAIRED AND UNPAIRED APPENDAGES	611	<i>Pax1</i> and <i>Pax9</i>	649
Median Unpaired Fins in Teleost Fish	611	Shh	649
Lifestyle and Median Fins	612	<i>Bmp4</i> , <i>Msx1</i> and <i>Msx2</i>	650
Developmental Origins of Median Fins: Mesodermal or Neural Crest?	614	Conclusions on Initiation of Vertebral Chondrogenesis	650
Evolutionary Origins of Median Fins	615	Notochord as a Type of Cartilage	650
Paired Fins	616	A Transformational Series	651
Three Pairs of Paired Fins	617	Similar Kinds	651
Development of Paired Fins	618	Notochord Structure	651
Fin Buds and Fin Folds	618	Notochord, Chordoid and Chondroid	652
Skeletons of Paired Fins	619	Notochord and Cartilage	652
Retinoic Acid and Regeneration	624	Notes	655
A Retinoic Acid–Shh Link	624		
More on Fin Regeneration	624	43. Tail Buds, Tails and Taillessness	657
Pelvic Fin Loss	625		
Fins into Limbs	626	What Is a Tail?	657
Structure and Function	626	Tail Buds	657
Extant Phylogenetic Bracketing	626	The Ventral Epithelial Ridge	659
From Many to Fewer Digits	627	Tbx Genes	660
Notes	628	Tail Growth	661
		Genes and Environment	661
		Temperature	663
		Temperature-Induced Change in Vertebral Number: Meristic Variation	664
		Natural Variation and Adaptive Value of Vertebral Number	664
		Studies with Teleost Fish	665
		Studies with Chick Embryos	666
Part XIV			
Backbones and Tails			
41. Vertebral Chondrogenesis: Cell Differentiation and Morphogenesis	633		
Self-Differentiation or Induction?	633		

Studies with Mammals	666	Coupling and Uncoupling Dermal and	
Temperature Plus...	666	Endochondral Ossification	687
Taillessness	667	Heterochrony and Primate Skeletal Evolution	688
And Thereby Hangs a Tail	667	Notes	691
Fish Tails	668		
Lizards' Tails: Autotomy	669		
Notes	670		
Part XV		45. Variation Outside the Norm:	
Evolutionary Skeletal Biology		Neomorphs and Atavisms	693
44. Variation and Variability	673	Neomorphs	693
Variation and Variability	673	Origin of the Term/Concept	693
Variation in a Single Character	674	Mode of Development and Phylogenetic	
Variability and Constraint	674	Retention	693
Hypotheses Tested by the Study of		Furculae in Birds	694
Variation and Variability	676	The Preglossale of the Common Pigeon	694
Vestigial Digits Enhance Variation	676	Secondary Jaw Articulations in Birds	694
Variability and Variation Varies by Skeletal		A Boid Intramaxillary Joint	695
System	676	Regenerated Joints	695
Diet and Altitude Influence Skull		Neomorphs or Vestiges	696
Variation	676	Limb Rudiments in Mysticete Whales	696
Shared Developmental Change Results in		Levels of Analysis and Identification	
Convergent Variation	677	of Neomorphic Features	697
Pattern Variation in Limbs, Caudal Fins,		Digits	697
Beaks and Jaws	677	Turtle Shells	698
Limbs	677	Novel Modes of Ossification: Osteoderms	701
Caudal Fins	678	Osteoderms in Reptiles	701
Beaks of Darwin's Finches and Jaws		Osteoderms in Xenarthrans	703
of Cichlid Fishes	678	Atavisms	704
Metamorphosis	680	Taxic Atavisms	705
Miniaturisation as a Source of Variation	680	Neomorph or Atavism?	705
Urodele and Anuran Amphibians	681	Homeotic Genes/Transformation and	
Teleost Fish	682	Variation Outside the Norm	705
Heterochrony	683	Hox Genes	705
Heterochrony as Concept	683	Homeotic Transformation of Vertebrae	706
Positive Allometry	684	Notes	707
Heterochrony as Process	684	References	709
