Contributors	xi
Preface	xiii
CHAPTER 1 Computational Intelligence in the Design of Synthetic Microbial Genetic Systems.....	1
Jennifer S. Hallinan	
1. Introduction.....	1
2. Computational Infrastructure for Synthetic Biology.....	2
2.1. Biological Parts.....	2
2.2. Circuit Design and Simulation.....	3
2.3. Exploring Design Space.....	8
3. Computational Intelligence.....	9
3.1. Evolutionary Algorithms.....	10
3.2. Other CI Techniques.....	23
4. Discussion.....	27
References.....	29
CHAPTER 2 Constraints in the Design of the Synthetic Bacterial Chassis.....	39
Antoine Danchin, Agnieszka Sekowska	
1. Introduction.....	39
2. Top-Down Versus Bottom-Up Framing.....	40
3. An Unlimited List of Functions (Organised Starting from the Cell's Structure).....	43
3.1. Compartmentalisation and Shaping: the Cell's Casing.....	43
3.2. Information Transfer.....	47
3.3. Metabolism.....	55
4. Perspective: The Fourth Dimension (When Time Measures and Shapes).....	57
Acknowledgements.....	59
References.....	59
CHAPTER 3 Social Dimensions of Microbial Synthetic Biology.....	69
Jane Calvert, Emma Frow	
1. Introduction: Making Space for a New Discussion.....	69
2. From Implications to Dimensions.....	70
2.1. Metaphors and Analogies.....	71
3. From Speculation to Anticipation.....	72

4. From Public Acceptance to Public Good.....	75
4.1. Synthetic Biology for a Particular Purpose—the Arsenic Biosensor.....	77
4.2. The Public Good.....	79
5. From Regulation to Governance	80
5.1. Responsible Research and Innovation	81
6. Conclusions	82
References.....	83

CHAPTER 4 *Bacillus subtilis*: Model Gram-Positive Synthetic Biology Chassis.....

87

Colin R. Harwood, Susanne Pohl, Wendy Smith,
Anil Wipat

1. Introduction.....	87
2. The <i>B. subtilis</i> Genome	88
2.1. General Features	88
2.2. Genome Annotation.....	89
3. Genome Management and Analysis of Gene Function.....	89
3.1. Gene Transfer and Recombination.....	89
3.2. Transformation.....	90
3.3. Conjugation.....	91
3.4. Plasmid-Based Vector Systems.....	91
3.5. Special-Purpose Vectors.....	92
3.6. Expression Vectors	101
3.7. Genome Minimalisation	102
4. Analysis of the Transcriptome	102
4.1. Transcription and Transcription Profiling.....	102
4.2. Sigma Factors	103
4.3. Transcription Termination.....	104
4.4. Reporter Gene Technology	104
4.5. Reporter Gene Libraries/Live Cell Arrays.....	104
4.6. Analysis of Populations and Single Cells.....	105
5. Analysis of the Proteome.....	105
6. Analysis of the Metabolome.....	106
7. Parts, Devices, Systems and Applications	107
7.1. Parts, Systems and Devices.....	107
7.2. Engineering Genomes with <i>B. Subtilis</i>	108
7.3. Biosensors	108
8. Computational Tools and Resources.....	109

9. Summary	111
References	111
CHAPTER 5 Engineering Microbial Biosensors	119
Lisa Goers, Nicolas Kylilis, Marios Tomazou,	
Ke Yan Wen, Paul Freemont, Karen Polizzi	
1. Introduction	119
2. Areas of Application	120
2.1. What to Target?	121
2.2. Finding Potential Sensors	122
3. Types of Biosensors	122
3.1. Response Characteristics	124
4. Reporters	128
4.1. Fluorescence	128
4.2. Bioluminescence	128
4.3. Colour Change	128
5. Biosensors and Synthetic Biology	129
6. Transcription-Based Biosensors	129
6.1. Planning the Construct	129
6.2. Assembling the Construct	131
6.3. Testing the Construct	132
7. Translation-Based Biosensors	134
7.1. Planning the Construct	135
7.2. Riboswitch Construction Guidelines	136
8. Posttranslational Biosensors	139
8.1. Planning the Construct	139
8.2. Assembling the Construct	140
8.3. Testing the Construct	141
9. <i>In Vitro</i> Biosensors	141
10. Modelling Biosensors	143
10.1. What is a Model and How to Plan the Modelling Process	143
10.2. Constructing the Model	145
10.3. Model Reduction	147
10.4. Identifying the Starting Conditions and Parameter Values	148
10.5. Making Use of the Model—Numerical Simulations	149
10.6. Validating the Model and Reiterating the Modelling Procedure	150
11. Outlook	152
References	153

CHAPTER 6	Noise and Stochasticity in Gene Expression: A Pathogenic Fate Determinant.....	157
	Mikkel Girke Jørgensen, Renske van Raaphorst, Jan-Willem Veening	
1.	Introduction.....	157
2.	Origins of Noise.....	158
2.1.	Transcriptional Bursting.....	158
3.	Measuring Noise.....	160
4.	Engineering Noise.....	162
5.	Noise and Heterogeneity in Gene Expression.....	164
6.	Bistable Expression of Pneumococcal Pili.....	165
7.	Cooperative Virulence in <i>Salmonella enterica</i> S. Typhimurium.....	168
8.	Concluding Remarks.....	170
	References.....	171
CHAPTER 7	Platforms for Genetic Design Automation.....	177
	Chris J. Myers	
1.	Introduction.....	177
2.	Standards.....	179
2.1.	Systems Biology Markup Language.....	179
2.2.	Synthetic Biology Open Language.....	180
3.	Repositories.....	181
3.1.	BioModels Database.....	182
3.2.	GenBank.....	182
3.3.	Registry of Standard Biological Parts (iGEM Registry).....	183
3.4.	Standard Biological Parts Knowledgebase.....	184
3.5.	BioFab.....	184
3.6.	BacilloBricks.....	186
3.7.	Inventory of Composable Elements.....	187
4.	GDA Software Tools.....	187
4.1.	BioJADE.....	188
4.2.	GenoCAD.....	188
4.3.	TinkerCell.....	189
4.4.	Process Modelling Tool.....	190
4.5.	Synthetic Biology Software Suite.....	190
4.6.	Synthetic Biology Reusable Optimization Methodology.....	190
4.7.	Genetic Engineering of Cells.....	192
4.8.	Kera.....	194

4.9. Intelligent Biological Simulator.....	194
4.10. Sequence Editors and Optimizers	195
4.11. Tool Chains.....	197
5. Discussion	198
Acknowledgements.....	200
References.....	200
Index.....	203
