List of contributors	xi
Preface	xv
1 Sertoli cell anatomy and cytoskeleton	1
<i>Rex A. Hess and A. Wayne Vogl</i>	
I. Introduction	1
II. Sertoli cell morphology	4
III. Sertoli cell cytoskeleton	17
IV. Concluding remarks	30
References	31
2 Establishment of fetal Sertoli cells and their role in testis morphogenesis	57
<i>Humphrey Hung-Chang Yao, Erica Ungewitter, Heather Franco and Blanche Capel</i>	
I. Introduction	57
II. Establishment of the gonadal primordium	58
III. Sertoli cell specification and diversion of molecular development toward the testis pathway	60
IV. Organizational functions of fetal Sertoli cells	63
Summary	71
References	71
3 Early postnatal interactions between Sertoli and germ cells	81
<i>Qi-En Yang and Jon M. Oatley</i>	
I. Introduction	81
II. Neonatal testis development	82
III. Role of Sertoli cells in gonocyte proliferation and migration	85
IV. Role of Sertoli cells in formation of primary undifferentiated and differentiating spermatogonial populations	89
V. Concluding remarks	92
References	92
4 The spermatogonial stem cell niche in mammals	99
<i>Dirk G. de Rooij</i>	
I. Research advances related to the mammalian SSC niche since 2003	99
II. Principles of stem cell niches in mammalian tissues	99

III. Spermatogonial stem cells	100
IV. Location of the SSC	101
V. Factors governing SSC self-renewal and differentiation	104
VI. The environment inside and outside the niche	108
VII. The role of cell migration in SSC self-renewal and differentiation	109
VIII. Spermatogonial differentiation	110
IX. Niche localization: what controls the controller?	111
X. The SSC niche and the cycle of the seminiferous epithelium	111
XI. The SSC niche during cell loss	112
XII. Perspectives	113
Acknowledgments	114
References	114
5 DMRT1 and the road to masculinity	123
<i>Leslie L. Heckert and Valentine A. Agbor</i>	
I. Introduction	123
II. DMRT1 expression	124
III. Regulation of DMRT1	129
IV. DMRT1 locus and gene expression	133
V. DMRT1 function	142
VI. Conclusions	158
References	160
6 Hormonal regulation of spermatogenesis through Sertoli cells by androgens and estrogens	175
<i>Lee B. Smith, William H. Walker and Liza O'Donnell</i>	
I. Introduction	175
II. Androgen signaling	176
III. Testosterone production and action	178
IV. Androgen receptor	179
V. The role of androgens in Sertoli cells	182
VI. AR-dependent gene expression in Sertoli cells	187
VII. Sertoli cell estrogen signaling (from androgens via aromatase)	189
VIII. Conclusions and future perspectives	190
References	192
7 Activins and inhibins in Sertoli cell biology: implications for testis development and function	201
<i>Kate L. Loveland and Mark P. Hedger</i>	
I. Introduction: activin and inhibin link multiple cell types to determine male reproductive health	201
II. General structure and signaling pathways	202
III. Regulation of inhibin and activin production	204
IV. Activin and inhibin function in the adult testis	207
V. Activin and inhibin in the developing testis	212

VI. The contribution of Smads to regulation of testis development and growth	216
VII. Clinical relevance of activin and inhibin for male reproduction	218
VIII. Concluding remarks: the need to understand signaling crosstalk in the testis	220
Acknowledgments	221
References	221
8 The initiation of spermatogenesis and the cycle of the seminiferous epithelium	233
<i>Michael D. Griswold</i>	
I. Introduction and highlights since the last volume	233
II. Differentiation of spermatogonia	233
III. Evidence that RA is required for the initiation of meiosis	235
IV. The initiation of asynchronous spermatogenesis by RA	236
V. Regulation of RA synthesis and degradation in the developing testis	238
VI. Extrinsic versus intrinsic factors	242
References	242
9 Retinoic acid metabolism, signaling, and function in the adult testis	247
<i>Cathryn Hogarth</i>	
I. Introduction	247
II. RA synthesis, signaling, and degradation	247
III. Components of the RA pathway within the adult testis	250
IV. Maintenance of the spermatogenic cycle by RA	255
V. Sertoli cell contributions to RA function within the adult testis	257
VI. The effects of retinoids on Sertoli cell function	261
VII. Conclusions and remaining questions	264
References	266
10 Stage-specific gene expression by Sertoli cells	273
<i>William W. Wright</i>	
I. Introduction	273
II. Evidence that spermatogenic cells regulate biologically important, stage-specific functions of Sertoli cells	275
III. CTSL, a model for the analysis of the function and regulation of stage-specific gene expression	276
IV. Stage-specific gene expression as a fundamental characteristic of Sertoli cells	280
V. Future directions	300
Acknowledgments	300
References	300

15 Gene knockouts that affect Sertoli cell function	437
<i>Wei Yan</i>	
I. Introduction	437
II. Genes identified as essential for normal Sertoli cell development and function through KO studies	442
III. Lessons learned from the gene KO studies	453
IV. Approaches to gene ablation in Sertoli cells	457
V. Conclusions and perspectives	459
Acknowledgments	460
References	460
