Preface	xvii
About the Editors	xix

1. Natural History and Ecology of Bark Beetles

Kenneth F. Raffa, Jean-Claude Grégoire, and B. Staffan Lindgren

1. Introduction	1
2. Diversity of Lifestyles and Ecological Relationships	1
2.1 General Life Cycle	2
2.2 Variations to the Generalized Life Cycle	2
2.3 Variation in Ecological Impacts of Bark Beetles: from Decomposers to Landscape Engineers, and from Saprophages to Major Selective Agents on Tree Survival	5
2.4 Major Groups	5
3. Interactions with Host Plants	5
3.1 Host location and Selection	5
3.2 Host Defenses	6
3.3 Host Substrate Quality	8
3.4 Roles of Symbionts in Host Plant Utilization	9
3.5 Resource Partitioning	10
4. Communication	11
4.1 Functions and Roles	11
4.2 Chemicals	13
4.3 Acoustics	13
4.4 Intraspecific Variation	13
5. Tritrophic Interactions	15
5.1 Major Predators, Parasitoids, Pathogens and their Life Histories	15
5.2 Relative Importance of Natural Enemies to Bark Beetle Ecology	18
5.3 Competitors	19
5.4 Tritrophic Signaling	19

6. Population Dynamics	19
6.1 Diversity in Bark Beetle Population Dynamics	19
6.2 Factors Affecting Survival, Development, and Reproduction: Sources of Positive and Negative Feedback behind Bimodality	20
6.3 Transitions from Endemic to Eruptive Dynamics	23
7. Roles in Ecological Processes and Socioeconomic Impacts	25
7.1 Ecological Processes	25
7.2 Socioeconomic Impacts	25
7.3 Invasive Species	26
8. Conclusions	27
Acknowledgments	28
References	28

2. Morphology, Taxonomy, and Phylogenetics of Bark Beetles

Jiri Hulcr, Thomas H. Atkinson, Anthony I. Cognato, Bjarte H. Jordal, and Duane D. McKenna

1. Introduction	41
1.1 Historical Development and Current Status of the Field	41
1.2 Development of Taxonomy	41
1.3 Development of Classification	44
2. Current Approaches and Status of the Field	45
2.1 Morphological Approaches	45
2.2 Molecular Approaches: DNA Sequences in Phylogenetic Analyses	46
2.3 Species Delimitation, Population Genetics, and Phylogeography	50
2.4 Pheromones and Ecology Corroborate Species Limits	53
2.5 Fossil Bark Beetles	53
2.6 Timing of Bark Beetle Origin and Evolution	56
2.7 Methods in Bark Beetle Identification	57
3. Bark Beetle Morphology	57
3.1 Morphological Characteristics and Variation	57
3.2 Images of Morphology	64

4. Current Scolytine and Platypodine Classification	65	6. Intracellular Bacteria and Bark Beetle Evolution	130
4.1 Where do Bark Beetles Belong?	65	7. Conclusion	131
4.2 Internal Phylogenetic Relationships	68	7.1 Mating System Evolution	131
4.3 A Checklist of all Currently Recognized Genera	68	7.2 Sexual Selection	131
5. Conclusion: Unresolved Issues	70	7.3 Inbreeding	132
5.1 Scolytinae are Definitely a Subfamily of Weevils, but What about Platypodinae?	70	7.4 Social Evolution	132
5.2 How many Species are There?	80	Appendix	132
5.3 Unsettled Terminology	80	Acknowledgments	142
References	81	References	142
 3. Evolution and Diversity of Bark and Ambrosia Beetles	85	 4. Population Dynamics of Bark Beetles	157
<i>Lawrence R. Kirkendall, Peter H.W. Biedermann, and Bjarte H. Jordal</i>		<i>Aaron S. Weed, Matthew P. Ayres, and Barbara J. Bentz</i>	
1. Introduction	85	1. Introduction	157
1.1 Topics and Taxonomic Coverage	85	2. Concepts in Population Dynamics	157
1.2 Why We include Platypodinae	87	2.1 Population Growth	157
2. What are Bark and Ambrosia Beetles?	87	2.2 Feedbacks and Exogenous Effects	158
2.1 Phylogenetics	87	2.3 Stability	158
2.2 General Morphology	88	3. Host Use and Pest Ecology of Bark Beetles	159
2.3 Sexual Dimorphism	91	3.1 Seed-feeding Species	159
3. Evolutionary Ecology of Feeding	92	3.2 Tree Infesting Species	159
3.1 Phloeophagy (Breeding in Inner Bark)	94	3.3 Other Guilds	160
3.2 Xylomycetophagy (Ambrosia Beetles)	97	4. Ecology of Tree-Infesting Bark Beetles	161
3.3 Xylophagy (Breeding in Wood)	99	4.1 Life History Strategies	161
3.4 Herbiphagy	99	4.2 Host Plant Resistance to Bark Beetles	161
3.5 Myelophagy (Pith Breeders)	101	4.3 Life History Traits Affecting Aggression	162
3.6 Spermatophagy (Seed Breeders)	101	5. Fixed, Stable Points, Transient Dynamics, and Bark Beetle Aggression	165
3.7 Mycophagy (Fungus Feeders)	102	5.1 Life History Traits, Abundance, and Bark Beetle Aggression	166
3.8 Breeding in Monocots	102	5.2 Population Systems Regulated at One Equilibrium	166
3.9 Breeding in Live Hosts	103	5.3 Aggressive Species Exist at Low and High Abundance (Alternate Attractors)	168
4. Evolutionary Ecology of Reproductive Behavior	107	6. Conclusions	170
4.1 Mating Behavior	107	References	171
4.2 Mating Systems	109	 5. Conifer Defense and Resistance to Bark Beetles	177
4.3 Gallery System Form	117	<i>Paal Krokene</i>	
5. Social Evolution	119	1. Introduction	177
5.1 Social Behaviors and Ecology of Bark and Ambrosia Beetles: an Overview	119	1.1 Bark Beetles, Symbionts, and Tree Defenses	177
5.2 Basic Concepts of Social Evolution Theory	120	1.2 The Bark Beetle Life Cycle, Tree Colonization, and Mass Attack	179
5.3 Subsociality and Parental Care in Bark and Ambrosia Beetles	120	1.3 Conifers and their Defenses	179
5.4 Delayed Dispersal and Alloparental Care	125		
5.5 Larval Cooperation	127		
5.6 The Evolution of Reproductive Altruism	128		

2. Anatomical and Chemical Components of Conifer Defenses	181	5. Mites	216
2.1 Anatomical Layout of Conifer Defenses	181	5.1 Biodiversity of Mites	216
2.2 Chemical Traits of Conifer Defenses	186	5.2 Ecology of Mites	217
3. Preformed and Induced Conifer Defenses	189	5.3 Impacts on Bark Beetle Biology and Population Dynamics	219
3.1 Preformed Defenses	190	6. Nematodes	233
3.2 Induced Defenses	192	6.1 Biodiversity of Nematodes	233
3.3 Relative Importance of Preformed vs. Induced Defenses	196	6.2 Ecology of Nematodes	233
3.4 Conifer Defenses as a Regulator of Bark Beetle Outbreaks	197	6.3 General Life History/Cycle of Nematode Parasites	235
4. Failure of Conifer Defenses	198	6.4 Impacts on Bark Beetle Biology and Population Dynamics	236
4.1 Contributions of Bark Beetles to Tree Death	198	7. Viruses	236
4.2 Contributions of Symbionts to Tree Death and the Case for the Beetle-Symbiont Complex	199	8. Other Arthropod Symbionts	237
4.3 Tree Death—Must the Trees be Killed?	199	9. Conclusions	237
4.4 Naïve Host Trees	200	9.1 Interesting Questions and Challenges	237
4.5 Effects of Biotic and Abiotic Disturbances on Tree Defense	200	References	238
5. Conclusions	202		
References	202		
6. Symbiotic Associations of Bark Beetles	209	7. Natural Enemies of Bark Beetles: Predators, Parasitoids, Pathogens, and Nematodes	247
<i>Richard W. Hofstetter, Jamie Dinkins-Bookwalter, Thomas S. Davis, and Kier D. Klepzig</i>		<i>Rudolf Wegensteiner, Beat Wermelinger, and Matthias Herrmann</i>	
1. Introduction	209	1. Introduction	247
1.1 Why Symbioses are Important to Understand	209	2. Predators and Parasitoids of Bark Beetles	247
1.2 General Description of Major Symbionts	209	2.1 Woodpeckers and other Avian Predators	247
1.3 Definition of Terms	211	2.2 Arthropod Predators and Parasitoids	250
2. Fungi	211	3. Pathogens of Bark Beetles	277
2.1 Biodiversity of Fungi	211	3.1 Pathogen Groups and their Modes of Action	277
2.2 Ecology of Fungi	211	3.2 Issues Relating to Our Current Understanding of Insect Pathogens in Bark Beetles	286
2.3 Impacts of Fungi on Bark Beetle Biology and Population Dynamics	212	4. Nematodes	287
3. Yeasts	214	4.1 Historical Background	287
3.1 Biodiversity of Yeasts	214	4.2 General Biology	287
3.2 Ecology of Yeasts	214	5. Conclusion	289
3.3 Impacts on Bark Beetle Biology and Population Dynamics	215	Acknowledgments	289
4. Bacteria	215	References	289
4.1 Biodiversity of Bacteria	215		
4.2 Ecology of Bacteria	216	8. Dendroctonus	305
		<i>Diana L. Six and Ryan Bracewell</i>	
		1. Introduction	305
		1.1 Life History	305
		1.2 Morphology, Body Size, and Sexual Size Dimorphism	305
		1.3 Host Range and Specialization	307
		1.4 Communication and Host Location	308

1.5	Phylogeny and Taxonomy	308	1.2	Pheromones	351
1.6	Population Genetics and Cryptic Species	309	1.3	Taxonomic History	352
1.7	Karyotypic Diversity	311	1.4	Subgenera	354
2.	Effects of the Environment	311	2.	Historical Perspective of Species Taxonomy	354
2.1	The Abiotic Environment	311	3.	Phylogenetics and Population Genetics	357
2.2	The Biotic Environment	313	4.	Evolution	359
2.3	Host Beetle Clade 1: <i>Dendroctonus armandi</i>	317	5.	Annotated List of <i>Ips</i> Species	360
2.4	Host Beetle Clade 2: <i>Dendroctonus simplex</i> , <i>D. pseudotsugae</i>	317	6.	Conclusion	366
2.5	Host Beetle Clade 3: <i>Dendroctonus rufipennis</i> , <i>D. micans</i> , <i>D. punctatus</i> , <i>D. murrayanae</i>	317		Acknowledgments	366
2.6	Host Beetle Clade 4: <i>Dendroctonus terebrans</i> , <i>D. valens</i> , <i>D. parallellocollis</i> , <i>D. rhizophagus</i>	318		References	367
2.7	Host Beetle Clade 5: <i>Dendroctonus ponderosae</i> , <i>D. jeffreyi</i>	319	10.	The Genus <i>Tomicus</i>	371
2.8	Host Beetle Clade 6: <i>Dendroctonus vitei</i> , <i>D. frontalis</i> , <i>D. mexicanus</i> , <i>D. adjunctus</i> , <i>D. approximatus</i> , <i>D. brevicomis</i>	320		<i>François Lieutier, Bo Långström, and Massimo Faccoli</i>	
3.	Ecological Importance	324	1.	Introduction	371
4.	Anthropogenic Effects	324	2.	Taxonomic and Phylogenetic Aspects	371
4.1	Alteration of Forests	324	2.1	Taxonomy	371
4.2	Movement of Species into Novel Environments	325	2.2	Phylogenetic Relationships between Species	374
5.	The Basic Biology of <i>Dendroctonus</i> Species	326	2.3	General Morphology and Species Separation	375
5.1	Clade 1: <i>Dendroctonus armandi</i>	326	3.	Geographic Distribution and Host Range	377
5.2	Clade 2: <i>Dendroctonus simplex</i> , <i>D. pseudotsugae</i>	326	4.	Basic Biology and Ecology	377
5.3	Clade 3: <i>Dendroctonus rufipennis</i> , <i>D. micans</i> , <i>D. punctatus</i> , <i>D. murrayanae</i>	328	4.1	General Patterns, Gallery Systems, and Localization in Trees	377
5.4	Clade 4: <i>Dendroctonus terebrans</i> , <i>D. valens</i> , <i>D. parallellocollis</i> , <i>D. rhizophagus</i>	331	4.2	<i>Tomicus piniperda</i>	379
5.5	Clade 5: <i>Dendroctonus ponderosae</i> , <i>D. jeffreyi</i>	333	4.3	<i>Tomicus minor</i>	382
5.6	Clade 6: <i>Dendroctonus vitei</i> , <i>D. frontalis</i> , <i>D. mexicanus</i> , <i>D. adjunctus</i> , <i>D. approximatus</i> , <i>D. brevicomis</i>	335	4.4	<i>Tomicus destruens</i>	383
6.	Conclusion	338	4.5	<i>Tomicus yunnannensis</i>	385
	References	339	4.6	Other <i>Tomicus</i> Species	385
9.	Biology, Systematics, and Evolution of <i>Ips</i>	351	5.	Biotic Associations	386
	<i>Anthony I. Cognato</i>		5.1	Viruses, Bacteria, and Unicellular Eukaryotes	386
1.	Introduction	351	5.2	Fungi	387
1.1	Biology	351	5.3	Nematodes	390
			5.4	Mites (Acarina)	392
			5.5	Insects	392
			5.6	Vertebrates	397
			6.	Population Dynamics	397
			6.1	Principles of Population Dynamics and Strategies for Establishment on Trees	397
			6.2	Factors involved in Population Dynamics	398
			6.3	Density-dependent Factors	399
			6.4	Density-independent Factors	401
			6.5	Factors Affecting the Tree Resistance Level	402
			6.6	Conclusions on Population Dynamics	404

7. Dispersal	404	12. <i>Scolytus</i> and other Economically Important Bark and Ambrosia Beetles	495
7.1 Natural Dispersal	404	<i>Sarah M. Smith and Jiri Hulcr</i>	
7.2 Anthropogenic Dispersal	405	1. Introduction to Diversity of North American Species	495
7.3 Climate Effects	405	2. <i>Scolytus</i>	495
8. Damage and Economic and Ecological Importance	405	2.1 Overview	495
8.1 General Patterns	405	2.2 Economically Important Species	498
8.2 Shoot Damage	406	3. <i>Polygraphus</i>	500
8.3 Tree Mortality	407	3.1 Overview	500
8.4 Economic Impact of Attacks	408	3.2 Economically Important Species	501
8.5 Ecological Consequences	409	4. <i>Pseudohylesinus</i>	501
9. Management	409	4.1 Overview	501
9.1 Detection and Survey	409	4.2 Economically Important Species	503
9.2 Population Management Methods	410	5. <i>Dryocoetes</i>	503
10. Conclusion	413	5.1 Overview	503
Acknowledgments	414	5.2 Economically Important Species	505
References	414	6. <i>Xyleborus</i>	505
		6.1 Overview	505
		6.2 Economically Important Species	507
		7. <i>Euwallacea</i>	508
		7.1 Overview	508
		7.2 Economically Important Species	509
		8. <i>Xylosandrus</i>	510
		8.1 Overview	510
		8.2 Economically Important Species	511
		9. <i>Trypodendron</i>	513
		9.1 Overview	513
		9.2 Economically Important Species	514
		10. <i>Pityophthorus</i>	514
		10.1 Overview	514
		10.2 Economically Important Species	517
		11. <i>Conophthorus</i>	517
		11.1 Overview	517
		11.2 Economically Important Species	519
		12. <i>Gnathotrichus</i>	519
		12.1 Overview	519
		12.2 Economically Important Species	521
		13. <i>Monarthrum</i>	521
		13.1 Overview	521
		13.2 Economically Important Species	523
		14. Conclusion	523
		Acknowledgments	524
		References	524
11. The Genus <i>Hypothenemus</i> , with Emphasis on <i>H. hampei</i> , the Coffee Berry Borer	427		
<i>Fernando E. Vega, Francisco Infante, and Andrew J. Johnson</i>			
1. Introduction	427	13. Modeling Bark Beetle Responses to Climate Change	533
2. The Genus <i>Hypothenemus</i>	427	<i>Barbara J. Bentz and Anna Maria Jönsson</i>	
2.1 Key Characters for Identification to Genus	427	1. Introduction	533
2.2 Taxonomy	427	2. Model Types and Data Requirements	534
2.3 Typical <i>Hypothenemus</i> Life Cycle	430	2.1 Phenology Models	534
2.4 Host Plants	430	2.2 Ecosystem Models	536
2.5 An Introduction to Some <i>Hypothenemus</i> Species	430		
2.6 Molecular Phylogenetics of <i>Hypothenemus</i> Species	435		
3. Coffee and the Coffee Berry Borer	435		
3.1 Taxonomy and Synonymies	435		
3.2 Taxonomic Characters	437		
3.3 Distribution	437		
3.4 Damage and Losses	437		
3.5 Biology	439		
3.6 Ecology	444		
3.7 Shade	446		
3.8 Rearing	451		
3.9 Sampling	451		
3.10 Traps and Attractants	451		
3.11 Repellents	453		
3.12 Plant Resistance	454		
3.13 Endosulfan Resistance	455		
3.14 Biological Control	455		
3.15 Cultural Control	473		
3.16 Climate Change	474		
4. Conclusions	474		
Acknowledgments	474		
References	475		

2.3 Management Models	536	6.3 Pheromone-baited Traps	573
3. Developed Models	537	6.4 Push Pull	574
3.1 <i>Dendroctonus frontalis</i> (Zimmermann)	537	6.5 Debarking of Infested Host Material	574
3.2 <i>Dendroctonus ponderosa</i> (Hopkins)	538	6.6 Biological Control	574
3.3 <i>Dendroctonus rufipennis</i> (Kirby)	542	6.7 Insecticides	574
3.4 <i>Hylobius abietis</i> (L.)	542	6.8 Risk and Hazard Rating and Silviculture	574
3.5 <i>Hypothenemus hampei</i> (Ferrari)	543	7 Conclusions	575
3.6 <i>Ips typographus</i> (L.)	544	References	576
4. Comparisons among Bark Beetle Species in Response to Climate	545	15. Economics and Politics of Bark Beetles	585
4.1 Phenology Models	545	<i>Jean-Claude Grégoire, Kenneth F. Raffa, and B. Staffan Lindgren</i>	
4.2 Ecosystem and Management Models	546	1. Introduction—Ecosystems, Humans, and Bark Beetles	585
5. Model Limitations	547	2. Economics	585
6. Conclusions	548	2.1 Damage	585
Acknowledgments	549	2.2 Salvage	588
References	549	3. Politics	589
14. Management Strategies for Bark Beetles in Conifer Forests	555	3.1 Management	589
<i>Christopher J. Fettig and Jacek Hilszczański</i>		3.2 Anticipating Trouble	590
1. Introduction	555	4. A Diversity of Patterns—Illustrative Case Studies	590
1.1 Bark Beetle Ecology	556	4.1 Fallen and Standing Alike—The Eight-toothed Spruce Bark Beetle in Eurasia	590
1.2 Development of Outbreaks	557	4.2 A Deadly Mistake, but for Which Party?—Secondary Ambrosia Beetles Attacking Living Beech in Europe	601
2. Detection and Survey	558	4.3 Fallen and Standing Alike—The Spruce Beetle in North America	602
2.1 Aerial Survey	558	4.4 A Political, Economic and Ecological Challenge—The Mountain Pine Beetle in British Columbia	603
2.2 Ground-based Surveys	559	4.5 A Chronic Presence—The Pine Engraver Across the Continent	604
3. Risk and Hazard Rating	560	5. Conclusions	606
4. Direct Control	562	References	606
4.1 Acoustics	562		
4.2 Biological Control	562		
4.3 Cultural	563		
4.4 Insecticides	564		
4.5 Fire	565		
4.6 Semiochemicals	566		
5. Indirect Control	569		
5.1 Thinning	569		
5.2 Landscape Heterogeneity	571		
5.3 Prescribed Fire	571		
5.4 Social Acceptance of Management Strategies	571		
6. Case Study—Management of <i>Ips typographus</i> in Central Europe	571		
6.1 Sanitation Salvage	572		
6.2 Trap Trees	572		
		Index	615
