CONTENTS

Contributors *xi*
Preface *xv*

1. Overview of Root-Knot Nematodes and Giant Cells **1**
Carolina Escobar, Marta Barcala, Javier Cabrera and Carmen Fenoll

1. Introduction to Plant Parasitic Nematodes 2
2. General Aspects of Root-Knot Nematodes (RKNs) 5
3. The Morphology and Reproduction of RKNs 8
4. The Life Cycle of RKNs 12
5. Giant Cells (GCs): From Vascular Cells to Nourishing Cells 15
6. Holistic Approaches to Tackle GCs Specific Gene Expression 22
7. Conclusions 23

Acknowledgements 24
References 24

2. Introductory Chapter on the Basic Biology of Cyst Nematodes **33**
Holger Bohlmann

1. Introduction 34
2. Morphology 35
3. Hatching 39
4. Host Finding and Penetration 44
5. Induction of a Feeding Site 45
6. Reproduction and Life Cycle 48
7. Host Range 49
8. Survival 50
9. Plant Resistance against Cyst Nematodes 50

References 53

3. Cell Wall Alterations in Nematode-Infected Roots **61**
Krzysztof Wieczorek

1. Introduction 62
2. Modifications of the Plant Cell Wall Caused by Cell Wall Modifying and Degrading Proteins Secreted during Migratory Phase by Plant-Parasitic Nematodes 65
3. Structural Modification of the Cell Wall in Feeding Sites Induced by Plant-Parasitic Nematodes 70

4. Cell Wall-Related Effectors Secreted by Plant-Parasitic Nematodes during Sedentary Phase of Nematode Parasitism 74
5. Expression of Plant Genes Encoding Proteins Involved in Cell Wall Modification and Biosynthesis during Sedentary Phase of Nematode Parasitism 75
References 84

4. The Plant Cell Cycle Machinery: Usurped and Modulated by Plant-Parasitic Nematodes 91

Janice de Almeida Engler, Paulo Vieira, Natalia Rodiuc, Maria Fatima Grossi de Sa and Gilbert Engler

1. The Plant Cell Cycle in Nematode Feeding Sites 92
2. Genes Involved in the Endocycle are Critical for Plant-Parasitic NFS Establishment 95
3. The Involvement of CKI during Gall Formation 97
4. Understanding the Cell Cycle during Plant–Nematode Interactions Using Different Microscopy Approaches 100
5. Conclusions and Perspectives 112
Acknowledgements 113
References 113

5. Metabolism in Nematode Feeding Sites 119

Shahid Siddique and Florian M.W. Grundler

1. Metabolism in NFSs 120
2. Vascularization and Nutrient Delivery 127
3. Amino Acid Metabolism in NFSs 131
4. Conclusion and Perspective 133
Acknowledgements 134
References 134

6. The Role of Lipid Signalling in Regulating Plant–Nematode Interactions 139

Sigal Brown Miyara, Iberkleid Ionit, Patricia Buki and Mike Kolomiets

1. Introduction 140
2. The Role of Lipid Signals in Regulating Plant–Nematode Interaction 148
3. Conclusions and Future Issues 158
Acknowledgements 158
References 158

7. Developmental Pathways Mediated by Hormones in Nematode Feeding Sites **167**

Javier Cabrera, Fernando E. Díaz-Manzano, Carmen Fenoll and Carolina Escobar

1. Introduction 168
2. Nematode Peptide Hormones as Interceptors of Plant Development to Form Feeding Sites 171
3. Auxins, Lateral Root Formation and Feeding Sites 175
4. Giant Cell Morphogenesis and Transfer Cell Nature 179

Acknowledgements 181
References 182

8. Recent Advances in Understanding Plant–Nematode Interactions in Monocots **189**

Diana Fernandez, Anne-Sophie Petitot, Maíra Grossi de Sá, Vũ Phong Nguyễn, Janice de Almeida Engler and Tina Kyndt

1. Introduction 190
2. Monocotyledonous Plant–Nematode Systems: Biology and Genetics of Interactions 192
3. Histological Descriptions of Roots during Nematode Development and Host Resistance Responses 201
4. Transcriptomics of Monocotyledonous Plant Responses to Nematodes 205
5. Nematode Effectors in Monocots–Nematode Interactions 211
6. Conclusions 212

References 213

9. Gene Silencing in Nematode Feeding Sites **221**

Tarek Hewezi and Thomas J. Baum

1. Introduction 221
2. Global Gene Downregulation in the Nematode Feeding Sites 223
3. Influence of Various Components of Small RNA Pathways on Nematode Parasitism 224
4. Key Regulatory Roles of miRNAs in Feeding Site Initiation and Formation 226
5. Suppression of Nematode Genes Using Host-Induced Gene Silencing 229
6. VIGS as a Tool for Functional Genomics of Plant–Nematode Interactions 232
7. Conclusions and Perspectives 234

Acknowledgements 235
References 235

10. Exploiting Solved Genomes of Plant-Parasitic Nematodes to Understand Parasitism **241**

David M. Bird, Valerie M. Williamson and Charles H. Opperman

1. Introduction 242
2. The EST Epoc 244
3. Whole PPN Genomes 246
4. Comparative Genomics 248
5. Diverse Reproductive Modes of PPN Impact Genome Analysis 250
6. Integration of Genetics with Genomics for Phenotype-Based Identification of Parasitism Genes 252

References 255

11. Emerging Roles of Cyst Nematode Effectors in Exploiting Plant Cellular Processes **259**

Michael Gardner, Anju Verma and Melissa G. Mitchum

1. Introduction 260
2. Augmentation of Plant Developmental Processes 261
3. Modulation of Host Stress and Defence Responses 270
4. Genome-Enabled Effector Discovery 281

Acknowledgements 284

References 284

12. Function of Root-Knot Nematode Effectors and Their Targets in Plant Parasitism **293**

Nhat My Truong, Chinh-Nghia Nguyen, Pierre Abad, Michaël Quentin and Bruno Favery

1. Introduction 294
2. Compatible Interaction and Life Cycle 295
3. Identification of Nematode-Secreted Effectors 297
4. Functional Analyses of Effectors 308
5. Conclusions 318

Acknowledgements 319

References 319

13. Suppression of Plant Defences by Plant-Parasitic Nematodes **325**

Sophie Mantelin, Peter Thorpe and John T. Jones

1. Introduction 325
2. Plant Defences 326
3. Nematode Effectors 327

4. Suppression of Plant Defences 328
5. Hormone Signalling and Plant Defences 332
Acknowledgements 334
References 334

14. Application of Biotechnology for Nematode Control in Crop Plants 339

John Fosu-Nyarko and Michael G.K. Jones

1. Introduction 340
2. Early Selection for Plants with Nematode Resistance; Susceptibility, Resistance and Tolerance 341
3. Biotechnological Approaches to Plant Parasitic Nematode Control 344
4. Natural Resistance Approach to Plant Parasitic Nematode Control 344
5. Transgenic Approaches to Plant Parasitic Nematode Control 349
6. 'Transgenic' Technology Advances 357
7. From the Laboratory to the Market – Commercialization of Plant Parasitic Nematode-Resistance Traits 359
8. Transgenic Nematode Resistance for Public Good 363
9. Regulation and Public Acceptance of GM Traits 365
10. Safety of RNAi-Based Traits 365
11. Genome-Enabled Development of Novel Chemical Nematicides 366
12. Ectopic Delivery of dsRNA – Nontransgenic RNAi 367
13. Other New Nematode Control Agents 367
14. Conclusions 368
