

CONTENTS

<i>Contributors</i>	ix
<i>Preface</i>	xi
1. The "Mendelian Gene" and the "Molecular Gene": Two Relevant Concepts of Genetic Units	1
V. Orgogozo, A.E. Peluffo, and B. Morizot	
1. Introduction	2
2. The "Mendelian Gene" and the "Molecular Gene"	5
3. Current Literature Often Confuses the "Mendelian Gene" and the "Molecular Gene" Concepts	7
4. How Many Genes, Alleles, and Loci Within a Genome?	11
5. "Genes" as Causal Agents of Phenotypes	13
6. Searching for the Concrete Objects Represented by "Genes"	14
7. The <i>white</i> Gene	16
8. The <i>Curly</i> Gene	18
9. The Molecular Delimitations of the "Mendelian Gene" and the "Molecular Gene" Do Not Always Match	19
10. Conclusion	21
Acknowledgments	22
References	22
2. The Genetic Basis of Pigmentation Differences Within and Between <i>Drosophila</i> Species	27
J.H. Massey and P.J. Wittkopp	
1. Introduction	28
2. Development of <i>Drosophila</i> Pigmentation	29
3. Tissue-Specific Regulation of Pigmentation	36
4. Abdominal Pigmentation	36
5. Thorax Pigmentation	45
6. Wing Pigmentation	48
7. Pupal Pigmentation	52
8. Lessons Learned from <i>Drosophila</i> Pigmentation	53
References	56

3. To Have and to Hold: Selection for Seed and Fruit Retention During Crop Domestication	63
L.-F. Li and K.M. Olsen	
1. Introduction	64
2. Developmental Basis for the Loss of Seed and Fruit Dispersal in Crops	66
3. Molecular Genetic Basis of Shattering in Seed Crops	71
4. Molecular Genetic Basis of Fruit Retention in Fruit Crops	93
5. Concluding Remarks	96
Acknowledgments	96
References	97
4. The Genetics Underlying Natural Variation in the Biotic Interactions of <i>Arabidopsis thaliana</i>: The Challenges of Linking Evolutionary Genetics and Community Ecology	111
F. Roux and J. Bergelson	
1. The Social Network of the Model Plant <i>Arabidopsis thaliana</i>	112
2. Genetic and Molecular Bases Underlying Natural Variation in the Response to Biotic Interactions	116
3. Adaptive Value of Polymorphic Genes Involved in Biotic Interactions	131
4. Future Avenues: Coevolutionary Genetics	141
Acknowledgments	143
References	143
5. Behavioral Genetic Toolkits: Toward the Evolutionary Origins of Complex Phenotypes	157
C.C. Rittschof and G.E. Robinson	
1. Introduction	158
2. Extending a Morphological Concept to Behavior	160
3. The Scope of Behavioral Genetic Toolkit Research	166
4. Genes and Gene Networks: Links to Behavior and Evolution Across Species	173
5. Emerging Ideas and Future Directions	182
6. Conclusions	194
Acknowledgments	194
References	194
6. Identifying Coopted Networks and Causative Mutations in the Origin of Novel Complex Traits	205
A. Monteiro and M.D. Gupta	
1. Introduction	206
2. The Difficulty of Research on the Evolution of Novel Traits	206

3. Examples of Novel Complex Traits and Their Likely Origin via Cooption of Preexistent Networks	207
4. Misconceptions Around the Cooption of Preexisting CREs Required for the Evolution of Novel Traits	209
5. The CRE-DDC Model	216
6. How to Differentiate <i>cis</i> -Element Evolution vs <i>cis</i> -Element Reuse via Gene Network Cooption in the Origin of Novel Traits	216
7. Novel Approaches to Identify Top Regulators of Networks and Causative Mutations in the Origin of Novel Complex Traits: The Power of Forward Genetic Screens	218
8. How to Identify Coopted GRNs Using Novel Genomic Tools	220
9. Summary and Future Prospects	223
Acknowledgments	224
References	224
7. Looking Beyond the Genes: The Interplay Between Signaling Pathways and Mechanics in the Shaping and Diversification of Epithelial Tissues	227
S. Urdy, N. Goudemand, and S. Pantalacci	
1. Introduction	229
2. Shaping of Epithelial Tissues During Development	234
3. The Evolutionary Genetics Perspective on the Diversification of Organs Derived from Epithelial Tissues	255
4. The Evo-Devo Perspective on the Diversification of Organs Derived from Epithelial Tissues	262
5. Conclusion	274
Acknowledgments	275
References	275
8. Phenotypic Evolution With and Beyond Genome Evolution	291
M.-A. Félix	
1. Introduction	292
2. Phenotypic Construction of an Individual	295
3. Phenotypic Variation Among Individuals	301
4. Origin of Variation, Heredity, and Evolution	327
Acknowledgments	338
References	338
9. Human Phenotypic Diversity: An Evolutionary Perspective	349
P. Balaresque and T.E. King	
1. Phenotypes in an Evolutionary Context: About Adaptive Processes	350

2. Phenotype: Definition	350
3. Traits Associated with Human Identification or the Externally Visible Characteristics: About Color and Shape	352
4. The Phenotypics of Adaptation to Newly Exploited Resources: Lactase, Amylase	380
5. Adaptation to an Environmental Component: Altitude and Hypoxia	382
6. Phenotypic Variation, Adaptation, and Duplication: Are Copy Number Genes an Easy Solution to Respond to Rapid Changes?	383
7. Concluding Remarks	384
Acknowledgments	384
References	384
Index	391
