

CONTENTS

<i>Contributors</i>	xv
<i>Preface</i>	xix
<i>Volumes in Series</i>	xxi
1. Explanatory Chapter: PCR Primer Design	1
Rubén Álvarez-Fernández	
1. Theory	2
Acknowledgments	19
References	19
2. Explanatory Chapter: How Plasmid Preparation Kits Work	23
Laura Koontz	
1. Theory	23
2. Equipment	24
3. Materials	24
4. Protocol	24
5. Step 1 Pellet Bacteria and Resuspend in Resuspension Buffer	24
6. Step 2 Lyse Bacteria	25
7. Step 3 Neutralize the Solution	26
8. Step 4 Apply Clarified Lysate to Column	26
9. Step 5 Pass Binding Buffer Through Column	27
10. Step 6 Wash the Column	27
11. Step 7 Elute the DNA	27
References	28
3. Explanatory Chapter: Introducing Exogenous DNA into Cells	29
Laura Koontz	
1. Theory	29
2. Protocol	30
Source Reference	34
4. Agarose Gel Electrophoresis	35
Laura Koontz	
1. Theory	36
2. Equipment	36

3. Materials	36
4. Protocol	39
5. Step 1 Casting an Agarose Gel	40
6. Step 2 Loading and Running an Agarose Gel	42
7. Step 3 Visualization of Samples on an Agarose Gel	44
5. Analysis of DNA by Southern Blotting	47
Gary Glenn and Lefkothea-Vasiliki Andreou	
1. Theory	48
2. Equipment	49
3. Materials	49
4. Protocol	53
5. Step 1 Restriction Digestion of Genomic DNA and Agarose Gel Electrophoresis	54
6. Step 2 Denature DNA and Transfer It to a Nylon Membrane	54
7. Step 3A Label the Probe with α - 32 P]-dCTP Using a Random Primed Labeling Kit	56
8. Step 3B Label the Probe with Digoxigenin-11-dUTP for Nonradioactive Detection	59
9. Step 4 Hybridize the Labeled Probe to the Membrane	59
10. Step 5 Detect the Location of the Hybridized Probe	61
References	63
6. Purification of DNA Oligos by Denaturing Polyacrylamide Gel Electrophoresis (PAGE)	65
Sara Lopez-Gomollon and Francisco Esteban Nicolas	
1. Theory	66
2. Equipment	69
3. Materials	70
4. Protocol	72
5. Step 1 Butanol Precipitation of Crude Oligonucleotide	72
6. Step 2 Preparative Polyacrylamide Gel Electrophoresis	75
7. Step 3 Isolation of Oligonucleotides from Polyacrylamide Gels	76
8. Step 4A Elution of Oligonucleotide from Polyacrylamide Gel by Diffusion	78
9. Step 4B Elution of Oligonucleotide from Polyacrylamide Gel by Electroelution	80
10. Step 5 Ethanol Precipitation	82
References	83

7. Molecular Cloning	85
Juliane C. Lessard	
1. Theory	86
2. Equipment	88
3. Materials	88
4. Protocol	90
5. Step 1 Restriction Digests of Vector and Insert	91
6. Step 2 Ligation	93
7. Step 3 Transformation into Chemically Competent <i>E. coli</i>	94
8. Step 4 Identify Successful Ligation Events	96
References	98
8. Rapid Creation of Stable Mammalian Cell Lines for Regulated Expression of Proteins Using the Gateway® Recombination Cloning Technology and Flp-In T-REx® Lines	99
Jessica Spitzer, Markus Landthaler, and Thomas Tuschl	
1. Theory	100
2. Equipment	104
3. Materials	105
4. Protocol	110
5. Step 1 Molecular Cloning of the Gene of Interest into Gateway Expression Vectors	112
6. Step 2 Establishing Stable Cell Lines Expressing the Protein of Interest	118
References	123
Source References	123
9. Restrictionless Cloning	125
Mikkel A. Algire	
1. Theory	126
2. Equipment	126
3. Materials	126
4. Protocol	127
5. Step 1 Cloning Vector Preparation	128
6. Step 2 PCR Primer Design and PCR	130
7. Step 3 Insert Denaturation and Annealing	132
8. Step 4 Ligation and Transformation	133
References	134
10. Isolation of Plasmid DNA from Bacteria	135
Lefkothea-Vasiliki Andreou	
1. Theory	136
2. Equipment	136

3. Materials	137
4. Protocol	138
5. Step 1 Harvesting the Bacteria	139
6. Step 2 Cell Lysis and Isolation of Plasmid DNA	139
References	142
11. Preparation of Genomic DNA from Bacteria	143
Lefkothea-Vasiliki Andreou	
1. Theory	144
2. Equipment	144
3. Materials	144
4. Protocol	145
5. Step 1 Cell Lysis	146
6. Step 2 Organic Extraction and Ethanol Precipitation of DNA	147
7. Step 3 DNA Quantity and Quality Assessment	149
References	151
12. Preparation of Genomic DNA from <i>Saccharomyces cerevisiae</i>	153
Jessica S. Dymond	
1. Theory	154
2. Equipment	154
3. Materials	154
4. Protocol	155
5. Step 1 Harvesting Cells from the Overnight Culture	155
6. Step 2 Initial DNA Extraction	156
7. Step 3 Purification of the Crude DNA Preparation	157
References	160
Source References	160
13. Isolation of Genomic DNA from Mammalian Cells	161
Cheryl M. Koh	
1. Theory	162
2. Equipment	162
3. Materials	162
4. Protocol	164
5. Step 1 Collection of Cells	165
6. Step 2 Cell Lysis	166
7. Step 3 Organic Extraction	167
8. Step 4 Ethanol Precipitation	167
References	169

14. Sanger Dideoxy Sequencing of DNA	171
Sarah E. Walker and Jon Lorsch	
1. Theory	172
2. Equipment	172
3. Materials	173
4. Protocol	175
5. Step 1 Anneal Primer to DNA	176
6. Step 2 Labeling	177
7. Step 3 Extension/Termination	178
8. Step 4 Resolution of Labeled Products by Urea-PAGE	179
References	184
15. Preparation of Fragment Libraries for Next-Generation Sequencing on the Applied Biosystems SOLiD Platform	185
Srinivasan Yegnasubramanian	
1. Theory	186
2. Equipment	187
3. Materials	188
4. Protocol	190
5. Step 1 Shear the DNA to Generate Random Fragments	191
6. Step 2 End-Repair the Fragmented DNA	193
7. Step 3 Adaptor Ligation	194
8. Step 4 Size Selection of Library	196
9. Step 5 Amplification of the Library	197
References	200
16. Explanatory Chapter: Next Generation Sequencing	201
Srinivasan Yegnasubramanian	
1. Theory	202
References	208
17. Generating Mammalian Stable Cell Lines by Electroporation	209
Patti A. Longo, Jennifer M. Kavan, Min-Sung Kim, and Daniel J. Leahy	
1. Theory	210
2. Equipment	211
3. Materials	212
4. Protocol	214
5. Step 1 Dilute Plasmid DNA	215
6. Step 2 Prepare Cells for Electroporation	216

7. Step 3 Electroporate the Cells	219
8. Step 4 Plating Electroporated Cells	220
9. Step 5 Picking Single Colonies of Cells	221
10. Step 6 Methotrexate Amplification	223
References	225
18. Transient Mammalian Cell Transfection with Polyethylenimine (PEI)	227
Patti A. Longo, Jennifer M. Kavan, Min-Sung Kim, and Daniel J. Leahy	
1. Theory	228
2. Equipment	229
3. Materials	229
4. Protocol	231
5. Step 1 Small-Scale Transient Transfection	232
6. Step 1.1 Seed Adherent Cells for Transfection	232
7. Step 1.2 Transiently Transfect Cells	234
8. Step 1.3 Harvest Cells and Analyze Protein Expression	235
9. Step 2 Large-Scale Transient Transfection of Suspension Cells	236
10. Step 2.1 Prepare the Cells To Be Transfected	236
11. Step 2.2 Transfect Cells	237
12. Step 2.3 Harvest Cells and Process Protein as Needed	238
References	240
19. Site-Directed Mutagenesis	241
Julia Bachman	
1. Theory	242
2. Equipment	242
3. Materials	242
4. Protocol	243
5. Step 1 Setting up and Run the PCR	243
6. Step 2 Digestion of Template DNA	246
7. Step 3 Transformation into Chemically Competent <i>E. coli</i>	246
8. Step 4 Colony Screening	248
References	248
20. PCR-Based Random Mutagenesis	249
Jessica S. Dymond	
1. Theory	250
2. Equipment	250

3. Materials	250
4. Protocol	251
5. Step 1 PCR Setup	252
6. Step 2 Generation of Additional Template for Mutagenesis	253
7. Step 3 Mutagenic PCR	254
8. Step 4 Subclone and Sequence the PCR Products	255
References	257
21. Megaprimer Method for Mutagenesis of DNA	259
Craig W. Vander Kooi	
1. Theory	260
2. Equipment	260
3. Materials	261
4. Protocol	261
5. Step 1 Design Mutagenic Primer	262
6. Step 2 First Round of PCR	263
7. Step 3 Gel Purification of the Megaprimer	265
8. Step 4 Second Round of PCR	265
9. Step 5 Gel Purification of the Mutagenized Gene	267
10. Step 6 Subclone the Mutagenized DNA and Verify the Mutation by DNA Sequencing	268
References	269
22. Explanatory Chapter: Troubleshooting PCR	271
Kirstie Canene-Adams	
1. Theory	271
2. Equipment	272
3. Materials	272
4. Protocol	272
References	278
23. Explanatory Chapter: Quantitative PCR	279
Jessica S. Dymond	
1. Theory	280
2. Terminology	281
3. Equipment	281
4. Materials	282
5. Protocol	282
6. Step 1 Primer Design	282

7. Step 2 Control Gene	283
8. Step 3 Amplification Efficiency	283
9. Step 4 Probe Choice	284
10. Step 5 Data Analysis	287
References	288
24. General PCR	291
Kirstie Canene-Adams	
1. Theory	292
2. Equipment	293
3. Materials	293
4. Protocol	294
5. Step 1 Polymerase Chain Reaction	295
6. Step 2 Analyze PCR Products	297
References	298
25. Colony PCR	299
Megan Bergkessel and Christine Guthrie	
1. Theory	300
2. Equipment	300
3. Materials	301
4. Protocol	303
5. Step 1 Extraction of DNA from a Colony	304
6. Step 2 PCR	307
7. Step 3 Visualization of Product on an Agarose Gel	308
References	309
26. Chemical Transformation of Yeast	311
Megan Bergkessel and Christine Guthrie	
1. Theory	312
2. Equipment	312
3. Materials	313
4. Protocol	314
5. Step 1 Preparation of Competent Cells	315
6. Step 2 Transformation of Yeast Cells	317
References	320

27. Transformation of <i>E. coli</i> Via Electroporation	321
Juliane C. Lessard	
1. Theory	321
2. Equipment	322
3. Materials	322
4. Protocol	322
5. Step 1 Create Electro-Competent <i>E. coli</i>	324
6. Step 2 Electroporation of <i>E. coli</i>	324
References	327
28. Transformation of Chemically Competent <i>E. coli</i>	329
Rachel Green and Elizabeth J. Rogers	
1. Theory	330
2. Equipment	330
3. Materials	330
4. Protocol	332
5. Step 1 Prepare Competent Cells	333
6. Step 2 Transform Competent Cells	334
References	336
