Preface to the First Edition xv

Preface to the Second Edition xvii

1. Introduction 1

1.1 Why Study Soil-Plant-Water Relations? 1

1.2 Plant Growth Curves 5

1.3 Appendix: Biography of John Napier 11

2. Definitions of Physical Units and the International System 15

2.1 Definitions 15

2.2 Le Système International d'Unités 20

2.3 Example: Applying Units of Work and Pressure to a Root 23

2.4 Appendix: Biography of Isaac Newton 24

3. Structure and Properties of Water 27

3.1 Structure of Water 27

3.2 Forces that Bind Water Molecules Together 28

3.3 Properties of Water 30

3.4 Appendix: Biography of Johannes van der Waals 38

4. Soil-Water Terminology and Applications 41

4.1 Water Content 41

4.2 Water Potential 41

4.3 Heads in a Column of Soil 48

4.4 Movement of Water between Tensiometers 50

4.5 Appendix: Biography of William L. Powers 51

5. Tensiometers 53

5.1 Description of a Tensiometer 53

5.2 Types of Tensiometers 57

5.3 Temperature Effects on Tensiometers 64

5.4 Applications of Tensiometers 65

5.5 Appendix: Biography of L.A. Richards 67

6. Static Water in Soil	71
6.1 Surface Tension	71
6.2 Examples of Surface Tension	77
6.3 Rise and Fall of Water in Soil Pores	79
6.4 Appendix: Biography of Marquis de Laplace	83
7. Water Movement in Saturated Soil	87
7.1 Darcy's Law	87
7.2 Hydraulic Conductivity	88
7.3 Laplace's Equation	89
7.4 Ellipse Equation	90
7.5 Linear Flow Laws	95
7.6 Appendix: Biography of Apollonius of Perga	97
7.7 Appendix: Biography of Henry Darcy	98
8. Time Domain Reflectometry	103
8.1 Definitions	103
8.2 Dielectric Constant, Frequency Domain, and Time Domain	106
8.3 Theory for the Use of the Dielectric Constant to Measure Soil Water Content	107
8.4 Coaxial Cable and Waveguides	109
8.5 Measurement of Soil Water Content Using TDR	111
8.6 Practical Information When Using TDR to Measure Soil Water Content	113
8.7 Example of Using TDR to Determine Root Water Uptake	115
8.8 Commercially Available Equipment	117
8.9 Appendix: Biography of Heinrich Hertz	118
8.10 Appendix: Biography of Sergei Schelkunoff	119
9. Dual Thermal Probes	123
9.1 Introduction	123
9.2 Thermal Properties of Soils	126
9.3 Theory of the Dual-Probe Heat-Pulse Method	127
9.4 Example Calculation	130
9.5 Meaning of Q	131
9.6 Measurements of Differences of Water Content, $\Delta\theta$	132
9.7 Errors	132
9.8 Advantages	133
9.9 Calibration	134
9.10 Measurements Near the Soil Surface	135
9.11 Convection and Its Effect on Measurements	135
9.12 Measurement of Electrical Conductivity	136
9.13 Determination of Soil Water Movement	137

9.14 Measurements with Roots in Soil	139
9.15 Hydraulic Lift	143
9.16 Commercially Available Equipment	143
9.17 Summary	145
9.18 Appendix: Biography of John Jaeger	145
 10. Field Capacity, Wilting Point, Available Water, and the Nonlimiting Water Range	 153
10.1 Field Capacity	153
10.2 Wilting Point	156
10.3 Available Water	160
10.4 Nonlimiting Water Range	161
10.5 Biographies of Briggs and Shantz	164
 11. Penetrometers	 171
11.1 Definition, Types of Penetrometers, and Uses	171
11.2 Types of Tests	172
11.3 What Penetrometer Measurements Depend upon	173
11.4 Cone Penetrometer	175
11.5 Appendix: Biography of Champ Tanner	180
 12. Oxygen Diffusion Rate	 185
12.1 The Oxygen Diffusion Rate Method	185
12.2 Electrolysis	188
12.3 Model and Principles of the ODR Method	190
12.4 Method	193
12.5 Appendix: Biography of Michael Faraday	196
 13. Infiltration	 201
13.1 Definition of Infiltration	201
13.2 Four Models of One-Dimensional Infiltration	202
13.3 Two- and Three-Dimensional Infiltration	205
13.4 Redistribution	206
13.5 Tension Infiltrometer or Disc Permeameter	206
13.6 Minidisk Infiltrometer	210
13.7 Measurement of Unsaturated Hydraulic Conductivity and Sorptivity with the Tension Infiltrometer	211
13.8 Measurement of Repellency with the Tension Infiltrometer	215
13.9 Measurement of Mobility with the Tension Infiltrometer	216
13.10 Ellipsoidal Description of Water Flow into Soil from a Surface Disc	221
13.11 Appendix: Biography of John Philip	223

14. Pore Volume	229
14.1 Definitions	229
14.2 Illustration of Breakthrough Curves and Pore Volumes	230
14.3 Mathematical Analysis of Pore Volume	235
14.4 Calculation of a Pore Volume	235
14.5 Pore Volumes Based on Length Units	236
14.6 Miscible Displacement	238
14.7 Relation between Mobile Water Content and Pore Volume	239
14.8 Appendix: Biography of Donald Nielsen	239
15. Root Anatomy and Poiseuille's Law for Water Flow in Roots	243
15.1 Root Anatomy	243
15.2 Poiseuille's Law	252
15.3 Assumptions of Poiseuille's Law	253
15.4 Calculations of Flow Based on Poiseuille's Law	254
15.5 Agronomic Applications of Poiseuille's Law	258
15.6 Appendix: Biography of J.L.M. Poiseuille	261
15.7 Appendix: Biography of Osborne Reynolds	261
15.8 Appendix: Biography of Katherine Esau	262
16. Gardner's Equation for Water Movement to Plant Roots	267
16.1 Description of the Equation	267
16.2 Assumptions	269
16.3 Values for the Rate of Water Uptake	269
16.4 Examples	270
16.5 Effect of Wet and Dry Soil	271
16.6 Effect of Root Radius	272
16.7 Comparison of Matric Potential at Root and in Soil for Different Rates of Water Uptake	273
16.8 Effect of Root Distribution on Wilting	274
16.9 Final Comment	274
16.10 Appendix: Biography of Wildford Gardner	275
17. Stem Anatomy and Pressure—Volume Curves	279
17.1 Stem Anatomy	279
17.2 Measurement of the Components of the Water Potential	284
17.3 Osmotic Potential (Ψ_s)	285
17.4 Theory of Scholander Pressure—Volume Curves	287
17.5 How to Analyze a Pressure—Volume Curve	292
17.6 Turgor Potential (Ψ_p)	295
17.7 Measurement of Plant Water Content and Relative Water Content	296

17.8 Osmometer	302
17.9 Appendix: Biography of Wilhelm Pfeffer	304
17.10 Appendix: Biography of Jacobus van't Hoff	306
17.11 Appendix: Biography of Rudolf Clausius	307
18. Thermocouple Psychrometers	311
18.1 Relation between Water Potential and Relative Humidity	311
18.2 Thermoelectric Effects	312
18.3 Joule Heating	313
18.4 Thermoelectric Power	315
18.5 Relationship between Vapor Pressure and Temperature	315
18.6 Calibration	317
18.7 Importance of Isothermal Conditions when Making Measurements	318
18.8 Types of Thermocouple Psychrometers	319
18.9 Appendix: Biography of J.C.A. Peltier	326
18.10 Appendix: Biography of James Prescott Joule	326
18.11 Appendix: Biography of William Thomson, Baron Kelvin	327
19. Pressure Chambers	333
19.1 Comparison of Measurements Made with the Pressure Chamber and the Thermocouple Psychrometer	333
19.2 Advantages and Disadvantages of the Pressure Chamber	336
19.3 Hydraulic Press	340
19.4 Pump-up Pressure Chamber	341
19.5 Appendix: Biography of Per Scholander	341
19.6 Appendix: Biography of John Boyer	343
20. The Ascent of Water in Plants	347
20.1 The Problem	347
20.2 How Water Gets to the Top of Tall Buildings and Animals	347
20.3 Cohesion Theory	349
20.4 Limitations of the Cohesion Theory	352
20.5 Alternative Theories to the Cohesion Theory	360
20.6 New Techniques to Confirm the Cohesion Theory	363
20.7 Controversy about the Cohesion Theory	364
20.8 Potentials in the Soil-Plant-Atmosphere Continuum	365
20.9 Appendix: Biography of Henry Dixon	368
20.10 Appendix: Biography of John Joly	369
21. Sap Flow	375
21.1 Heat-Pulse Method	375
21.2 Heat-Balance Method	381
21.3 Appendix: Biography of C.H.M. van Bavel	386

- 22. Electrical Analogs for Water Movement through the Soil-Plant-Atmosphere Continuum 391
 - 22.1 The Analogy 392
 - 22.2 Measurement of Resistance with the Wheatstone Bridge 394
 - 22.3 Law of Resistance 395
 - 22.4 Units of Electrical Conductivity 397
 - 22.5 Example of an Electrical Analog Applied to Soil with Wormholes 397
 - 22.6 van den Honert's Equation 398
 - 22.7 Proof of van den Honert's Equation 400
 - 22.8 Appendix: Biography of Georg Ohm 401
 - 22.9 Appendix: Biography of Charles Wheatstone 403
 - 22.10 Appendix: Biographies of Members of the Siemens Family 404
- 23. Leaf Anatomy and Leaf Elasticity 409
 - 23.1 Leaf Anatomy 409
 - 23.2 Internal Water Relations 415
 - 23.3 Elasticity 419
 - 23.4 Elasticity Applied to Plant Leaves 420
 - 23.5 Appendix: Biography of Robert Hooke 426
 - 23.6 Appendix: Biography of Thomas Young 427
- 24. Stomatal Anatomy and Stomatal Resistance 431
 - 24.1 Definition of Stomata and Their Distribution 431
 - 24.2 Stomatal Anatomy of Dicots and Monocots 432
 - 24.3 Stomatal Density 434
 - 24.4 Diffusion of Gases through Stomatal Pores 435
 - 24.5 Guard Cells 436
 - 24.6 Mechanism of Stomatal Opening 438
 - 24.7 Boundary Layer 439
 - 24.8 Leaf Resistances 440
 - 24.9 Measurement of Stomatal Aperture and Stomatal Resistance 444
 - 24.10 Theory of Mass-Flow and Diffusion Porometers 448
 - 24.11 Appendix: Biography of Adolf Fick 449
- 25. Solar Radiation, Black Bodies, Heat Budget, and Radiation Balance 453
 - 25.1 Solar Radiation 453
 - 25.2 Terrestrial Radiation 454
 - 25.3 Definition of a Black Body 455
 - 25.4 Example of a Black Body 458
 - 25.5 Temperature of a Black Body 458
 - 25.6 Gray Body 459
 - 25.7 Spectrum of a Black Body 460

25.8 Sun's Temperature	462
25.9 Earth's Temperature	462
25.10 Comparison of Solar and Terrestrial Radiation	462
25.11 Heat Budget	463
25.12 Radiation Balance	465
25.13 Appendix: Biography of Gustav Kirchhoff	468
25.14 Appendix: Biography of Josef Stefan	470
25.15 Appendix: Biography of Ludwig Boltzmann	470
25.16 Appendix: Biography of Wilhelm Wien	472
 26. Infrared Thermometers	473
26.1 Infrared Thermometers	473
26.2 Definitions	474
26.3 Principles of Infrared Thermometry	475
26.4 Use of a Portable Infrared Thermometer	477
26.5 Calibration of Infrared Thermometers	478
26.6 Advantages of Infrared Thermometers	478
26.7 Appendix: Biography of Ray Jackson	480
 27. Stress-Degree-Day Concept and Crop Water Stress Index	483
27.1 SDD Procedure	483
27.2 Canopy-Minus-Air Temperature and Evapotranspiration	486
27.3 Crop Water Stress Index	488
27.4 How to Calculate the Crop Water Stress Index	493
27.5 Crop Water Stress Index for Alfalfa, Soybeans, and Cotton	493
27.6 Importance of a Wide Range of Vapor Pressure Deficit Values	496
27.7 Normalized Difference Vegetation Index	496
27.8 Appendix: Biography of Sherwood Idso	497
 28. Potential Evapotranspiration	501
28.1 Definition of Potential Evapotranspiration	501
28.2 Factors that Affect Potential Evapotranspiration	501
28.3 Advection	509
28.4 Example Calculation to Determine Potential Evapotranspiration	510
28.5 Appendix: Biography of Howard Penman	512
 29. Water and Yield	515
29.1 de Wit's Analysis	515
29.2 Relationship Between Yield and Transpiration and Yield and Evapotranspiration	518
29.3 Water and Marketable Yield	524
29.4 Water and Quality	524

- 29.5 Crop Water-use Efficiency 526
29.6 Water-use Efficiency Under Elevated Carbon Dioxide 528
29.7 Appendix: Biography of Cornelius de Wit 530

30. Solar Time and Interception of Direct-Beam
Solar Radiation 533

- 30.1 Time of Day 533
30.2 Interception of Direct-Beam Solar Radiation 544
30.3 How to Measure Altitude and Azimuth Angles of Sun 549
30.4 Appendix: Biography of Johannes Kepler 551

Index 555
