Volumes in Series	xxiii

Section I

RNA Protocols

1. Computational Prediction of RNA Secondary Structure	3
Walter N. Moss	
1. Theory	6
2. Equipment	10
3. Protocol I Searching for Homologous RNA Sequences: BLAST	10
4. Step 1(I) Submit Sequence for BLAST Analysis	12
5. Step 2(I) Analyze BLAST Results	14
6. Protocol II Single Sequence RNA Folding	16
7. Step 1(II) Prepare Sequence for Submission to RNAstructure	18
8. Step 2(II) Submit Sequence to RNAstructure	19
9. Step 3(II) Viewing the Results of Secondary Structure Calculation	20
10. Protocol III Single Sequence RNA Folding Including Constraints	21
11. Step 1(III) Enter Constraints for Single Sequence Structure Prediction	26
12. Step 2(III) Submit Sequence to RNAstructure	27
13. Step 3(III) Viewing the Results of Secondary Structure Calculation	27
14. Protocol IV Assessing the Quality of a Prediction: The Partition Function Calculation	27
15. Step 1(IV) Calculate the Secondary Structure Partition Function	34
16. Step 2(IV) Viewing Results of Partition Function Calculation	34
17. Step 3(IV) Annotating Secondary Structures with Base Pair Probabilities	35
18. Protocol V Folding and Aligning RNAs: Dynalign	35
19. Step 1(V) Load Sequences for Dynalign Calculation	38
20. Step 2(V) (Optional) Adding Constraints to Dynalign	38
21. Step 3(V) Submit Sequences for Dynalign Calculation	39
22. Step 4(V) View Results of a Dynalign Calculation	39
23. Protocol VI Aligning and Folding RNAs: RNAalifold	41
24. Step 1(VI) Assemble RNA Sequence Data	43
25. Step 2(VI) Construct RNA Sequence Alignment	44

26. Step 3(VI) Submit Aligned Sequences to the RNAalifold for Consensus Secondary Structure Prediction	45
27. Step 4(VI) Visualizing the Results of an RNAalifold Calculation	46
28. Protocol VII Finding Common RNA Shapes: RNASHAPes	49
29. Step 1(VII) Prepare Sequences for Submission to RNASHAPes (See Protocol II, Steps 1.1–1.6, Save the Sequences in Fasta Format)	50
30. Step 2(VII) Set Up and Run RNASHAPes Calculation	50
31. Protocol VIII Searching for Similar RNA Structures: The RNA Strand Database	52
32. Step 1(VIII) Navigate to RNA Strand Page and Set Up Search	54
33. Step 2(VIII) Analyze the Results of RNA Strand Search	55
34. Step 3(VIII) Search Rfam Database	56
35. Step 4(VIII) Analyze Rfam Results	57
36. Protocol IX Predicting RNA Pseudoknots: pknotsRG	58
37. Step 1(IX) Prepare Sequences for Submission to pknotsRG (See Protocol II, Steps 1.1–1.6, Save the Sequences in Fasta Format)	60
38. Step 2(IX) Set Up and Run pknotsRG Calculation	60
39. Step 3(IX) Visualizing the Results of pknotsRG Calculation	61
Acknowledgments	62
References	63

2. Reverse-Transcription PCR (RT-PCR) 67

Julia Bachman

1. Theory	68
2. Equipment	68
3. Materials	68
4. Protocol	69
5. Step 1 Unwinding RNA	70
6. Step 2 Reverse Transcription Reaction	70
7. Step 3 PCR Reaction	72
8. Step 4 Analysis of Product	73
References	74

3. Northern Blotting 75

Shan L. He and Rachel Green

1. Theory	75
2. Equipment	76
3. Materials	77
4. Protocol	80
5. Step 1 Separate RNA by Denaturing Agarose Gel Electrophoresis	81

6. Step 2 Transfer RNA from the Gel to a Nylon Membrane	82
7. Step 3 Radiolabel the Probe and Hybridize it to the Membrane	84
References	87

4. Explanatory Chapter: Nuclease Protection Assays **89**

Elizabeth Eyster

1. Theory	90
2. Equipment	91
3. Materials	91
4. Protocol	92
5. Step 1 Hybridization of Labeled Probes and RNA Sample	93
6. Step 2 Nuclease Digestion	94
7. Step 3 Nuclease Inactivation and Probe Recovery	95
8. Step 4 Electrophoretic Separation and Detection	96
9. Interpretation and Troubleshooting	97
References	97

Section II

***In Vitro* Transcription**

5. *In Vitro* Transcription from Plasmid or PCR-amplified DNA **101**

Julie L. Brunelle and Rachel Green

1. Theory	102
2. Equipment	103
3. Materials	103
4. Protocol	105
5. Step 1 Phenol Extract DNA Template	106
6. Step 2 T7 RNA Polymerase <i>in vitro</i> Transcription Reaction	107
7. Step 3 Phenol Extraction of Transcription Reaction	110
8. Step 4 Column Purification of RNA Transcript	111
References	114
Source References	114

Section III

Measurement of RNA Synthesis and Decay Rates

6. Measurement of *In Vivo* RNA Synthesis Rates **117**

David S. McPheeters and Jo Ann Wise

1. Theory	118
2. Equipment	120

3. Materials	120
4. Protocol	124
5. Step 1 Preparation of Immobilized DNA or RNA	125
6. Step 2 <i>In-Vivo</i> ^{32}P -Labeling of Nascent Transcripts	127
7. Step 3 Isolation of Total RNA	129
8. Step 4 Hybridization of Labeled RNA to Immobilized Probes	131
References	134
Source References	135

7. Method for Measuring mRNA Decay Rate in *Saccharomyces cerevisiae* 137

Wenqian Hu and Jeff Collier

1. Theory	138
2. Equipment	139
3. Materials	140
4. Protocol	143
5. Step 1 Turn Off mRNA Transcription and Remove Samples of Yeast at Various Time Points	143
6. Step 2 RNA Extraction from Yeast Cells	145
7. Step 3 Formaldehyde Agarose Denaturing Gel Electrophoresis and Northern Transfer	147
8. Step 4 Prepare a Radiolabeled Oligonucleotide Probe	151
9. Step 5 Hybridize Probe to Membrane to Detect the Reporter mRNA	151
10. Step 6 Strip the Membrane	152
11. Step 7 Hybridize the Membrane to a Probe to Detect <i>SCR1</i> RNA	153
12. Step 8 Calculate the mRNA Half-Life	154
References	155
Source References	155

Section IV

Polysome Analysis

8. Analysis of Polysomes from Bacteria 159

Daoming Qin and Kurt Fredrick

1. Theory	160
2. Equipment	163
3. Materials	163
4. Purified Water	164
5. Protocol	165
6. Step 1 Preparation of Sucrose Gradients	166

7. Step 2 Preparation of Cell Lysates	166
8. Step 3 Sedimentation of Components of the Lysate Through Sucrose Gradients	169
9. Step 4 Pump Gradients	170
References	170
9. Polysome Profile Analysis – Yeast	173
Martin Pospíšek and Leos Valášek	
1. Theory	174
2. Equipment	175
3. Materials	176
4. Protocol	177
5. Step 1 Grow Yeast Cultures	178
6. Step 2 Preparation of Yeast Whole Cell Extracts	178
7. Step 3 Polysome Profile Analysis using Sucrose Density Gradient Centrifugation	179
References	181
10. Polysome Analysis of Mammalian Cells	183
Shan L. He and Rachel Green	
1. Theory	184
2. Equipment	184
3. Materials	185
4. Protocol	186
5. Step 1 Immobilize Ribosomes on mRNA in Cells	188
6. Step 2 Prepare Cell Lysate for Polysome Analysis	188
7. Step 3 Size Fractionation of Polysomes	189
References	192
11. Polysome Analysis for Determining mRNA and Ribosome Association in <i>Saccharomyces cerevisiae</i>	193
Wenqian Hu and Jeff Collier	
1. Theory	194
2. Equipment	195
3. Materials	196
4. Protocol	198
5. Step 1 Grow Yeast Cells for Polysome Analysis	199
6. Step 2 Prepare Sucrose Gradient	201
7. Step 3 Cell Lysis and Sedimentation Analysis	201

8. Step 4 Fractionate the Sucrose Gradient	203
References	206
Source References	206

Section V

Reverse Transcription

12. Oligo(dT)-primed RT-PCR Isolation of Polyadenylated RNA Degradation Intermediates	209
Shimyn Slomovic and Gadi Schuster	
1. Theory	210
2. Equipment	212
3. Materials	212
4. Protocol	215
5. Step 1 RNA Purification	215
6. Step 2 Oligo(dT)-Primed Reverse Transcription	217
7. Step 3 First Round PCR (PCR #1)	218
8. Step 4 Gel Purification of PCR Products	219
9. Step 5 Second Round PCR (PCR #2)	220
10. Step 6 Gel Purification	221
11. Step 7 T/A Clone the PCR Products	221
12. Step 8 Electroporation and Plating	222
13. Step 9 Colony Screening by PCR	224
14. Step 10 Plasmid DNA Isolation and DNA Sequencing	225
References	226
Source References	226
13. Circularized RT-PCR (cRT-PCR): Analysis of the 5' Ends, 3' Ends, and poly(A) Tails of RNA	227
Shimyn Slomovic and Gadi Schuster	
1. Theory	229
2. Equipment	230
3. Materials	232
4. Protocol	236
5. Step 1 RNA Purification	236
6. Step 2 Circularization of RNA Molecules	237
7. Step 3 Reverse Transcription Using a Gene-Specific Reverse Primer (R1)	238
8. Step 4 PCR Using Forward Primer (F1) and Reverse Primer (R2)	239
9. Step 5 Gel Purification of PCR Products	241

10. Step 6 Second Round PCR	243
11. Step 7 Gel Purification of PCR Products	243
12. Step 8a T/A Clone the Second Round PCR Products	243
13. Step 9a Electroporate and Plate Bacteria	244
14. Step 10a Screen Clones by Colony PCR	245
15. Step 11a Plasmid DNA Isolation and DNA Sequencing	246
16. Step 8b Radiolabel a Primer and Use it in PCR	246
17. Step 9b Analyze PCR Products by Polyacrylamide Gel Electrophoresis	248
References	250
Source References	251

Section VI

RNA Labeling

14. RNA Radiolabeling 255

Rishi Porecha and Daniel Herschlag

1. Theory	256
2. Equipment	257
3. Materials	259
4. Protocol	262
5. Step 1 5'-Dephosphorylation of Transcribed RNAs Using Shrimp Alkaline Phosphatase and 5'-Labeling with T4 Polynucleotide Kinase	264
6. Step 2 Dephosphorylation of RNAs with 2', 3'-Cyclic Phosphates Using T4 Polynucleotide Kinase Followed by Phenol/Chloroform Extraction	267
7. Step 3 3'-Labeling with <i>E. coli</i> DNA Polymerase Klenow Fragment	268
8. Step 4 Preparing the Denaturing Polyacrylamide Gel	270
9. Step 5 PAGE Purification and RNA Extraction	272
References	279

15. Fluorescently Labeling Synthetic RNAs 281

Max Greenfeld and Daniel Herschlag

1. Theory	282
2. Equipment	284
3. Materials	285
4. Protocol	286
5. Step 1 Precipitate Unlabeled Oligonucleotide	287
6. Step 2 Test-Labeling Reactions (Optional)	288
7. Step 3 Large-Scale Labeling Reaction and Gel Purification	291
References	297

Section VII**RNA Purification**

16. Analysis of RNA by Analytical Polyacrylamide Gel Electrophoresis	301
Alexey Petrov, Albet Tsa, and Joseph D. Puglisi	
1. Theory	302
2. Equipment	303
3. Materials	304
4. Protocol	306
5. Step 1 Preparing the Gel	307
6. Step 2 Running the Gel	308
7. Step 3 Visualizing the RNA	310
References	313
17. RNA Purification by Preparative Polyacrylamide Gel Electrophoresis	315
Alexey Petrov, Tinghe Wu, Elisabetta Viani Puglisi, and Joseph D. Puglisi	
1. Theory	316
2. Equipment	318
3. Materials	318
4. Protocol	320
5. Step 1 Preparing the Gel	321
6. Step 2 Running the Gel	322
7. Step 3 Visualizing the RNA	324
8. Step 4A RNA Extraction Using the 'Crush and Soak' Method	326
9. Step 4B RNA Extraction by Electroelution	327
References	330
18. Explanatory Chapter: Nucleic Acid Concentration Determination	331
Sarah Kolitz and Jon Lorsch	
1. Theory	332
2. Equipment	332
3. Materials	333
4. Protocol	333
5. Step 1 Determine Parameters to Use in Beer's Law	333
6. Step 2 Determine the Absorbance Value	334
7. Step 3 Use Beer's Law to Calculate the Sample Concentration	335
References	336

19. RNA Purification – Precipitation Methods 337

Sarah E. Walker and Jon Lorsch

1. Theory 338
2. Equipment 339
3. Materials 339
4. Protocols 340
5. Method 1 Ethanol Precipitation of RNA 340
6. Method 2 Lithium Chloride Precipitation 342
- References 343

Section VIII**RNA Sequencing****20. Reverse Transcriptase Dideoxy Sequencing of RNA 347**

Sarah E. Walker and Jon Lorsch

1. Theory 348
2. Equipment 348
3. Materials 349
4. Protocol 351
5. Step 1 Label Primer 352
6. Step 2 Anneal Primer 353
7. Step 3 Primer Extension and Chain Termination 354
8. Step 4 Resolution of Labeled Products by Urea-PAGE 354
- References 359

Section IX**RNA Structure Experimental Analysis****21. RNA Structure Experimental Analysis – Chemical Modification 363**

Zhili Xu and Gloria Culver

1. Theory 364
2. Equipment 365
3. Materials 366
4. Protocol 370
5. Step 1 Modification of the Complex 371
6. Step 2 RNA Extraction 374
7. Step 3 Quantification and Normalization of RNA 375
8. Step 4 Primer Extension 377
- References 380

22. Structural Analysis of RNA Backbone Using In-Line Probing	381
Ali Nahvi and Rachel Green	
1. Theory	382
2. Equipment	382
3. Materials	383
4. Protocol	387
5. Step 1 <i>in vitro</i> RNA Transcription	387
6. Step 2 Labeling RNA at 5' Terminus with ^{32}P	389
7. Step 3 In-line Probing Reaction	392
References	397
Author Index	399
Subject Index	403
