Volumes in Series	xxiii

Section I

Cell Protocols: Basic Microbiological Techniques

1. Pouring Agar Plates and Streaking or Spreading to Isolate Individual Colonies	3
Elizabeth Eyler	
1. Theory	4
2. Equipment	4
3. Materials	5
4. Protocol	5
5. Step 1 Preparation of LB-Agar Solution	6
6. Step 2 Pouring Agar Plates	8
7. Step 3 Streaking for Individual Colonies	9
8. Step 4 Spreading Cells on Agar Plates	12
References	14
2. Storage of Bacteria and Yeast	15
Cheryl M. Koh	
1. Theory	15
2. Equipment	16
3. Materials	16
4. Protocol	18
5. Protocol A Cryopreservation of Bacterial Cultures	18
6. Step 1A Grow Bacterial Cultures	19
7. Step 2A Freeze the Bacterial Cells	19
8. Protocol B Cryopreservation of Yeast	19
9. Step 1B Grow Yeast Cultures	20
10. Step 2B Freeze the Yeast Cells	21
References	21

Section II**Cell Protocols: Cellular Fractionation**

3. Cellular Fractionation – Mammalian Cells	25
Joerg von Hagen and Uwe Michelsen	
1. Theory	25
2. Equipment	26
3. Materials	27
4. Protocol	28
5. Step 1 Subcellular Mammalian Cell Fractionation	28
Source References	30
4. Cellular Fractionation – Yeast Cells	31
Joerg von Hagen and Uwe Michelsen	
1. Theory	31
2. Equipment	32
3. Materials	33
4. Protocol	35
5. Step 1 Yeast Protoplast Formation	35
6. Step 2 Subcellular Fractionation of Yeast Protoplasts	37
Source References	38

Section III**Cell Protocols: Knock-outs and Gene Replacements**

5. Yeast-Gene Replacement Using PCR Products	43
Megan Bergkessel, Christine Guthrie, and John Abelson	
1. Theory	44
2. Equipment	44
3. Materials	44
4. Protocol	46
5. Step 1 Generation of a Linear Integrating Construct by PCR	51
6. Step 2 Visualization of Product on an Agarose Gel	52
7. Step 3 Transforming Yeast with a Linear PCR Product for Integration	54
8. Step 4 Verifying Appropriate Integration in Colonies Growing on Selective Media	55
Source References	55

6. Measuring RNAi Knockdown using qPCR	57
Stuart Milstein, Michael Nguyen, Rachel Meyers, and Antonin de Fougères	
1. Theory	58
2. Equipment	60
3. Materials	60
4. Protocol	61
5. Step 1 Transfection	62
6. Step 2 RNA Isolation Using MagMAX™ Magnetic Bead Purification	66
7. Step 3 cDNA Synthesis	69
8. Step 4 qPCR	71
9. Step 5 qPCR Analysis	74
References	77
7. Recombineering: Using Drug Cassettes to Knock out Genes <i>in vivo</i>	79
James A. Sawitzke, Lynn C. Thomason, Mikhail Bubunenkov, Xintian Li, Nina Costantino, and Donald L. Court	
1. Theory	81
2. Equipment	83
3. Materials	83
4. Protocol	87
5. Step 1 Design Construct and Order Primers	88
6. Step 2 Set Up and Generate Linear Substrate by PCR	91
7. Step 3 Preparing Cells Competent for Recombineering	93
8. Step 4 Electrotransformation of Linear Substrates into the Recombineering-Ready Cells	97
9. Step 5 Selecting for Knockout Mutations	98
10. Step 6 Confirming Knockout Mutations	99
References	101
8. Gene Knockouts, <i>in vivo</i> Site-Directed Mutagenesis and Other Modifications Using the <i>Delitto Perfetto</i> System in <i>Saccharomyces cerevisiae</i>	103
Samantha Stuckey and Francesca Storici	
1. Theory	105
2. Equipment	111
3. Materials	111

4. Protocol	115
5. Step 1 PCR Amplification of the CORE Cassette	116
6. Step 2 Agarose Gel Electrophoresis to Visualize the Product of PCR	117
7. Step 3 Concentration of the PCR Product	118
8. Step 4 Insertion of the CORE Cassette into the Chosen Genetic Locus	119
9. Step 5 Colony PCR of the Transformants	122
10. Step 6 Transformation Using DNA Oligonucleotides to Generate the Desired mutation(s)	126
References	130
Source References	130
9. Gene Targeting and Site-Specific Recombination in Mouse ES Cells	133
Konstantinos Anastassiadis, Frank Schnütgen, Harald von Melchner, and A. Francis Stewart	
1. Theory	134
2. Equipment	136
3. Materials	137
4. Protocol	141
5. Step 1 Delivery of Targeting Vector into ES Cells by DNA Transfection	141
6. Step 2 Picking and Expansion of Colonies	144
7. Step 3 Isolation of DNA from 96-Well Plates	146
8. Step 4 Recombinase Delivery into ES Cells by DNA Transfection	148
9. Step 5 Screen the Colonies for Complete Recombination and Removal of the Selection Cassette	152
References	154
Source References	155
10. Recombineering: Highly Efficient <i>in vivo</i> Genetic Engineering using Single-strand Oligos	157
James A. Sawitzke, Lynn C. Thomason, Mikhail Bubunencko, Xintian Li, Nina Costantino, and Donald L. Court	
1. Theory	158
2. Equipment	162
3. Materials	164
4. Protocol	165
5. Step 1 Designing the Oligo for Recombineering	165
6. Step 2 Preparing Cells Competent for Recombineering	168
7. Step 3 Electrotransformation of the Oligo into the Recombineering-ready Cells	171

8. Step 4 Plating Cells to Screen for Mutations	172
9. Step 5 Screening for the Final Construct	174
References	177

Section IV

Cell Protocols: Microbiological Media

11. Growth Media for *E. coli* 181

Juliane C. Lessard

1. Theory	181
2. Equipment	183
3. Materials	183
4. Recipe 1 LB	184
5. Recipe 2 TB	185
6. Recipe 3 2x YT	186
7. Recipe 4 SOC	187
References	189

12. *Saccharomyces Cerevisiae* Growth Media 191

Jessica S. Dymond

1. Theory	192
2. Equipment	193
3. Materials	193
4. Protocol	197
5. Recipe 1 Preparation of YPD	197
6. Recipe 2 Preparation of Synthetic Complete (Drop-out) Media	199
7. Recipe 3 Preparation of Minimal Media	200
8. Recipe 4 Preparation of Sporulation Media	203
References	204

Section V

Cell Protocols: Preparation of Slides for Microscopy

13. Immunohistochemistry on Freely Floating Fixed Tissue Sections 207

Julia Bachman

1. Theory	208
2. Equipment	208
3. Materials	208
4. Protocol	210

5. Step 1 Pretreatment of Tissue Section	210
6. Step 2 Blocking Nonspecific Binding	211
7. Step 3 Primary Antibody Labeling	212
8. Step 4 Secondary Antibody Labeling	213
9. Step 5 Mount Labeled Tissue Section on Microscope Slide	214
14. Preparation of Slides for Microscopy from Frozen Tissue Sections	217
Julia Bachman	
1. Theory	218
2. Equipment	218
3. Materials	218
4. Protocol	219
5. Step 1A Submerging Cut-Tissue Sections in Cryoprotectant Media	219
6. Step 1B Embedding Tissue Samples	221
7. Step 2 Cryostat Sectioning	221
8. Step 3 Preparation of Slides for Immunohistochemistry	223
References	224
15. Preparation of Formalin-fixed Paraffin-embedded Tissue for Immunohistochemistry	225
Kirstie Canene-Adams	
1. Theory	226
2. Equipment	227
3. Materials	227
4. Protocol	228
5. Step 1 Fixation of Tissue	229
6. Step 2 Tissue Processing and Embedding	230
7. Step 3 Tissue Sectioning	232
References	233
16. Preparation of Cells for Microscopy using Cytospin	235
Cheryl M. Koh	
1. Theory	236
2. Equipment	236
3. Materials	236
4. Protocol	236
5. Step 1 Collecting Cells	237

6. Step 2 Cytospin	237
7. Step 3 Fixation and Drying	239
References	240
17. Preparation of Cells for Microscopy using Chamber Slides and Coverslips	241
Cheryl M. Koh	
1. Theory	242
2. Equipment	242
3. Materials	242
4. Protocol	243
5. Step 1 Collecting & Seeding Cells	244
6. Step 2 Treatment of Cells	245
7. Step 3 Fixation of Cells	246
References	247
18. Preparation of Cells for Microscopy using 'Cell Blocks'	249
Cheryl M. Koh	
1. Theory	250
2. Equipment	250
3. Materials	250
4. Protocol	251
5. Step 1 Collection and Fixation of Cells	251
6. Step 2 Making Cell Plugs	252
7. Step 3 Paraffin Embedding and Sectioning	254
References	255
Section VI	
Lipid and Carbohydrate Protocols	
19. Enzymatic Deglycosylation of Glycoproteins	259
Min-Sung Kim and Dan Leahy	
1. Theory	260
2. Equipment	260
3. Materials	260
4. Protocol	261
5. Step 1 Enzymatic Deglycosylation of Glycoprotein	261
References	263
Source References	263

Section VII

Lipid and Carbohydrate Protocol: Making Vesicles and Micelles

20. Preparation of Fatty Acid or Phospholipid Vesicles by Thin-film Rehydration	267
Ting F. Zhu, Itay Budin, and Jack W. Szostak	
1. Theory	268
2. Equipment	268
3. Materials	268
4. Protocol	269
5. Step 1 Formation of a Thin Lipid Film	270
6. Step 2 Rehydration of the Thin Lipid Film	272
References	274
Source References	274
21. Vesicle Extrusion Through Polycarbonate Track-etched Membranes using a Hand-held Mini-extruder	275
Ting F. Zhu, Itay Budin, and Jack W. Szostak	
1. Theory	276
2. Equipment	276
3. Materials	276
4. Protocol	277
5. Step 1 Assemble the Extrusion Apparatus	278
6. Step 2 Load the Gas-Tight Syringes	280
7. Step 3 Extrusion to Yield Monodisperse Vesicles	281
References	282
22. Preparation of Fatty Acid Micelles	283
Ting F. Zhu, Itay Budin, and Jack W. Szostak	
1. Theory	283
2. Equipment	284
3. Materials	284
4. Protocol	285
5. Step 1 Dissolve Fatty Acid in NaOH Solution	285
6. Step 2 Addition of Fatty Acid Micelles to Vesicles	287
References	287
Source References	288

Section VIII TUTORIALS**Other Protocols****23. Reverse-phase HPLC Analysis and Purification of Small Molecules 291**

Kirstie Canene-Adams

1. Theory 292
2. Equipment 293
3. Materials 294
4. Protocol 295
5. Step 1 Break Down the Matrix of the Samples that Contain the Molecule of Interest 295
6. Step 2 Extraction of Carotenoids from the Samples 297
7. Step 3 Carotenoid Analysis on a Reverse-Phase HPLC-PDA System 299
- References 300
- Source References 301

24. Thin Layer Chromatography 303

Marina Santiago and Scott Strobel

1. Theory 304
2. Equipment 306
3. Materials 307
4. Protocol 311
5. Step 1 Preparing the TLC Plates 318
6. Step 2 Sample Application 319
7. Step 3 Development of the Plate 320
8. Step 4 Detection and Visualization of the Sample 322
- References 323

25. ATP and GTP Hydrolysis Assays (TLC) 325

Vaishnavi Rajagopal and Jon R. Lorsch

1. Theory 326
2. Equipment 327
3. Materials 327
4. Protocol 329
5. Step 1 Steady-state ATP Hydrolysis 330
6. Step 2 Preparation of the TLC Plate and Chamber 331
7. Step 3 TLC Separation of the Reaction 332
- References 334
