Preface

xvii

Section I

Protein Protocols/Protein Precipitation

1. TCA Precipitation	3
Laura Koontz	
1. Theory	4
2. Equipment	4
3. Materials	4
4. Protocol	6
5. Step 1A Trichloroacetic Acid Precipitation	6
6. Step 1B Deoxycholate-Trichloroacetic Acid Precipitation	7
References	10

Section II

Protein Protocols/Protein Pull-Down Methods

2. Coimmunoprecipitation of Proteins from Yeast	13
Erica Gerace and Danesh Moazed	
1. Theory	14
2. Equipment	15
3. Materials	15
4. Protocol	17
5. Step 1 Preparation of Whole Cell Lysates	18
6. Step 2 Normalization of Cell Lysates	20
7. Step 3 Coimmunoprecipitation	20
8. Step 4 Wash and Elute the Immunoprecipitates	23
9. Step 5 Analysis of Immunoprecipitations	24
References	26
3. Coupling Antibody to Cyanogen Bromide-Activated Sepharose	27
Jennifer M. Kavran and Daniel J. Leahy	
1. Theory	28
2. Equipment	28

3. Materials	28
4. Protocol	30
5. Step 1 Preparation of Antibody and Resin	30
6. Step 2 Coupling the Antibody to the Resin	32
7. Step 3 Quench the Reaction	32
8. Step 4 Wash the Resin	33
References	34

4. Analysis of Protein-Protein Interactions by Coimmunoprecipitation 35

Peter van der Geer

1. Theory	36
2. Equipment	38
3. Materials	39
4. Protocol	42
5. Step 1 Isolation of the Protein of Interest by Immunoprecipitation	42
6. Step 2 Detection of the Binding Partner by Immunoblotting	44
References	46

Section III

Protein Protocols/Protein Purification

5. Use and Application of Hydrophobic Interaction Chromatography for Protein Purification 51

Justin T. McCue

1. Theory	52
2. Equipment	56
3. Materials	56
4. Protocol	58
5. Step 1 Column Equilibration	59
6. Step 2 Column Loading	60
7. Step 3 Product Elution	61
8. Step 4 Adsorbent Regeneration and Sanitization	63
References	64
Source References	65

6. Hydroxyapatite Chromatography: Purification Strategies for Recombinant Proteins 67

Larry J. Cummings

1. Theory	68
2. Equipment	69

3. Materials	69
4. Protocol	72
5. Step 1 Purification Protocol Screening by Linear Salt Gradient	75
6. Step 2 Purification Protocol Using a Step Gradient	77
7. Step 3 Purification Protocol Using a Step Gradient and Simplified Analytics	79
8. Step 4 Offline pH Measurement and Calcium ion Analysis	80
9. Step 5 SEC Profile for the Collected mAb Fraction and Regeneration Fraction	81
References	83
7. Salting out of Proteins Using Ammonium Sulfate Precipitation	85
Krisna C. Duong-Ly and Sandra B. Gabelli	
1. Theory	86
2. Equipment	87
3. Materials	88
4. Protocol	88
5. Step 1 Removal of Proteins Marginally Soluble in $(\text{NH}_4)_2\text{SO}_4$	89
6. Step 2 Precipitation of the Protein of Interest	89
References	94
8. Using Ion Exchange Chromatography to Purify a Recombinantly Expressed Protein	95
Krisna C. Duong-Ly and Sandra B. Gabelli	
1. Theory	96
2. Equipment	98
3. Materials	98
4. Protocol	99
5. Step 1 Equilibration of the Column	99
6. Step 2 Binding of the Protein Sample	101
7. Step 3 Removal of Unbound Proteins	101
8. Step 4 Elution of the Bound Protein	102
References	103
9. Gel Filtration Chromatography (Size Exclusion Chromatography) of Proteins	105
Krisna C. Duong-Ly and Sandra B. Gabelli	
1. Theory	106
2. Equipment	108
3. Materials	108

4. Protocol	109
5. Step 1 Standardization of the Gel Filtration Column	110
6. Step 2 Determination of the Sizes of Protein Species in a Sample	112
References	114

Section IV

Protein Protocols/Purification of Membrane Proteins

10. Expression and Purification of Membrane Proteins 117

Jan Kubicek, Helena Block, Barbara Maertens, Anne Spiestersbach
and Jörg Labahn

1. Theory	118
2. Equipment	121
3. Materials	121
4. Protocol	124
5. Step 1 Transformation of <i>E. coli</i>	126
6. Step 2 Cultivation of <i>E. coli</i> – Screening for the Optimal Expression Conditions	126
7. Step 3 Scale-Up Expression of a Membrane Protein Using the Optimal Expression Conditions	130
8. Step 4 Screening Detergents to Determine Optimal Solubilization of Membrane Protein	131
9. Step 5 Scale-Up the Solubilization of the Membrane Protein	134
10. Step 6 Purification of Membrane Proteins Using Ni-NTA Superflow	136
References	140

11. Explanatory Chapter: Choosing the Right Detergent 141

Dirk Linke

1. Theory	142
2. Equipment	142
3. Materials	142
4. Protocol	144
5. Using Detergents with Polyacrylamide Gel Electrophoresis	145
6. Using Detergents in Chromatography	146
7. Using Detergents with Optical Spectroscopy Techniques	147
8. Using Detergents with Mass Spectrometry Techniques	147
9. Using Detergents with Nuclear Magnetic Resonance (NMR)	148

10. Using Detergents in Protein Crystallization
References

148

148

Section V

Protein Protocols/SDS PAGE

12. One-dimensional SDS-Polyacrylamide Gel Electrophoresis (1D SDS-PAGE)

151

Julie L. Brunelle and Rachel Green

1. Theory 152
2. Equipment 152
3. Materials 153
4. Protocol 154
5. Step 1 Casting an SDS-PAGE Gel: Resolving Gel 154
6. Step 2 Casting an SDS-PAGE Gel: Stacking Gel 155
7. Step 3 Running an SDS-PAGE Gel 157
- References 159

13. Coomassie Blue Staining

161

Julie L. Brunelle and Rachel Green

1. Theory 162
2. Equipment 162
3. Materials 162
4. Protocol 163
5. Step 1 Stain a Gel Using Coomassie Blue 163
6. Step 2 Destain the Gel to Reduce Background Staining 165
- Source References 167

14. Silver Staining of SDS-polyacrylamide Gel

169

Jennifer M. Kavan and Daniel J. Leahy

1. Theory 170
2. Equipment 170
3. Materials 170
4. Protocol 172
5. Step 1 Fix the Gel 172
6. Step 2 Stain the Gel 173
7. Step 3 Preserve the Gel 175
- References 176

Section VI

Protein Protocols/Standard *in vitro* Assays for Protein-Nucleic Acid Interactions

15. Standard <i>In Vitro</i> Assays for Protein-Nucleic Acid Interactions – Gel Shift Assays for RNA and DNA Binding	179
Sarah F. Mitchell and Jon R. Lorsch	
1. Theory	180
2. Equipment	184
3. Materials	184
4. Protocol	186
5. Step 1 Radiolabeling the Nucleic Acid Probe	187
6. Step 2 Bind Protein and Nucleic Acid	188
7. Step 3 Preparation of Polyacrylamide Gel	190
8. Step 4 Loading and Running Gel	191
9. Step 5 Analysis of Gel	192
References	195
Source References	196
16. Protein Filter Binding	197
Sarah Kolitz and Jon R. Lorsch	
1. Theory	198
2. Equipment	198
3. Materials	198
4. Protocol	199
5. Step 1 Assemble Binding Reactions	201
6. Step 2 Quantify Binding	202
7. Step 3 Process Binding Data	204
References	205
Source References	205

Section VII

Protein Protocols/Troubleshooting Protein Expression

17. Explanatory Chapter: Troubleshooting Recombinant Protein Expression: General	209
Krisna C. Duong-Ly and Sandra B. Gabelli	
1. Theory	210
2. Equipment	213
3. Materials	213

4. Protocol	214
5. Step 1 Monitoring <i>E. coli</i> cell Growth Before Induction	214
6. Step 2 Induction of Expression	216
7. Step 3 Monitoring <i>E. coli</i> Cell Growth After Induction	217
8. Step 4 Measurement of Protein Production	218
9. Step 5 Further Troubleshooting in <i>E. coli</i>	219
10. Step 6 Eukaryotic Expression Systems	223
References	227
Source References	229
 18. Explanatory Chapter: Troubleshooting Protein Expression: What to do When the Protein is not Soluble	 231
Krisna C. Duong-Ly and Sandra B. Gabelli	
1. Theory	232
2. Equipment	232
3. Materials	233
4. Protocol	234
5. Step 1 Centrifuge the Culture	235
6. Step 2 Lyse the Cells	235
7. Step 3 Remove the Cell Debris	237
8. Step 4 Analyze Protein Expression by SDS-PAGE	237
9. Step 5 Troubleshooting the Lack of Soluble Protein Expressed	239
References	244
 Section VIII	
Protein Protocols/Western Blotting	
19. Western Blotting using Chemiluminescent Substrates	251
Alice Alegria-Schaffer	
1. Theory	252
2. Equipment	252
3. Materials	252
4. Protocol	253
5. Step 1: Protein Transfer to a Membrane	254
6. Step 2: Western Blot Detection using a Chemiluminescent Substrate	256
References	258
Source References	259
