Preface

xv

1. Philosophy of Science

1

Bjørn Hofmann and Søren Holm

1.1 Introduction	1
1.2 Philosophy of the Natural Sciences	1
1.3 What Is Science? Differentiating Science from Nonscience	2
1.4 Knowledge and Truth: What is Knowledge and What Constitutes a Scientific Fact?	4
1.5 The Glue That Holds the World Together: Causation	7
1.6 Scientific Explanation	15
1.7 Modes of Inference	19
1.8 What Science Is About	20
1.9 Scientific Rationality	23
1.10 Hypothesis Testing	23
1.11 The Aim of Science: Reducing Uncertainty	29
1.12 The Empirical Turn in the Philosophy of Science: Science In Society	30
1.13 Philosophy of the Social Sciences	32
1.14 Interpretation, Understanding, and Explanation	33
1.15 The Hermeneutic Circle, Horizon of Understanding, and "Double Hermeneutics"	34
1.16 Power, Ideology, and Interests	36
1.17 Validity	36
1.18 Reductionism and Emergence	37
1.19 Generalization	38
Questions to Discuss	39
References	40
Further Reading	41

2. Ethics and Scientific Conduct

43

Søren Holm, Bjørn Hofmann and Petter Laake

2.1 Why the Current Focus on Scientific Misconduct?	43
2.2 What Do We Know About Scientific Misconduct?	44

2.3 What Is Wrong with Scientific Misconduct?	47
2.4 Scientific Conduct and Misconduct	50
2.5 Scientific Misconduct That Affects the Truth Claims of Scientific Findings	53
2.6 Authorship	57
2.7 Salami, Imalas, and Duplicate Publication	61
2.8 The Investigation, Prevention, and Punishment of Scientific Misconduct	62
Questions to Discuss	65
Appendix 1: ICMJE Recommendations on the Role of Authors and Contributors	66
References	69
Further Reading	70
3. Ethics in Human and Animal Studies	71
Søren Holm and Bjørn Reino Olsen	
3.1 Basic Principles of Human Biomedical Research Ethics	71
3.2 International Regulation	73
3.3 The Ethics of Animal Research	83
Questions to Discuss	86
References	87
Further Reading	87
4. Research Strategies, Planning, and Analysis	89
Haakon Breien Benestad and Petter Laake	
4.1 Introduction	89
4.2 Identifying Scientific Problems	90
4.3 The Experimental Design	92
4.4 Data Types	94
4.5 Methods and Experimental Techniques	97
4.6 Experimental Research Checklist	99
4.7 Repeatability, Reproducibility, and Reliability	105
4.8 Multifactorial Relationships and Observational Studies	110
4.9 Validity, Effect Estimate, and Choice of Statistical Test	112
4.10 Research Protocol	115
4.11 Experimental Routines	122
Questions to Discuss	123
References	124
Further Reading	124

5. Literature Searches and Reference Management 125*Anne-Marie B. Haraldstad and Ellen Christophersen*

5.1	Information Literacy	125
5.2	Literature Searches	125
5.3	Establishment of a Search Query	133
5.4	Selection of Relevant Sources of Information	136
5.5	Search Techniques	137
5.6	Critical Assessment	143
5.7	Bibliometric Measures	145
5.8	Principal Scientific Bibliographic Databases	147
5.9	Staying Up to Date	152
5.10	Medical and Scientific Internet Search Engines	154
5.11	Finding Research Protocols and Ongoing Projects	156
5.12	Reference Management	157
5.13	Open Access Publication, Copyright, and Self-Archiving	161
	Questions to Discuss	164
	References	164
	Further Reading	165

6. Basic Medical Science 167*Bjorn Reino Olsen and Haakon Breien Benestad*

6.1	Introduction	167
6.2	Long-Term Goals and Specific Aims	168
6.3	Background and Significance	171
6.4	Experimental Strategies and Methods	173
6.5	Levels of Research—from Organisms to Cells	174
6.6	Research on Experimental Animals	176
6.7	The Three Rs	177
6.8	Animal Models	179
6.9	Mouse Models for Studies of Mammalian Development and Disease	180
6.10	Legislation	186
6.11	Notes on the Use of Experimental Animals	187
6.12	Commonly Used Experimental Animals	188
6.13	Cell and Tissue Culture	191
6.14	An Overview of Selected Technical Developments	194
6.15	Applications of Cell Culture	197
6.16	Manipulation of Cultured Cells	200
6.17	Possibilities Provided by Molecular Biological Techniques	205

Questions to Discuss	210
References	210
Further Reading	211
7. Translational Medical Research	213
Bjorn Reino Olsen, Mahmood Amiry-Moghaddam and Ole Petter Ottersen	
7.1 Introduction	213
7.2 An Old Success Story—Aspirin	213
7.3 Research Provides a Path to Understanding Mechanisms and New Drugs	216
7.4 The Importance of Understanding Drug Metabolism—the Rise and Fall of Clopidogrel (Plavix)	217
7.5 The Need for More Translational Medical Research	218
7.6 Translational Medical Research and the Development of Orphan Drugs	220
7.7 From Rare Disorders to Common Disorders	223
7.8 Target-Based Drug Development—Aquaporins	223
7.9 Training of Investigators for Translational Medical Research	228
7.10 Collaboration between Academia and the Pharmaceutical Industry	230
Questions to Discuss	231
References	232
Further Reading	235
8. Clinical Research	237
Eva Skovlund and Kjell Magne Tveit	
8.1 Introduction	237
8.2 The Research Process—Important Steps	238
8.3 Controlled Clinical Trials	239
8.4 Drug Development	240
8.5 Clinical Trial Protocol	242
8.6 Trial Designs	243
8.7 Target Population	244
8.8 Historical Controls	245
8.9 Randomization	246
8.10 Blinding	249
8.11 Choice of Endpoints	250
8.12 Sample Size Estimation	251
8.13 Statistical Analysis	257
8.14 Personalized Medicine	265
8.15 Noninferiority Trials	266

8.16 Sources and Control of Bias	269
8.17 Generalization of Trial Results	270
8.18 Regulatory Issues	271
Questions to Discuss	273
References	274
9. Epidemiology	275
Dag S. Thelle <i>and</i> Petter Laake	
9.1 Introduction	275
9.2 The Definition of Epidemiology	276
9.3 The Role of Epidemiology	277
9.4 Target Population, Source Population, and Study Sample	278
9.5 Disease Occurrence, Risk, Association, Importance, and Implication	280
9.6 Epidemiological Study Designs	287
9.7 Effect Measures in Epidemiological Studies	294
9.8 Experimental Studies and Randomized Control Trials	302
9.9 Types and Sources of Error	302
9.10 Tests and Validity	305
9.11 Causes of Disease	309
9.12 Association Versus Causal Relationship	311
9.13 Causal Calculus	313
Question to Discuss	318
References	319
Further Reading	320
10. Qualitative Research Methods	321
Kåre Moen <i>and</i> Anne-Lise Middelthon	
10.1 Introduction	321
10.2 What Is Qualitative Research?	324
10.3 Doing Qualitative Research	333
10.4 What Is Qualitative Interviewing?	339
10.5 Doing Qualitative Interviewing	342
10.6 What Is Participant Observation?	347
10.7 Doing Participant Observation	351
10.8 Qualitative Data Analysis	355
10.9 Making Insights Portable and Applicable	367
10.10 The Quality of Qualitative Research	371
Questions to Discuss	375
References	376
Further Reading	378

11. Statistical Inference

379

Petter Laake and Morten Wang Fagerland

11.1	Introduction	379
11.2	Effect Estimate, Confidence Interval, and <i>P</i> -Value	380
11.3	Two Binomial Samples	383
11.4	Measures of Association in 2 × 2 Contingency Tables	384
11.5	Statistical Tests for Comparing Two Proportions	392
11.6	Normal Distribution	394
11.7	Comparison of Means	396
11.8	Nonparametric Methods	404
11.9	Linear Regression Analysis	410
11.10	Logistic Regression	415
11.11	Median Regression	420
11.12	Poisson Regression	423
11.13	Survival Analysis and Cox Regression	424
	Questions to Discuss	427
	References	430

12. Evidence-Based Medicine and Systematic Reviews

431

Morten Wang Fagerland

12.1	Introduction	431
12.2	The Five Elements of EBM	433
12.3	Introduction to Systematic Reviews	434
12.4	The Research Question	436
12.5	Search Strategy	438
12.6	Inclusion and Exclusion Criteria and the Selection of Primary Studies	438
12.7	Data Extraction from Included Studies	440
12.8	Study Characteristics	442
12.9	Methods to Assess Risk of Bias (Internal Validity) in the Included Studies	442
12.10	Methods to Estimate the Common Effect	444
12.11	Methods to Assess Heterogeneity	449
12.12	Methods to Assess Publication Bias	453
12.13	Additional Analyses	456
12.14	Systematic Reviews of Observational Studies	458
	Questions to Discuss	459
	References	459
	Further Reading	461

13. Scientific Communication	463
Haakon Breien Benestad	
13.1 Introduction	463
13.2 Scientific Papers	463
13.3 General Guidelines for Tables and Figures (Graphs)	476
13.4 The Finish	488
13.5 Posters	491
13.6 Some Final Points and Caveats	493
Questions to Discuss	497
References	498
Further Reading	498
14. Successful Lecturing	499
Heidi Kiil Blomhoff	
14.1 Introduction	499
14.2 Preparing the Lecture	500
14.3 Lecture Content and Form	502
14.4 Lecture Manuscript	508
14.5 Delivering a Lecture	510
Questions to Discuss	517
Further Reading	518
15. Guide to Grant Applications	519
Bjorn Reino Olsen, Petter Laake and Ole Petter Ottersen	
15.1 Introduction	519
15.2 Getting Started	520
15.3 The Postdoctoral Fellow and the Junior Scientist	522
15.4 What Goes into a Successful Grant Application?	527
15.5 Investigator-Initiated R01 NIH Grants	530
15.6 Multiproject Grants	533
15.7 Horizon 2020	536
15.8 International Research Collaborations	542
15.9 Summary and Perspective	545
Questions to Discuss	545
References	546
<i>Index</i>	547
