

CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<i>Acknowledgment</i>	<i>xix</i>
1. Epigenetic gene expression—an introduction	1
C. Ann Blakey and Michael D. Litt	
1. Introduction	1
2. Epigenetics	3
3. Future directions and challenges	8
4. Summary	13
Acknowledgments	16
References	16
2. Histone modifications—models and mechanisms	21
C. Ann Blakey and Michael D. Litt	
1. Introduction	21
2. Chromatin	22
3. The nucleosome	23
4. Histones and global mechanisms	25
5. Summary	38
Acknowledgments	38
References	38
3. Genomic imprinting in mammals—memories of generations past	43
Nora Engel	
1. Introduction	43
2. The life cycle of imprinted regions	44
3. Mechanisms of genomic imprinting	46
4. Top-down dissection of imprinted domains	49
5. Transcriptional interpretation of the imprint	50
6. Imprinting and human disease	52
7. Finding new imprinted genes	54
8. The evolution of imprinting	54
9. Conclusion	57
Acknowledgments	57
References	57

4. Polycomb and Trithorax factors in transcriptional and epigenetic regulation	63
Priscilla Nga Ieng Lau and Chi Wai Eric So	
1. Introduction	63
2. Regulators of homeotic genes—PcG and TrxG proteins	65
3. PcG-mediated gene repression	66
4. TrxG-mediated transcriptional regulation	73
5. Targeting of PcG/TrxG complexes to chromatin	80
6. Crosstalk with other PTMs	83
7. Regulation of PcG/TrxG function by upstream signaling pathways	84
8. Concluding remarks and future perspective	85
Acknowledgments	87
References	88
5. Chromatin dynamics and genome organization in development and disease	95
Changwang Deng, Bhavita Patel, Xiumei Lin, Yangqiu Li and Suming Huang	
1. Introduction	95
2. Technology advances in unraveling chromosome architecture and genome organization	96
3. Proteins involved in genome organization	99
4. Intra- and interchromosomal interactions during development	103
5. Intra- and interchromosomal interactions during carcinogenesis	105
6. Closing remarks and future directions	108
Acknowledgments	108
References	109
6. ncRNA function in chromatin organization	117
Keith E. Giles, Jessica L. Woolnough and Blake Atwood	
1. Introduction	117
2. Small ncRNAs	119
3. Long ncRNAs	127
4. Noncoding RNA-based gene regulation by allostery	139
5. Summary	141
References	142
7. Epigenetic gene regulation and stem cell function	149
Aissa Benyoucef and Marjorie Brand	
1. Introduction	150
2. The 3D nuclear architecture of stem cells	155
3. DNA methylation in stem cells	159

4. Histone modifications in stem cells	161
5. Conclusive remarks on the importance of epigenetic-based methods to optimize the use of stem and progenitor cells for regenerative medicine	170
Acknowledgments	171
References	171
8. Epigenetic inheritance	183
Benjamin B. Mills, Christine M. McBride and Nicole C. Riddle	
1. Introduction	183
2. Dynamics of epigenetic information throughout the life cycle	186
3. Epigenetic inheritance in ciliates	188
4. Epigenetic inheritance via DNA modifications	189
5. Epigenetic inheritance via histone modifications	191
6. Epigenetic inheritance through noncoding RNA	193
7. Prions	201
8. Unknown mechanism studies	201
9. Conclusions	203
Acknowledgments	204
References	204
9. Transgenerational epigenetic regulation by environmental factors in human diseases	209
Yuanyuan Li	
1. Introduction	209
2. Epigenetic regulations during early development	210
3. Environment and transgenerational epigenetic inheritance	212
4. Epigenetic diet and human diseases	213
5. Epigenetic inheritance of human diseases	217
6. Conclusions	218
Acknowledgments and funding	219
References	219
10. Identification of intergenic long noncoding RNA by deep sequencing	223
Gangqing Hu and Keji Zhao	
1. Introduction	223
2. An overview of methods for lncRNA detection	224
3. LincRNA identification based on RNA-seq	226
4. Regulation of lncRNA transcription	229
5. Future directions	230
Acknowledgments	232
References	232

11. Regulation of erythroid cell differentiation by transcription factors, chromatin structure alterations, and noncoding RNA	237
Alex Xiucheng Fan, Mir A. Hossain, Jared Stees, Ekaterina Gavrilova and Jörg Bungert	
1. Introduction	237
2. Erythroid cell differentiation	238
3. Hemoglobin	239
4. Heme synthesis	240
5. Red cell membrane	241
6. Regulation of gene expression during differentiation of erythroid cells	241
7. Conclusions	259
References	260
12. Genetically altered cancer epigenome	265
Ming Tang, Huacheng Luo and Jianrong Lu	
1. Introduction	266
2. Histone modifications	266
3. DNA methylation	272
4. Nucleosome remodeling	274
5. Genome organization	279
6. Concluding remarks	281
References	282
13. Long noncoding RNAs and carcinogenesis	291
Félix Recillas-Targa	
1. Introduction	291
2. General features and mechanisms of action of the long noncoding RNA	293
3. Different functional strategies of lncRNAs	296
4. The long noncoding RNAs in cancer	303
5. Concluding remarks and perspectives	307
Acknowledgments	308
References	308
14. Epigenetics of physiological and premature aging	313
Shrestha Ghosh and Zhongjun Zhou	
1. Introduction	313
2. Epigenetics in aging: a broad outlook	314
3. Epigenetic mechanisms	316
4. Epigenetic regulation of cellular senescence	329

5. Convergence and divergence of epigenetic alterations to cause or control aging	332
6. Epigenetics and drug development	333
7. Conclusions	333
References	334
15. Epigenetic effects of environment and diet	339
Jason O. Brant and Thomas P. Yang	
1. Introduction	339
2. Developmental origins of health and human disease	340
3. Epigenetic effects of environmental contaminants and toxins	341
4. Epigenetic effects of ethanol and tobacco exposure	348
5. Nutrition and DNA methylation	351
6. The Dutch famine	352
7. Maternal nutrition and fetal health	353
8. Folic acid and DNA methylation	356
9. Maternal nurturing and stress	357
References	359
16. Epigenetic control of stress-induced apoptosis	367
Lei Zhou	
1. Transcriptional regulation and apoptosis	367
2. Epigenetic control of proapoptotic genes during animal development	369
3. Epigenetic suppression of stress-responsive proapoptotic genes during tumorigenesis	372
4. Epigenetic regulation of anti-apoptotic genes	375
5. Epigenetics-based therapeutic strategies and derepression of proapoptotic genes	375
References	376
17. Structure, regulation, and function of TET family proteins	379
Xin Hu, Yun Chen and Zhizhuang Joe Zhao	
1. Introduction	379
2. Structure of TET2	380
3. Enzymatic activity of TET family enzymes	381
4. Specificity of TET2	382
5. Posttranslational modification of TET2 and its interaction with other proteins	383
6. Regulation of TET2 activity	383
7. Regulation of TET2 expression	384
8. Biological function of TET2	385
9. <i>TET2</i> gene mutations in hematological malignancies	387
10. <i>TET2</i> gene mutations and solid tumors	388
11. Cooperation of <i>TET2</i> gene mutation with other oncogenic mutations	388

12. <i>TET2</i> and <i>IDH1/2</i> gene mutations	389
13. Prognostic impact of <i>TET2</i> gene mutations	390
14. Conclusion	391
References	392
18. Epigenetic drugs for cancer therapy	397
Bowen Yan, Xuehui Li, Alta Johnson, Yurong Yang, Wei Jian and Yi Qiu	
1. Epigenetic pathways targeted for cancer therapy	397
2. Epigenetic drugs in clinic and clinical trials	404
3. Combined therapy	410
4. Closing remarks and future perspectives	412
References	415
List of acronyms and abbreviations	425
Glossary	445
Index	453
