

CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xiii</i>
1. The Nuclear Physique	1
Thoru Pederson	
1. Introduction: A Brief History of Biophysics	1
2. Biophysical Nucleus	5
Acknowledgments	11
References	11
2. The Crowded Nucleus	15
Ronald Hancock	
1. Introduction	15
2. Macromolecular Crowding in the Nucleus	16
3. Entropic (Depletion) Forces in the Nucleus	16
4. Compartmentalization in the Nucleus	18
5. Phase Separation in the Nucleus	20
6. Concluding Remarks	20
References	22
3. Crowding in Polymer-Nanoparticle Mixtures	27
Alan R. Denton	
1. Introduction	28
2. Models of Macromolecules: Polymers and Nanoparticles	32
3. Theoretical and Computational Methods	46
4. Response of Polymer Conformations to Nanoparticle Crowding	54
5. Concluding Remarks	65
Acknowledgments	66
References	66
4. Crowding-Induced Formation and Structural Alteration of Nuclear Compartments: Insights from Computer Simulations	73
Jun Soo Kim and Igal Szleifer	
1. Introduction	74
2. Structural Properties of Nuclear Compartments	74

3. Crowded Nature of Cell Nucleus	77
4. Structural Alterations of Chromosome Subcompartments by Macromolecular Crowding	85
5. Formation and Maintenance of NBs Influenced by Macromolecular Crowding	93
6. Concluding Remarks	104
Acknowledgments	105
References	105
5. Phase Separation as a Possible Means of Nuclear Compartmentalization	109
William M. Aumiller Jr., Bradley W. Davis, and Christine D. Keating	
1. Introduction	110
2. Macromolecule Solution Chemistry	113
3. Aqueous Phase Separation	118
4. Nuclear Compartments as Crowded and Dynamic Structures	122
5. Potential Functional Significance of Phase Separation for Nuclear Compartmentalization	126
6. Experimental Model Systems for Crowded, Phase-Separated Microcompartments	129
7. Looking Forward	142
Acknowledgment	143
References	143
6. Formation of Multiprotein Assemblies in the Nucleus: The Spindle Assembly Checkpoint	151
Victor M. Bolanos-Garcia	
1. Introduction	152
2. SAC Signaling	153
3. Disorder-to-Order Transitions	158
4. Macromolecular Crowding of Nuclear Proteins	161
5. Cooperative Interactions of Nuclear Multiprotein Complexes	165
6. Concluding Remarks	167
References	167
7. Characteristic Behavior of Crowding Macromolecules Confined in Cell-Sized Droplets	175
Miho Yanagisawa, Takahiro Sakaue, and Kenichi Yoshikawa	
1. Introduction	176
2. Confinement of Long DNA Molecules in Droplets	179

3. Cross-Talk of DNA with Other Semiflexible Polymers	185
4. Gene Expression in Cell-Sized Droplets	193
5. From Cell-Sized Droplet in Oil Phase to Liposome in Aqueous Phase	198
6. Concluding Remarks	200
References	201
8. Noncanonical Structures and Their Thermodynamics of DNA and RNA Under Molecular Crowding: Beyond the Watson-Crick Double Helix	205
Naoki Sugimoto	
1. Introduction	206
2. Thermodynamic Studies on Nucleic Acids	209
3. Molecular Crowding Effects on the Canonical Structures of Nucleic Acids	212
4. Molecular Crowding Effects on Noncanonical Structures of Nucleic Acids	216
5. Molecular Crowding Effects on Functional RNAs	226
6. Molecular Crowding Effects Under Extreme Environments	232
7. Molecular Crowding Effects on Transcription and Translation	242
8. Perspectives	257
Acknowledgments	258
References	258
9. Computational Models of Large-Scale Genome Architecture	275
Angelo Rosa and Christophe Zimmer	
1. Introduction	276
2. Direct Models of Genome Architecture	279
3. Inverse Models of Genome Architecture	311
4. Concluding Remarks	330
Acknowledgments	344
References	344
10. How Chromatin Looping and Nuclear Envelope Attachment Affect Genome Organization in Eukaryotic Cell Nuclei	351
Hansjoerg Jerabek and Dieter W. Heermann	
1. Introduction	352
2. The Model	359
3. Results	364
4. Perspectives	378
Acknowledgments	379
References	379

11. Crowding, Diffusion, and Biochemical Reactions	383
Matthias Weiss	
1. Introduction	384
2. Diffusion and Random Walks	385
3. Quantifying Diffusion in Living Cells	395
4. Diffusion as a Driving Force for Biochemical Reactions	406
5. Concluding Remarks	413
References	413
12. Importance of Crowding in Signaling, Genetic, and Metabolic Networks	419
Pieter Rein ten Wolde and Andrew Mugler	
1. Introduction	420
2. Diffusion of Transcription Factors Can Increase Noise in Gene Expression	421
3. Diffusion Between Compartments Can Reduce Protein Concentration Fluctuations	423
4. Crowding Can Enhance Information Transmission by Removing Correlations	425
5. Crowding Can Promote Membrane Rebinding, Which Can Enhance Downstream Signal Propagation	427
6. Crowding Can Qualitatively Change the Response of Biochemical Networks	429
7. Diffusion Can Affect Metabolic Flux	433
8. How to Model Biochemical Networks in the Presence of Crowding	435
9. Effect of Crowding: Diffusion or Entropy?	436
10. Perspectives	438
Acknowledgments	438
References	438
13. Relevance and Limitations of Crowding, Fractal, and Polymer Models to Describe Nuclear Architecture	443
Sébastien Huet, Christophe Lavelle, Hubert Ranchon, Pascal Carrivain, Jean-Marc Victor, and Aurélien Bancaud	
1. Introduction	444
2. First Glance at Methods to Investigate Nuclear Organization	447
3. Molecular Crowding	448
4. Fractal Models	456
5. Polymer Models for Chromosomes	459
6. Evaluating Chromosome Structural Properties with Combined Techniques	462

7. Uniformity of Chromatin Mechanical Parameters	467
8. Concluding Remarks	468
Acknowledgments	470
References	470
