1. Revisiting Dengue Virus–Host Cell Interaction: New Insights into Molecular and Cellular Virology	1
Eliana G. Acosta, Anil Kumar, and Ralf Bartenschlager	
1. Introduction	2
2. Dengue Disease	3
3. The Molecular Biology of DENV	7
4. The DENV–Host Cell Interface: High-Throughput Approaches to Identify Relevant Host Cell Factors and Pathways	26
5. Host Dependency Factors and Their Role in the DENV Replication Cycle	35
6. Host Restriction Factors and Their Role in the DENV Replication Cycle	67
7. Host Cell Factors as Target for Antiviral Agents	77
8. Concluding Remarks	80
Acknowledgments	81
References	81
2. KSHV: Pathways to Tumorigenesis and Persistent Infection	111
Louise Giffin and Blossom Damania	
1. Malignancies and Syndromes Linked with KSHV Infection	112
2. KSHV Biology: Virion, Transmission, and Viral Lifecycle	118
3. Lytic KSHV Proteins Involved in Cell Growth and Survival	126
4. KSHV's Activation and Evasion of the Host Immune Response	131
5. Conclusions	139
Acknowledgments	139
References	139
3. Evolution and Emergence of Plant Viruses	161
Santiago F. Elena, Aurora Fraile, and Fernando García-Arenal	
1. Introduction	162
2. Phase I: Virus Encounter of New Hosts or New Conditions	163
3. Phase II: Virus Adaptation to a New Host or New Conditions	170
4. Phase III: Long-Term Changes in Virus Epidemiology	179
5. Conclusions: Gaps in Understanding Plant Virus Emergence	183

Acknowledgments	184
References	184
4. Quantitative Genetics in the Study of Virus-Induced Disease	193
Martin T. Ferris and Mark T. Heise	
1. Background	194
2. Approaches to Genetic Mapping	195
3. Genetic Mapping of Viral Disease Related Genes Within the Human Population	198
4. Experimental Approaches to Studying Host Genetic Influences on Viral Diseases	203
5. The Collaborative Cross as an Integrative Genetic Mapping and Systems Biology Platform	209
6. Looking Forward	211
Acknowledgments	214
References	214
5. Bacteriophages of <i>Pseudomonas aeruginosa</i>: Long-Term Prospects for Use in Phage Therapy	227
Victor N. Krylov	
1. Introduction	228
2. Conditions Predisposing to <i>P. aeruginosa</i> Infection. Phage Therapy in Treatment of <i>P. aeruginosa</i> Infections: General Approach	230
3. Classification and Safety Certification of Phages for Therapy	233
4. Phage Potential of <i>P. aeruginosa</i> : Significance of Genetic Interactions in Course of Possible Migrations of Phages	237
5. Selection of the Most Active Phages to Compose Mixtures. Expansion of the Number of Available Therapeutic Phages for <i>P. aeruginosa</i>	248
6. <i>P. aeruginosa</i> Bacteriophages and CF	258
7. Future Studies and Organizational Procedures to Support Long-Term Use of <i>P. aeruginosa</i> Phages in Therapy	263
Acknowledgments	268
References	268
6. Dynamic Epstein-Barr Virus Gene Expression on the Path to B-Cell Transformation	279
Alexander M. Price and Micah A. Luftig	
1. Background	280
2. Virion-Associated RNAs and Very Early Events in Infection	284

3. Viral Gene Expression During the Prelatent Phase Early After Infection	286
4. miRNAs and Other Noncoding RNAs Involved in Transformation	292
5. Dynamic Control of Viral Promoters Leads to Specificity of Latent Gene Expression	294
6. Delayed Expression of LMP1 Ultimately Required for Transformation	297
7. Heterogeneity in Steady-State EBV Gene Expression in LCLs	299
8. Conclusions and Future Directions	300
Acknowledgments	303
References	304
7. Dengue Virus Vaccine Development	315
Lauren E. Yauch and Sujana Shrestha	
1. Virology and Epidemiology of DENV Infection	316
2. Adaptive Immune Response to DENV	317
3. Dengue Vaccine Objectives and Challenges	320
4. Animal Models for Testing Dengue Vaccine Candidates	323
5. Dengue Vaccine Approaches	325
6. DNA Vaccines	329
7. Viral Vectored Vaccines	333
8. Inactivated Whole Virus	336
9. Live Attenuated	339
10. Moving Forward	355
References	357
Index	373
