vii

1. Opportunity for Selection in Human Health	1
Diddahally R. Govindaraju	
1. Introduction	2
2. Genetic Variation and Demographic Selection	8
3. Episodes of Selection	15
4. Selection Spectra	29
5. Place of Multilevel Selection in Medical Practice and Public Health	43
6. Discussion	51
Acknowledgments	55
References	55
2. Clinical Applications Involving CNS Gene Transfer	71
Boris Kantor, Thomas McCown, Paola Leone, Steven J. Gray	
1. Introduction	72
2. CNS Clinical Trials Utilizing Retroviral Vectors	75
3. CNS Clinical Trials Utilizing AAV Vectors	92
4. Lessons Learned from Related Studies	108
5. Conclusion	110
References	111
3. Methods for Gene Transfer to the Central Nervous System	125
Boris Kantor, Rachel M. Bailey, Keon Wimberly, Sahana N. Kalburgi, Steven J. Gray	
1. Introduction	126
2. Vectors for CNS Gene Transfer	127
3. Genome Designs for Optimal Expressions	168
4. Conclusions	177
References	178
4. The Filamentous Fungus <i>Sordaria macrospora</i> as a Genetic Model to Study Fruiting Body Development	199
Ines Teichert, Minou Nowrousian, Stefanie Pöggeler, Ulrich Kück	
1. Introduction	200
2. Genetic and Genomic Tools	202

3. The Striatin-Interacting Phosphatase and Kinase Complex, a Multisubunit Protein Complex Governing Fruiting Body Development	210
4. Chromatin-Related Processes	214
5. Metabolism-Related Developmental Processes	218
6. Autophagy	227
7. Concluding Remarks and Outlook	233
Acknowledgments	234
References	234
5. Genetics of Alzheimer's Disease	245
Vincent Chouraki, Sudha Seshadri	
1. Introduction	246
2. Heritability of Alzheimer's Disease	248
3. Genetic Causes of Early-Onset Alzheimer's Disease	249
4. Genetic Risk Factors for Late-Onset Alzheimer's Disease	251
5. Discussion	275
References	278
